PHARMACY BOARD :— Report for 1899, laid on Table, 40.		
PIDDINGTON, WILLIAM HENRY BURGESS, ESQUIRE :— Resignation of, as Member for Uralla-Walcha reported, 1; return of Writ, certifying to election of, reported, Mr. Piddington sworn, 6. Death of, reported, and seat declared vacant, 357. Motion expressing regret at the death of, 357.		
PIKE, ARREST OF (See "POLICE").		
PITT-STREET (See "TRAMWAYS").		
PLAGUE (See "BUBONIC PLAGUE").		
POINTS OF ORDER :— Reported from Committee of Supply, 58, 435. Reported from Committee of the Whole, 266.		
RULINGS OF SPEAKER :— That a Temporary Chairman of Committees could take the Chair, notwithstanding that the Chairman of Committees had not been appointed, 49. That debate in Committee of Supply on items in Resolution for specific services must be confined to the items submitted, 58. That the provision in clause 4 of the Darling Harbour Wharves Resumption Bill, giving power to lease or sell certain of the land, was covered by the Title and Order of Leave; Speaker quoted decision of 17th August, 1897, in reference to the Totalisator Bill, 83. That amendment, for Call of the House, on a motion proposing a new Standing Order, could be admitted, 127. That sections 12 and 13 of the Public Works Act had been complied with by the Minister in moving motion to refer the matter of removing the Public Abattoirs from Glebe Island, to the Public Works Committee, 223. That an amendment to insert words "The Sydney Harbour Trust Commissioners" in clause 2 of the Industrial Arbitration Bill, before the Commissioners were appointed, was in order, 266. That the subject of the motion for the adjournment of the House in reference to land exchanges had not been discussed on a previous motion, 286. That the Fire Brigades Bill was out of order, because clause 25 conflicted with, and was contradictory of clause 65 of the Sydney Harbour Trust Bill, passed by this House, and now before the Council, 306. That the provision in the Racing Association Bill in regard to incorporation was not beyond the Order of Leave, and that the Bill did not require to be introduced in Committee, 318. That provision in clause 7 of the Early Closing Amendment Bill, which proposes to bring hotels, &c., selling tobacco, under the same law as tobacconists' shops was within the Order of Leave, 325. That proposal to put the motion for the adjournment of the House without debate on Friday sittings was not a contravention of the Standing Orders which gave the right to Members to debate such questions, 367. That although the Public Works Committee had varied the reference made to them in reference to the proposal to construct the Belmore to Fort Macquarie Electric Tramway, he would not rule the motion to carry out the work out of order, 367. That motion for adjournment of House in reference to thoroughfare for vehicular traffic through the Botanical Gardens, could be discussed in the financial debate in Committee of Ways and Means, and was out of order, 392. That as the Order of the Day was the property of the House, the second reading of the Tied Houses Bill could be moved by any Member, 409. That an Honorable Member discussing in Committee of Supply the estimate for "Railways and Tramways—Existing Lines—Working Expenses," was not in order in commenting in detail on a report of an officer on a new line of railway, 435-6. That a Minister was permitted to present papers to Parliament at any time, notwithstanding an address passed by the House requesting the production of the papers, had not been presented to the Governor, 441. That the introduction of the Patents and Trade Marks Bill should have been preceded by a Message from the Governor, 460.

<b>P</b>		
<b>POINTS OF ORDER</b> ( <i>continued</i> ):—		
<b>RULINGS OF SPEAKER</b> ( <i>continued</i> ):—		
That the motion for the adjournment of the House in reference to the Police Superannuation Fund anticipated the discussion of a motion which was already on the paper, and was out of order, 522.		
That the Federal Elections Bill was not out of order, notwithstanding the Schedule referred to in Clause 6 was not given, as the Schedules could be introduced and discussed in Committee, 541.		
That motion for adjournment on influence of Members with Federal Electorates Commissioners anticipated discussion on the Federal Elections Bill, and was out of order, 549.		
That motion approving of Government entering into a contract for the supply of steel rails should have originated in Committee of the Whole, and was out of order, 549.		
That motion for adjournment of the House in reference to contract for steel-rails anticipated the discussion of a motion given this day on the subject, and was out of order, 557.		
That in regard to the motion of adjournment in reference to consumptive patients, Liverpool Asylum, having been already discussed in Committee of Supply and being open to further discussion on the third reading of the Appropriation Bill, he thought that the item could not be discussed on the third reading of the Appropriation Bill, and he had not sufficient information as to the proceedings in supply to rule the motion out of order, 577.		
<b>RULINGS OF DEPUTY-SPEAKER</b> :—		
That motion for adjournment of House in reference to legalising certain Municipalities did not deal with the subject embodied in the Municipalities (Amendment) Bill, and was in order, 610.		
That certain clauses in the Municipalities (Incorporation Validating) Bill was not beyond the Order of Leave, 610.		
That the requirements of the Public Works Act had been complied with on motion to refer the work "High-level Bridge over the Hawkesbury River at Richmond" to the Public Works Committee, 615.

Lays on Table Election Petition—Taylor v. Smith, Canterbury, 91.			
Clerk informs House of unavoidable absence of, and Deputy-Speaker took Chair, 597, 607.			
RULINGS OF :—			
That a Temporary Chairman of Committees could take the Chair notwithstanding the Chairman of Committees had not been appointed, 49.			
That Debate in Committee of Supply on items in resolution for specific services must be confined to the items submitted, 58.			
That the provision in clause 4 of the Darling Harbour Wharves Resumption Bill, giving power to lease or sell certain of the land, was covered by the Title and Order of Leave; Speaker quoted decision of 17th August, 1897, in reference to the Totalizator Bill, 83.			
That amendment, for call of the House, on a motion proposing a new Standing Order, could be admitted, 127.			
That sections 12 and 13 of the Public Works Act had been complied with by the Minister, in moving motion to refer the matter of removing the Public Abattoirs from Glebe Island, to the Public Works Committee, 223.			
That an amendment to insert words "The Sydney Harbour Trust Commissioners" in clause 2 of the Industrial Arbitration Bill, before the Commissioners were appointed, was in order, 266.			
That the subject of the motion for the adjournment of the House in reference to land exchanges had not been discussed on a previous motion, 286.			
That the Fire Brigades Bill was out of order, because clause 25 conflicted with and was contradictory of clause 65 of the Sydney Harbour Trust Bill passed by this House and now before the Council, 306.

<b>S</b>		
<p><b>SPEAKER (continued):—</b>  <b>RULINGS OF—continued:—</b>  That the provision in the Racing Association Bill in regard to incorporation was not beyond the Order of Leave, and that the Bill did not require to be introduced in Committee, 318.  That provision in clause 7 of the Early Closing Amendment Bill, which proposes to bring hotels, &amp;c., selling tobacco, under the same law as tobacconists' shops, was within the Order of Leave, 325.  That proposal to put the motion for the adjournment of the House without debate on Friday sittings was not a contravention of the Standing Orders which gave the right to members to debate such questions, 367.  That although the Public Works Committee had varied the reference made to them in reference to the proposal to construct the Belmore to Port Macquarie Electric Tramway, he would not rule the motion to carry out the work out of order, 367.  That motion for adjournment of House in reference to thoroughfare for vehicular traffic, through the Botanical Gardens, could be discussed in the financial debate in Committee of Ways and Means, and was out of order, 392.  That as the Order of the Day was the property of the House, the 2nd reading of the Tied Houses Bill could be moved by any member, 409.  That an honorable member, discussing in Committee of Supply the estimate for "Railways and Tramways, existing lines—working Expenses," was not in order in commenting in detail on a report of an officer on a new line of railway, 435-6.  That a Minister was permitted to present papers to Parliament at any time, notwithstanding an address passed by the House requesting the production of the papers, had not been presented to the Governor, 441.  That the introduction of the Patents and Trade Marks Bill should have been preceded by a Message from the Governor, 460.  That the motion for the adjournment of the House in reference to the Police Superannuation Fund anticipated the discussion of a motion which was already on the paper, and was out of order, 522.  That the Federal Elections Bill was not out of order, notwithstanding the Schedule referred to in clause 6 was not given, as the Schedules could be introduced and discussed in Committee, 541.  That motion for adjournment on "Influence of Members with Federal Electorates Commissioners," anticipated discussion on the Federal Elections Bill, and was out of order, 549.  That motion approving of Government entering into a contract for the supply of steel rails should have originated in Committee of the Whole and was out of order, 549.  That motion for adjournment of the House in reference to "Contract for Steel-rails" anticipated the discussion of a motion given this day on the subject, and was out of order, 557.  That in regard to the motion of adjournment in reference to "Consumptive Patients Liverpool Asylum, having been already discussed in Committee of Supply, and being open to further discussion on the third reading of the Appropriation Bill," he thought that the item could not be discussed on the third reading of the Appropriation Bill, and he had not sufficient information as to the proceedings in Supply to rule the motion out of order, 577.</p> <p><b>RULINGS OF DEPUTY-SPEAKER:—</b>  That motion for adjournment of the House in reference to legalising certain Municipalities did not deal with the subject embodied in the Municipalities (Amendment) Bill, and was in order, 610.  That certain clauses in the Municipalities (Incorporation Validating) Bill was not beyond the Order of Leave, 610.  That the requirements of the Public Works Act had been complied with on motion to refer the work "High-level Bridge over the Hawkesbury River at Richmond" to the Public Works Committee, 615.</p> <p><b>DISSENT TO RULING:—</b>  Motion made (<i>Mr. Norton</i>) That House dissents from ruling in reference to Early Closing (Amendment) Bill, 339.</p> <p><b>SPECIAL ADJOURNMENT</b> (See "ADJOURNMENT").  <b>SPECIAL REPORT</b> (See "REPORTS").  <b>SPORTS GROUND, ALBURY</b> (See "CROWN LANDS").  <b>SPRINGWOOD</b> (See "POSTAL"; also "TELEGRAPHS").  <b>STAMP DUTIES ACT, 1898:—</b>  Regulations and Forms, laid on Table, 40.  <b>STAMP DUTIES AMENDMENT BILL:—</b>  Message from Governor, 435; Motion made (<i>Sir William Lyne</i>) for Committee of the Whole, 442; House in Committee, Resolution agreed to, Bill presented and read 1<sup>o</sup>, 455; read 2<sup>o</sup>, committed, reported without amendment, Report adopted, 475; read 3<sup>o</sup>, passed, and sent to Council, 482; returned without amendment, 507; Assent reported, 519.</p> <p><b>STANDARD DRAW-GEAR</b> (See "RAILWAYS").  <b>STANDING ORDERS:—</b>  Sessional Order appointing Committee, passed, 29.  Suspended to pass Consolidated Revenue Fund Bill through all stages in one day, 58, 159, 258, 373.  Motion made for, in reference to Limitation of Debate, and subject referred to Standing Orders Committee, 127; Report brought up, 137 ..... 1 777  Suspended, to take business as matter of urgency, 152.  Suspended to pass Bills through remaining stages at end of Session, 585 (1<sup>o</sup>), 602 (2<sup>o</sup>), 610.</p> <p><b>STANFORD COAL-MINE RAILWAY BILL:—</b>  Petition presented (<i>Mr. Gillies</i>) for leave to proceed with, under the 409th Standing Order, 14; Bill read 2<sup>o</sup>, committed, reported with amendments, Report adopted, 49-50; read 3<sup>o</sup>, passed, and sent to Council, 57; returned without amendment, 125; Assent reported, 152.</p> <p><b>STATE CHILDREN RELIEF BOARD:—</b>  Report of President for year ended 5th April, 1900, laid on Table, 316 ..... 6 373</p> <p><b>STATE PARLIAMENT</b> (See "PARLIAMENT").  <b>STATISTICS</b> (See "CENSUS OF AUSTRALASIA"; also "CENSUS BILL").  <b>STATUTORY RULES PUBLICATION BILL:—</b>  Message from Governor, 45; Motion made (<i>Sir William Lyne</i>) for Committee of the Whole, 83.</p> <p><b>STEEL RAILS</b> (See "RAILWAYS").  <b>STEPHENS, MR. THEOPHILUS</b> (See "PUBLIC SERVICE").</p>

# ANNUAL MINING REPORT

OF THE

## DEPARTMENT OF MINES AND AGRICULTURE.

---

To The Honorable John L. Fegan, Esq., M.P., Minister for Mines and Agriculture,  
&c., &c.

Sir,

I do myself the honor to submit the following report upon the working of that division of the Department under your control which deals with mining interests, also the progress of mining and the results obtained during the year 1899.

It affords me much pleasure to again bear testimony to the commendable zeal and ability with which the officers as a whole perform their duties. Whenever, through pressure of public business, an exigency has arisen they have always cheerfully and willingly responded to the occasion and endeavoured to meet it by working beyond the ordinary office hours; and I gladly take advantage of this opportunity to acknowledge, with thanks, the readiness with which these gentlemen have assisted me in the work of the Department. To the Chief Clerk, and to the heads of branches generally, I am especially indebted for the valuable aid and co-operation they have at all times given me in the fulfilment of the multifarious duties of my office.

It is with sincere regret I have to record the death of Mr. D. H. McCulloch which took place, after a very brief illness, whilst this Report was in course of preparation for the press. Mr. McCulloch was for many years Secretary to the Prospecting Board, and has for years past rendered valuable assistance also in the preparation of the Annual Mining Report. His genial disposition and sterling personal qualities made him a general favourite in this Department which, through his death, is deprived of a most energetic, hardworking, and capable officer.

### MINERAL PRODUCTS.

The aggregate value of the mineral products of the Colony to the end of 1899 is estimated to be £134,064,712 4s. 9d. The value of such products for the year 1899 was £6,157,557 7s. 6d., being no less than £1,290,559 10s. 11d. in excess of the value of the minerals won during the year preceding.

A substantial increase on the previous year's figures is exhibited by the following comparative table, in the output value of every one of the main products of the Colony. The largest increases are in gold, silver-lead and silver, and in copper; but noticeable increase is also shown in the output values of opal, coal, tin, lead, and zinc. The total decrease in the output of those products which show a decrease amounts, only, to some £14,000, and nearly four-fifths of this sum is accounted for by the reduced values of the outputs of alunite and limestone flux. In the former case the decrease is explained by the fact that the operations of the Alum Company were impeded by the high freights which ruled through the greater part of the year, as it appears the Company can only ship its product profitably when low freight is obtainable; in the case of the latter mineral, the decrease is due to the closing of the Tarrawingie Flux Company's quarries at Broken Hill, consequent upon the removal of the smelting works to Port Pirie.

For some years past the important coal-mining and growing opal-mining industries of the Colony have both shown a steady advance in the values of their annual outputs; and it is pleasing to note that the operations of the year under review evidence their progress to be still continuous. The marked improvement which took place during the year in the state of the metal market was indubitably responsible,

to an extent, for the increased value of the copper and tin outputs. This is most notable in the case of the latter, which shows an increase of £37,828 in output value, though there is actually a decrease in the quantity shown as the year's product—an apparent falling off attributable to the circumstance, that the tin refined in this Colony from imported ores has not this year been included. The large increase in our gold production, notwithstanding the long-continued drought, is most gratifying ; and is the result, mainly, of capital having been attracted to the development of our extensive gold resources, and to the adoption of improved methods and appliances, both in gold-mining and gold-saving.

The following table shows the aggregate value of minerals, the product of New South Wales, for the years 1898 and 1899, respectively, compared :—

Minerals.	1898.		1899.		Increase in Value.	Decrease in Value.

\* Exclusive of a large quantity of copper (ingots and matte) produced in this Colony, during the year, from ore imported for treatment from other Australian colonies and New Caledonia.      † For the greater convenience of the public, this Department has latterly published the yield for each month (instead of quarterly, as formerly) based on returns kindly furnished for that purpose by the Mint and Customs authorities ; and the total yield for the year, based on these monthly returns, has also already been made public. A later return from the Customs, however, unfortunately disclosed the fact that some gold imported from New Zealand, for transhipment, had inadvertently been included in the monthly returns of exports furnished this Department, and this has necessitated an adjustment of the figures previously published.      ‡ Rolled scrap iron.      § The bulk of the silver produced is exported in the shape of silver-lead.      ¶ Exclusive of tin refined in this Colony from imported ores.      ¶ Inclusive of wolfram and scheelite to the value of £3,710.

The following return shows the quantity and value of the several metals and minerals produced in the Colony of New South Wales during the last ten years:—

Minerals.	1890.		1891.		1892.		1893.

† Includes Silver-sulphide ; for details see Summary, p. 81.

LEASE BRANCH

MINING ON PRIVATE LANDS.

The number of applications for "Special" or "Owners" leases lodged in terms of section 25 of the Mining on Private Lands Act of 1894, during the year ending 31st December, 1899, was 232, covering an area of 10,072 acres 1 rood 36 perches

The number of general leases (other than by owners of the land) applied for during the same period was 161, covering an area of 2,279 acres 3 roods 20 perches.

The total number of applications lodged during the year was 393.

The aggregate area applied for was 12,352 acres 1 rood 16 perches, as under —

To mine for gold . . . . .	301 applications	a.	r	p.
" " silver . . . . .	1	8,300	1	20
" " silver and lead . . . . .	2	41	1	0
" " tin . . . . .	64	100	0	0
" " diamonds (outside the scope of the Act) . . . . .	1	3,773	0	0
		12,254	2	20
Machinery sites, &c . . . . .	24	97	2	36
		12,352	1	16

During the year 167 applications were dealt with covering an area of 2,907 acres 2 roods 27 perches. Of this number 119 were approved and 48 were refused.

Of the number approved 48 were for special leases and 71 were for ordinary or general leases.

The special lease applications approved covered an area of 1,024 acres 2 roods 35 perches, as under —

For gold ..	a	r	p.
" silver .	471	1	35
" tin .	61	1	0
" machinery sites, &c .	470	0	0
	22	0	0
	1,024	2	35

The remainder of the number approved, viz, 71, covered an area of 639 acres 3 roods 20 perches as under —

For gold . . . . .	a	r	p.
" silver . . . . .	541	3	28
" silver and gold . . . . .	24	1	0
" tin . . . . .	12	2	4
" machinery sites, &c . . . . .	40	0	0
	21	0	28
	639	3	20

Of the balance of the applications dealt with, viz, 48, refused for various reasons, 31 were for special leases, and 17 were for general leases

The 31 special lease applications refused covered an area of 933 acres 0 roods 12 perches, as under —

Gold . . . . .	a	r	p.

Tin . . . . .	40	0	0
Diamonds . . . . .	490	0	0
Machinery areas . . . . .	40	0	0
	11	0	0
	933	0	12

The 17 applications for general leases refused covered an area of 310 acres, as under —

Gold . . . . .	a	r	p.
Silver . . . . .	293	2	0
Machinery sites, &c . . . . .	10	0	0
	6	2	0
	310	0	0

In 1898—	a	r	p.
71 special leases were applied for covering	24,224	1	24½
69 general leases " " . . . . .	589	1	35
140	24,813	3	19½

In 1899—	a	r	p.
232 special leases were applied for covering	10,072	1	36
161 general leases " " . . . . .	2,279	3	20
393	12,352	1	16

It will thus be seen that although the area of land covered by applications for leases was much less than in the previous year the number of applications made exceeded those of the previous year by 253  
During

During the year 56 agreements or leases sought to be made between the owners of private lands and miners were submitted for your concurrence in terms of the 11th section of the Mining Laws Amendment Act of 1896. To several of these your concurrence could not be given, the land being alluvial and, therefore, exempt from the operation of that part of the Act. In some cases the agreements submitted were not in such form as could be concurred in; but when the documents were returned to the parties for necessary amendments the leases were apparently abandoned, or other arrangements had been made, as the documents were not re-submitted. However, in some 23 of these agreements or leases your concurrence was given, and registration was afterwards effected in accordance with the Act. During the preceding year 35 agreements were sent in, but 20 were concurred in.

Besides these agreements or leases, some 88 agreements to mine have been made by owners of land and the holders of miners' rights and mineral licenses, and have been registered in terms of section 33 of the Mining on Private Lands Act of 1894. During the previous year 70 such agreements were registered.

During the year 829 authorities were granted, in terms of the Mining on Private Lands Laws, by the District Wardens to enter and prospect on private lands, embracing an aggregate area of 10,923 acres 3 roods 32 perches, as under :—

	a.	r.	p.
763 gold.....	8,713	3	32
9 silver .....	425	0	0
3 gold and silver .....	55	0	0
24 silver and lead .....	798	0	0
1 silver and tin .....	5	0	0
27 tin .....	877	0	0
1 silver and antimony .....	30	0	0
1 antimony .....	20	0	0
829	10,923	3	32

During 1898, 491 such authorities were granted, for an aggregate area of 4,478 acres. The last year shows an increase over the former year by 338 authorities, covering an increased area of 6,445 acres 3 roods 32 perches.

The foregoing tables show a very large increase in the business of the Department under the Mining on Private Lands Laws. The area embraced by applications for special leases was not so large as in the previous year, but this is accounted for by smaller areas being covered by the individual applications.

I desire here to point out that the anticipations mentioned in my reports for the years 1897 and 1898, viz., that the privileges conferred on the mining community by the Mining Laws Amendment Act of 1896, under which private lands are more readily open to the operation of the Mining on Private Lands Laws can be entered upon and prospected, would be very largely availed of when the mining community became aware of them, are fully borne out by the returns of such authorities taken out since the date of the Act, and the applications for general leases made in pursuance of them.

In 1897—	acres.
578 authorities were issued, covering.....	7,268
In 1898—	
491     "     "     "     .....	4,478
In 1899—	
829     "     "     "     .....	10,923

It is also most satisfactory to note the very considerable increase in the number of applications for general leases on private lands during the last year over the previous corresponding period, viz. :—

1898—	a.	r.	p.
69 general leases, covering .....	589	1	35
1899—			
161     "     "     "     .....	2,279	3	20

Especially in view of the fact that these leases are made in pursuance of authorities to enter and prospect, as it may be fairly assumed that in the great majority of cases the land is prospected under the authorities, and it is in those cases where the prospecting has proved the land to be, for mining purposes, worth the outlay that the application for lease is made, and the necessary expenses in applying for leases incurred.

The foregoing proves the utility of the amendments to the original Mining on Private Lands Act, and is evidence of the manner in which the privileges thereunder are being availed of by the mining community.

MINING ON CROWN LANDS.

With regard to the acquisition of Crown lands (including reserved Crown lands) for mining purposes, the number of applications made for leases other than special leases for dredging during the year ending 31st December, 1899, was 1,576, for an aggregate area of 36,730 acres 3 roods 0¼ perches. Of these, 754 applications were for leases for mining for gold, covering 5,574 acres 3 roods 15¼ perches, and the remaining 822 applications were for leases to mine for various minerals, covering 31,155 acres 3 roods 25 perches.

The number of leases dealt with during the year 1899 was 1,252, covering 25,237 acres 2 roods 11 perches. Of these, 664 applications were for mining for gold, covering 4,306 acres 1 rood 28 perches ; and the remaining 588 applications were for mining for minerals, covering 20,931 acres 0 roods 23 perches.

The following table shows the number of applications for leases of Crown lands for mining purposes made and dealt with during the years 1898 and 1899 respectively compared :—

In 1898—			a.	r.	p.
811 applications were made for gold-mining leases, covering.....	211	"	4,737	1	1½
"	"	"	10,320	2	37½

In 1899—			a.	r.	p.
754 applications were made for gold-mining leases, covering .....	822	"	5,574	3	15¼
"	"	"	31,155	3	25
1,576			36,730	3	0¼
In 1898—			a.	r.	p.
974 applications were dealt with for gold-mining leases, covering .....	217	"	5,849	3	0½
"	"	"	13,303	3	20
1,191			19,153	2	20½
In 1899—			a.	r.	p.
664 applications were dealt with for gold-mining leases, covering .....	588	"	4,306	1	28
"	"	"	20,931	0	23
1,252			25,237	2	11

The following table shows the areas applied for during the year ending 31st December, 1899, and the minerals and metals to be mined :—

	a.	r.	p.		a.	r.	p.
Gold .....	5,574	3	15¼	Silver, tin, and lead .....	40	0	0
Antimony .....	80	0	0	Silver, lead, and iron .....	40	0	0
Coal .....	1,091	1	35	Silver, lead, and copper.....	3,511	1	36
Coal and shale .....	640	0	0	Silver, lead, and zinc .....	91	3	8
Chrome .....	43	3	0	Silver, lead, and arsenic.....	20	0	0
Cinnabar .....	240	0	0	Silver, lead, tin, and antimony .....	80	0	0
Cobalt .....	10	0	0	Silver, lead, tin, and copper.....	562	0	0
Copper .....	4,519	0	0	Silver, lead, copper, and zinc .....	56	3	6
Copper and zinc .....	40	0	0	Silver, lead, tin, and diamonds .....	40	0	0
Copper, tin, bismuth, and antimony...	120	0	0	Silver, tin, diamonds, and copper.....	20	0	0
Copper, tin, and lead .....	80	0	0	Silver, tin, diamonds, copper, and lead .....	40	0	0
Copper, silver, and iron.....	79	2	0	Silver, lead, and antimony .....	40	0	0
Copper, silver, lead, and diamonds...	20	0	0	Scheelite .....	100	0	0
Diamonds .....	1,602	3	32	Tin .....	11,501	1	10
Ironstone .....	100	0	0	Tin and diamonds .....	2,908	0	0
Limestone .....	100	0	0	Tin and copper.....	40	0	0
Manganese .....	60	0	0	Tungsten .....	80	0	0
Silver .....	242	0	0	Wolfram .....	160	0	0
Silver and copper.....	885	0	0				
Silver and lead .....	1,790	3	18		36,730	3	0¼
Silver and tin .....	80	0	0				

The areas held under applications for leases which had not received the approval of the Governor-in-Council on 31st December, 1899, were :—

	a.	r.	p.		a.	r.	p.
Gold .....	1,215	0	37	Silver, lead, and copper.....	980	0	0
Antimony .....	40	0	0	Silver, lead, copper, and tin.....	10	0	0
Copper .....	914	0	0	Silver, lead, copper, tin, and diamonds .....	40	0	0
Coal .....	160	0	0	Silver, lead, tin, and diamonds .....	40	0	0
Cobalt .....	20	0	0	Silver, lead, copper, and diamonds...	40	0	0
Diamonds .....	180	0	0	Scheelite .....	120	0	0
Iron .....	40	0	0	Tin .....	4,482	2	0
Silver .....	102	0	0	Tin and diamonds .....	477	0	0
Silver and lead .....	60	0	0	Wolfram.....	60	0	0
Silver and copper.....	180	0	0				
Silver, lead, and tin .....	40	0	0		9,200	2	37

During the year ten applications were made for leases of sites for dams, reservoirs, &c., in connection with mining, the area applied for being 89 acres. During the same period six applications were granted, covering an area of 233 acres 1 rood 31 perches, and five were refused for an aggregate area of 40 acres.

SPECIAL LEASES FOR DREDGING FOR GOLD, &c.

During the year 1899, 399 applications were made for special leases for mining by means of dredging, or similar methods, in the beds of rivers, creeks, lagoons, &c., and on the contiguous flats, covering an aggregate area of 28,903 acres 2 roods 9 perches; but during the same period only 91 applications had been dealt with, the majority have, for various reasons, been refused. The area covered by these 91 applications was 6,888 acres 1 rood 12 perches. During the year several applications were approved, and promises of leases published where the river bed applied for passed through Crown land; but the great majority of the applications were held over until the Bill to regulate this class of mining was dealt with by Parliament. The Bill was assented to by the Governor on 22nd December last, and is known as the "Gold and Mineral Dredging Act, 1899." Amongst other things, this Act validates all leases the applications for which were approved before the passing of the Act, but does not otherwise affect them, and also validates all applications which had not been approved prior to its coming into operation.

Every effort will now be made to deal expeditiously with these outstanding applications to enable those *bond fide* applicants who are only awaiting the issue of their leases to commence operations on an extensive scale.

MINING ON AND UNDER RESERVE LANDS, ROADS, &c., UNDER AUTHORITIES TO MINE ISSUED IN TERMS OF SECTION 28, MINING ACT OF 1874.

The number of permits or authorities to mine in terms of the above section lodged during the year 1899 was 171, being 28 more than those lodged in 1898.

The number dealt with during the year was 126, of which 62 were granted and 64 were refused, being 71 less than those dealt with during 1898.

The following table shows the area of reserved lands comprised in permits or authorities granted during 1899, and the minerals to be mined :—

	a.	r.	p.		a.	r.	p.
Coal .....	6,098	2	16	Gold, silver, and copper .....	0	2	22
Shale .....	1,330	1	8	Tin .....	3	0	11
Coal and shale .....	17,921	0	13	Diamonds and tin.....	3	3	32
Gold .....	176	1	31½				
Copper .....	9	2	5		25,543	2	18½

This table shows the area of reserved lands, roads, &c., held under authorities to mine in force on 31st December, 1899, and the minerals to be mined :—

	a.	r.	p.		a.	r.	p.
Gold .....	137	0	29½	Tin .....	83	3	16
Coal and Shale .....	9,594	1	18	Shale .....	8	2	32
Coal .....	16,195	2	29½	Gold and silver .....	1	0	27
Copper .....	146	1	18	Gold, silver, and copper .....	0	2	22
Cobalt and nickel, manganese and red ochre .....	5	1	14		26,173	1	6

The area held under permits or authorities on 31st December, 1899, is less by some 7,327 acres than that so held on 31st December, 1898, the principal falling off being in lands held for mining for coal and shale.

AUTHORITIES TO DIG AND SEARCH FOR MINERALS IN TERMS OF THE MINING ACT OF 1889.

During the year 142 applications were lodged in the various warden's offices for authorities to dig and search for gold and other minerals on lands held as conditional leases, conditional purchases, &c. Only 40 of these applications could be granted being for authorities to search for minerals other than gold, silver, lead, tin, and antimony; the balance had to be refused for various reasons—the principal being the land could be operated upon under the provisions of the Mining on Private Lands Laws. The Mining on Private Lands Act of 1894 and the Amending Act (Mining Laws Amendment Act of 1896) have superseded the Mining Act of 1889 in so far as mining on private lands or conditional leases for gold, silver, lead, tin, and antimony is concerned, and it is only with regard to minerals other than these that the Act operates.

As has been before pointed out, the Mining on Private Lands Laws do not operate on conditional leaseholds until after the conditional leases have been brought under their operation by proclamation. During the year 35,929 acres 1 rood have been brought under the operation of these Laws; the total area of conditional leased lands so proclaimed since the passing of the Mining Laws Amendment Act of 1896 amounts to about 141,000 acres.

The attached schedule or table shows the conditional leases brought under the operation of the Mining on Private Lands Laws during the year 1899.

TABLE

TABLE of Conditional Leases proclaimed to be subject to the provisions of the Mining on Private Lands Laws.

Village Lands, Town of Gulgong.

Allotment.	Section.	Locality.	Area.	Date of Proclamation in Gazette.
11	27	Village of Gulgong .....	a. r. p. 0 1 0	27 October, 1899.

During the year 36 applications were made by the owners of alienated lands for permits, in terms of section 7 of the Crown Lands Act, to mine for and remove the minerals in the lands which under the terms of alienation were reserved to the Crown. Of these applications, 19 have been granted. Prior to the coming into operation of the Mining on Private Lands Laws, which provide for the granting of authorities to prospect and leases to mine for gold, silver, lead, tin, and antimony, this section, 7, of the Crown Lands Act was rather extensively used, but it has now been entirely superseded by the Mining on Private Lands Laws so far as mining for gold, silver, lead, tin, and antimony are concerned.

Seeing that only minerals other than those specified can now be mined for under this section, the small number of applications made can be accounted for.

During the year 94 applications were made for authorities to dig and search for gold and other minerals on lands held from the Crown as settlement leases under the Crown Lands Acts. Eighteen applications were refused as abandoned and for various other reasons, and 66 applications were granted and authorities issued.

Seeing the very large areas of Crown lands now held, and continually being taken up under the settlement lease tenure, it was anticipated (see my report for last year) that when it became known to the mining community that these lands could be entered upon and searched under an authority from the Minister, the privilege would be largely availed of. The increase, notwithstanding the comparative smallness of the numbers of applications made, viz., in 1898, 24, as against 94 in 1899, verifies my anticipations.

The whole system is, however, rather cumbrous, and much valuable time is unavoidably taken up under the machinery now in operation before a prospector can properly get on these lands, and this causes some dissatisfaction; but this must be so until the matter can be dealt with by the Legislature. Provision is being made in the Bill to amend and consolidate the Mining Laws to deal with these and lands held under other tenures under the Land Act in a manner more satisfactory to the mining community.

REGISTRAR

REGISTRAR AND INQUIRY BRANCH.

The annexed table, setting out the area of Crown and private land held under lease on the 31st December, 1899, and the minerals to be mined for, shows a small increase on the area so held at the end of the previous year, the most noticeable difference being in the area held for tin-mining purposes. There is also a small increase in the area held for coal, shale, and diamonds.

The year was not a particularly good one for mining ; as in the preceding year, the want of water being a serious drawback to the proper development of the various fields.

During the year 1,821 gold leases, representing an area of 4,957 acres, 170 mineral leases, representing 5,659 acres, and 46 leases under the Private Lands Act, representing 651 acres were cancelled. The total number of leases so cancelled being 2,037, against 1,472 for the preceding year.

A large amount of business was transacted during the year in the way of transfers, mortgages, sub-leases, &c.

RETURN showing the area of Crown and Private Lands held under Lease at 31st December, 1899, and the Minerals, &c., to be mined for.

## THE PROSPECTING BOARD.

The Vote passed by Parliament to promote prospecting for gold and other minerals amounted, as formerly, to £25,000 for the year.

The members of the Board were kept exceptionally busy during the period, inquiring into and dealing with the large number of applications which came to hand from every mining district in the Colony. Every important mining centre has been visited at least twice during the year, but even then complaints were received as to the delay in considering the applications. Without doubling the number of the inspecting officers, it would be impossible to deal with applications as they are received, in view of the large area of country embraced by these applications.

As pointed out in the last year's report, there are indications that the miners in some cases are inclined to depend more on the assistance received from the Department than on their individual energies. When such cases are brought under notice the Board insist that the men show their *bona-fides* by doing some work at their own cost before recommending aid from the Vote. This course seems to have a good effect.

Such a large number of shallow shafts have now been sunk on our gold-fields that the Board are giving preference to the applications from miners who are willing to go down and test the ground below the water-level. Capital is, of course, required to procure the machinery necessary to deal with the water. If, however, our fields are to be tested at deeper levels, as has been done in Victoria and Queensland, to about 3,000 feet, then the individual miner must make way for the capitalist. It is a reflection on the Colony that our deepest gold-mine is but a little over 1,000 feet.

Without doubt the most genuine prospecting work being carried on in New South Wales at the present time is that by the Corowa Deep Lead Gold-mining Company, at Corowa. This company, which has been well supported by the Department, is engaged opening up the deep wet lead which is being worked so successfully on the Victorian side of the Murray at Rutherglen, and supposed to cross the river at Corowa. Very substantial machinery has been erected, and powerful pumps, capable of dealing with a large body of water, are kept constantly at work. It was a big undertaking, sinking through running sand, but the work has been successfully carried out, and the company is now engaged driving towards the lead, which is expected to be tapped some 1,300 feet from the bottom of the shaft.

Work on the deep tin lead at Nine Mile, in the Deepwater district, will begin early in the year. Good results are anticipated from these operations.

The Board have also recommended substantial aid to continue the Homeward Bound shaft, at Grenfell, the deepest on the field, and also to the Bushman's Hill Company, at Parkes, to sink their 846-foot shaft to 1,100 feet.

The importance of testing the Mount Hope field at a lower level has also been recognised, and assistance granted to carry the Great Central shaft to 500 feet.

It is also proposed to sink a deep shaft at Sunny Corner to test that rich mineral district. Several bores were put down by the diamond drill there, but the results were not satisfactory, and it is thought that the shaft will be more effective.

Boring operations have been completed on the river flats at Gundagai, but the results were not up to expectations. Eight bores were put down as under :—

No. 1 bore, 106 feet deep .....	No gold.
No. 2 bore, 102 feet deep .....	No gold.
No. 3 bore, 105 feet deep .....	Two fine colours.
No. 4 bore, 112½ feet deep .....	No gold.
No. 5 bore, 114 feet deep .....	No gold.
No. 6 bore, 111 feet deep .....	Two fine colours.
No. 7 bore, 96 feet deep .....	No gold.
No. 8 bore, 80 feet deep .....	Two fine colours.

Mr. Pittman, Government Geologist, in his report on the result of the operations, says :—

In my opinion there is no probability that any good purpose would be served by further continuing the boring operations. The results obtained must be regarded as disappointing, inasmuch as no clearly-defined auriferous lead, such as would warrant the sinking of expensive shafts, has been located. Two fine colours of gold have been found in three different bores, and the varying depth and positions at which they were obtained indicate that the deposits are probably more suitable for the operations of dredges than for those ordinary alluvial mining. The rather irregularly-arranged strata of clays, sands, and gravels met with in the bores point to deposition by river which has frequently shifted its course, and the gold contained in these strata does not appear to be sufficiently concentrated to pay for deep underground excavation. On the other hand, although only six colours have been obtained in these experiments, this result cannot be regarded as anything like a definite index of the value of the auriferous deposits, as the hand-drill forms a very imperfect means of determining the actual amount of gold present.

Boring

Boring is still being carried out at Albury, with fair indications of payable ground being ultimately discovered. The ground is deep and difficult to bore.

The theory that an alluvial lead exists in the vicinity of the Wyalong Gold-field is now being tested by the putting down of a series of bores near the Pine Ridge. The flat nature of the country, and the absence of any indication of a channel, add to the difficulties of the search.

The diamond drill is also being used in the effort to trace the lost Star lead at Gulgong. Large quantities of gold were taken from this lead during the early days of the field, but the lead was lost, and all efforts to trace its continuation have, so far, proved futile.

The Board are also employing a diamond drill in testing the iron-ore deposits at Mittagong, and are also, by means of shafts, proving the extent of the iron-ore deposits on the Irondale Estate, near Wallerawang, and between Goulburn and Marulan.

From the foregoing, it will be seen that a departure has been made from the former system of directing the whole of the Vote in aiding small parties to carry on shallow prospecting operations on our old gold-fields, which have now been well tested.

The new clause, which was added to the Regulations in 1896, that all moneys paid from the Vote shall be refunded to the Department should payable minerals be discovered by means of the aid granted, has been found to work satisfactorily. The following refunds were made during the past year :—

	£	s.	d.
The Caledonian Gold-mining Company .....	72	0	0
The Little Broken Hill Silver and Lead Mining Syndicate, Rockwell, near Broken Hill	50	0	0
Ninness and Parker, Cooke's Patch Reef, Stewart's Brook.....	62	10	0

The Board have no desire to unduly press for these refunds until it is clearly demonstrated that the mine has reached the dividend-paying stage, when it is considered that a refund of the subsidy which brought about the desirable result should be a first charge upon the profits from the mine. Refunds are expected from several other mines, which have been assisted during the past year, so soon as further developments have taken place.

The total number of applications for aid received during the year was 1,715.

These were dealt with as under :—

	1899.
Aid granted in ..	440 cases.
Aid refused in.....	798 „
Applications abandoned .....	61 „
Applications for public batteries.....	7 „
For reward for the discovery of new gold-fields.....	6 „
For free treatment of ore.....	5 „
Applications under Section 8, Mining on Private Lands Act .....	4 „
Miscellaneous cases .....	352 „
Applications awaiting inspection at the end of the year .....	42 „
	<hr/> 1,715

The foregoing figures represent the cases dealt with by the Board, but the total number of communications received in connection with the administration of the Vote were 6,156.

The principal alluvial find of importance made during the year through the agency of the vote was that of James Stiff and party on Toohey's settlement lease, situated about 18 miles from Grenfell in a northerly direction.

Mr. Geological-Surveyor Jaquet, reporting on the find, says :—

Bedrock was reached in the shaft at a depth of 164 feet, the sinking being through red and blue clays. The "bottom" consists of soft decomposed granite, and is in all respects an admirable one from a miner's point of view. The lead has been proved to be about 80 feet wide. Forty-five loads of dirt taken from across the full width of the lead have been washed for a yield of a little over 5 dwt. per load. The gold-bearing wash is about 9 inches thick. It is mainly composed of a coarse sand, with a small admixture of water-worn pebbles.

The gold is coarse and of good quality. It occurs for the most part in the form of pieces weighing from a few grains to 2 or 3 dwt. A nugget weighing 16 dwt. has been obtained from Fitch and party's (No. 2 North) claim and one weighing 10 dwt. from the prospector's claim. In most of the prospects which I examined a few grains of platinum could be distinguished. The gold is unevenly distributed across the lead, and appears mainly to be concentrated in small depressions in the bedrock.

The lead has already been located by shafts between claim No. 1 South and claim No. 4 North, a distance of about 30 chains. Claims have been applied for along the supposed course of the lead for a distance of about 2 miles, and upon some of these claims prospecting operations are in progress.

Prospecting is not likely to proceed vigorously until a portion of Toohey's settlement lease is cancelled. This Department has taken steps to have this done as soon as possible, and it is expected that the cancellation will be gazetted in a few days' time.

There is no water available for gold-washing purposes in the vicinity. This can only be obtained by excavating tanks and constructing dams. Until this has been done, and there has been a good fall of rain in the district, we shall not get any returns from the field. Water for domestic purposes is being obtained from a spring upon the water reserve, which adjoins Toohey's lease.

On the whole, I think the prospects obtained so far are encouraging. About 140 miners are upon the field. Having regard to the depth of sinking (160 feet), and the absence of water for washing purposes, the field is not likely to prove a poor man's diggings, and I would caution miners unprovided with means from rushing to it.

Although the finds have been limited, still a considerable area of Crown lands has been tested, and employment found for a number of men.

GEOLOGICAL

## GEOLOGICAL SURVEY.

Under the direction of Mr. E. F. Pittman, Government Geologist, the Geological Survey Branch of this Department has done a great deal of useful work during the year.

In accordance with Mr. Pittman's recommendation, a series of bores were put down in search of auriferous leads at Black Range, Albury, at Gundagai, and at Wyalong. In the case of the Black Range series, the presence of an auriferous lead was determined. Traces of gold were obtained at Gundagai, but no defined lead was discovered. The Wyalong line of bores was not completed at the end of the year; but, so far as the operations have been carried out, success has not yet been met with.

In addition to numerous other duties the Government Geologist submitted reports upon the following :—

- The Victory Mine, Forest Reefs.
- The alluvial flats, Gundagai.
- Occurrence of telluride of gold at Gundagai, New South Wales.
- Discovery of bauxite deposits.
- Silver-mines at The Peaks, Burragorang.
- Testing for alluvial deposits at Wyalong.
- The jointings and cracks occurring in rock at the site of proposed fort at South Head.
- The auriferous deposits at Rosedale, Orange.
- Absence of artesian water at Wyalong.
- Prospecting of iron-ore deposits.
- Result of boring operations at Gundagai.

Mr. Geological-Surveyor J. Carne, F.G.S., in addition to completing his comprehensive report on "The Copper-mining Industry," which was issued by this Department during the year as No. 6 of the "Mineral Resources" series, also spent considerable time in field work. He furnished the following reports :—

- Deep lead at Log Paddock, near Mudgee.
- "Larry's Hill" Copper-mine, Wiseman's Creek.
- Second report on Yulgilbah Cinnabar Mines, Upper Clarence.
- On portion of the Cudgegong River channel for dredging purposes.
- Proposed reservation, for mining purposes, in the parish of Belubula, county of Bathurst.
- Proposed deep test of the auriferous heathlands of the North Coast.
- Proposed boring for deep auriferous leads at Urana.
- The Tuglow copper and Mount Werong silver-mines.
- The Albert water-holes and Orange Plains copper-mines.

Mr. Geological-Surveyor Jaquet, A.R.S.M., F.G.S., assisted in his field work by Mr. L. F. Harper, has been engaged during the greater part of the year in examining and mapping the iron-ore deposits of the Colony, with the object of preparing a comprehensive monograph on this interesting subject. Mr. Jaquet has, in addition, prepared geological maps of the Mittagong district and of the bauxite and aluminous iron deposits at Wingello, and has also furnished reports on the following :—

- Discovery of deposits of bauxite.
- Clay deposits of Boxer's Creek, near Goulburn.
- Preliminary report on the ironstone deposits in the parish of Falmash, near Piper's Flat.
- Progress report on prospecting operations upon the Fitzroy iron deposit, near Mittagong.

During the early months of the year Mr. Geological-Surveyor J. A. Watt was engaged upon a geological survey of the Hillgrove Gold-field, but resigned his position before this work was completed.

Mr. Geological-Surveyor E. C. Andrews, B.A., was appointed to the vacancy caused by Mr. Watt's resignation. After being employed for some weeks on routine work he completed the survey of the Hillgrove Gold-field, being assisted in the field work by Mr. M. Morrison. Mr. Andrews' report on this work will shortly be issued as No. 8 of the "Mineral Resources" series.

Mr. E. C. Whittell, late Field Assistant, was employed during the greater part of the year in connection with the Prospecting Vote, and in supervising the boring operations at Black Range, Gundagai, and Wyalong. He has recently been appointed an Inspector of Mines.

Mr

Mr. G. W. Card, A.R.S.M., F.G.S., Curator and Mineralogist, besides performing the clerical work in connection with the assaying of ores, &c., has prepared a number of collections of minerals and rocks for schools and other institutions. He has also rendered valuable service in petrological examinations in connection with the geological survey, in the examination of minerals and rocks for the public generally, and in the arrangement of the Museum collection.

Mr. W. S. Dun, F.G.S., Palæontologist and Librarian, has, as usual, attended to the routine work of the library, and to the correction of proofs, &c., of the various publications. He has shown much energy and care in the discharge of his duties, which include the identification of fossils collected by the geological staff, or sent in by the public, and also the making up and arrangement of collections of palæontological specimens for exchange with foreign institutions, &c.

#### LIMESTONE CAVES.

The number of visitors to the Jenolan Caves is steadily increasing. This is highly satisfactory, as it shows that the public are pleased with the efforts which have been made for their convenience. The Caves House surroundings have been made very attractive by plantations formed under the supervision of the Director of the Botanical Gardens.

New roads have been constructed by the Public Works Department to the Wombeyan Caves. One of these is a much-needed deviation of the old route from Goulburn, the other is an entirely new road from the tourist resorts in the vicinity of Bowral. These caves have been made very convenient for inspection, and a new accommodation-house is about to be erected.

Additional accommodation for visitors is also about to be provided at the Yarrangobilly Caves.

Surveys have been made of the principal caves at Wombeyan, Yarrangobilly, and Abercrombie by Mr. O. Trickett of the Geological Survey Branch. The plans of these surveys will be found attached to his report.

#### MINING SURVEYS.

At the beginning of last year four surveyors were employed on the permanent staff, together with an additional surveyor engaged under special arrangement, endorsed by the Public Service Board, which provided that salary should be paid when the exigencies of the work demanded his employment. These, with casual assistance from licensed surveyors, working under contract, were at that time found to be sufficient to cope with the work. During the year, however, it was found that the applications for dredging leases became so numerous, and their survey involved so great an expenditure of time and energy, that it was out of the question to attempt to carry out the work with the existing staff. It was accordingly decided to employ licensed surveyors freely in the effort to prevent accumulation of arrears. In certain instances the services of local licensed surveyors in the employment of the Department of Lands were utilised, and in other cases surveyors were despatched from headquarters, the necessary financial inducement being provided by requiring applicants to pay fees based on the length of the perimeter measured. As a result of this policy, a large number of special leases have been surveyed, the ordinary work has been kept well up to date, and in the near future it is anticipated that the number of outstanding instructions, which, under the special circumstances narrated, had somewhat increased, will be reduced to a normal figure.

The number of mining surveys made during the year was 1,139. Of these, 691 were made by surveyors on salary, and 448 by surveyors remunerated principally by fees paid by mining applicants.

At the close of the year 261 instructions for survey of leases, &c., remained unacted upon in the hands of the surveyors. Almost all of these related to recent mining applications. The 1,139 surveys made comprised the following:—

Gold leases on Crown lands .....	351
Special gold-dredging leases .....	185
Gold leases on private lands .....	188
Mineral leases on Crown lands .....	271
Mineral leases on private lands .....	13
Mining permits .....	17
Mining tenements.....	114

Ten surveys of Artesian Well schemes were made with a view to action under the Artesian Wells Act of 1897.

CHARTING,

## CHARTING, &amp;c.

Mining Leases on Crown Land.—The number of gold and mineral lease applications relating to Crown land dealt with in the charting branch during the year was 1,287.

Mining Permits.—The number of 27th and 28th section applications dealt with was 184.

Mining Leases on Private Land.—One hundred and ninety-four applications to lease land under the provisions of the Mining on Private Lands Act were dealt with.

Mining Tenements.—One hundred and forty-two plans of measurement under Mining Board Regulations were examined, charted, &c.

Mining Lease Cases undealt with at the close of the year.—At the close of the year there remained under action in the branch 139 gold and mineral lease applications, 21 applications under 28th section, and 27 applications for lease of private lands.

Authorities and Agreements, Mining on Private Lands Acts.—During the year 1,086 applicants for authority to enter private lands for mining purposes, and 128 agreements relating to mining on alienated land, were investigated and dealt with.

Reserves under 26th Section, Act of 1874.—One hundred and twenty reserves under 26th section of the Mining Act of 1874 were described, gazetted, and charted.

Mining Districts and Divisions.—In 13 cases alterations were made in the boundaries of mining districts and divisions; the results in all cases being shown upon illustrative maps for the use of local officers.

Notation of Plans.—1,574 notations of transactions relating to leases, &c., were made upon plans during the year.

Plan Drawing.—Mining Surveys.—1,028 plans of mining surveys were drawn. Until late in the year the regular staff attempted to cope with this work, but, by reason of the large amount of drawing involved in the preparation of plans of dredging leases, it was found that the work could not be accomplished without seriously delaying the current work of the Branch which had also abnormally increased. To meet the difficulty it was decided to employ contract draftsmen. Satisfactory progress is now being made in the reduction of arrears in this branch of the work.

Artesian Well Surveys.—Plans of levels of 10 Artesian Well schemes and sections of the majority of these were prepared in the Branch during the year. The whole of the work has recently been transferred to the Department of Lands.

Colliery Plans, &c.—To facilitate the work of the Chief Inspector of Collieries, plans were drawn of the Zig Zag and Vale of Clywdd Collieries, and the work of identifying colliery holdings and charting them upon Chief Inspector's maps has been continued.

Map Records.—Private Lands Work.—One hundred and forty-one maps of parishes, &c., were prepared, charted up to date, and placed in use for charting leases and authorities under Mining on Private Lands Act.

Revision of Proofs and Draft References of Lands Department Maps.—Eighty-two proofs of Lands Department maps and 90 draft references were revised with regard to mining surveys before publication by the Department of Lands.

Compilations.—Fifty-three maps of Mining Localities have been prepared with a view to heliographic reproduction. Most of these were compilations upon tracing cloth, the remainder being transparencies for which published lithographs charted to date are used.

Included in the above is a series of sketch maps of the rivers of the Colony which have been made the subject of dredging lease applications. These have been prepared with a view to facilitating the provision of information to the public with regard to the areas applied for. These maps have already been found of great use in the Department, and as the dredging industry progresses their value should be increasingly recognised.

For the illustration of publications produced, or to be produced, in the Geological Branch, two maps of the Colony were prepared to assist the lithographer, one showing the Mining Districts and Divisions throughout the Colony, the other to show the general distribution of minerals.

Standard Maps.—One hundred and forty standard maps were charted-up during the year. The Department now possesses 1,634 of these maps.

Maps

Maps supplied to the Wardens and others.—Six hundred and forty-nine charted-up copies of maps were forwarded to Mining Wardens, Registrars, and others.

Resumptions.—Three cases relating to resumptions of parts of the surface of leases required for public purposes were dealt with.

Illustrations for Stock Branch.—Two hundred and eighty-nine illustrations, comprising charted-up maps, tracings, &c., were prepared for the use of the officers of the Stock Branch.

Miscellaneous Papers.—In addition to lease applications, 6,120 papers were received and dealt with during 1899.

Tracings for Surveyors.—2,544 tracings were made to assist surveyors in the performance of their duty. This work has greatly increased owing to the exigencies of the dredging lease work.

Duplicate Diagrams.—One hundred and ninety-seven copies of diagrams were drawn in cases where leases were renewed after expiration, &c.

Field Work by Officers of the Branch.—On two occasions the services of officers of the Branch were utilised in the country to assist a Mining Warden in the work of defining areas to be allotted under authority under Private Lands Act.

Heliography.—5,513 heliographs and ferrotypes of mining maps and plans and illustrations for the Public Watering Places Branch were printed.

Plan-mounting and Bookbinding.—3,516 plans, maps, &c., were mounted, and 14 books bound by the plan-mounter.

The personnel of the Drafting Staff remains the same as last year, with the exceptions that Mr. Cash was appointed to fill the vacancy caused by the death of Mr. Onslow, and Mr. Bornstein was appointed temporarily to assist in the work of the Branch. I can report strongly on the consistent diligence of the officers of this Branch.

Notwithstanding the great change in the character of the work of the draftsmen, and the increase of its amount consequent on the survey of dredging leases, and the elaborate calculations and charting involved, the state of the work is fairly satisfactory, the only old cases in the Branch being those which were held pending the passage of the Dredging Bill which has only recently become law.

#### THE MINING SCHOOL.

The Mining School at the University of Sydney has been opened to the public since 1892, and at present it numbers about sixty students, all of whom are working for their degrees in Mining Engineering, or for certificates in some branch of that profession. Nearly all the students who have already passed through the school have found suitable employment in mines or metallurgical works. Of these, fifteen have taken the degree of Bachelor of Engineering in Mining, and are in receipt of salaries averaging over £300 a year. One of these holds the position of Assayer and Analyst and Mineralogist to the Geological Survey of West Australia, while others have been appointed Mining Managers at the Celebes and in Sumatra at salaries of £750 and £1,000 per annum. Two gentlemen who graduated in 1899 have been appointed to positions of importance. Other graduates hold important positions at the Mount Morgan Mine, Queensland, at Block 14, Broken Hill, the Smelting Company of Australia, Dapto Works, and the Over-flow Mine, New South Wales. Others, who have been through a portion only of the course of instruction at the School, hold the positions of Geological Surveyor to the Governments of New South Wales and West Australia, while another has been appointed Assistant Analyst to the Royal Mint in Sydney.

Students in the Mining School have the use of the finely equipped laboratories belonging respectively to the Chemistry, Engineering, Physics, and Geological Departments, and attend the instruction given by the following:—Professor Liversidge, F.R.S., M.A., LL.D., Chemistry; Mr. J. A. Schofield, Assoc. R.S.M., and Mr. A. Jarman, Assoc. R.S.M., Demonstrators in Chemistry, Metallurgy, and Assaying; Professor Warren, Wh.Sc., M. Inst. C.E., and Mr. S. H. Barraclough, B.E. (Sydney), M.M.E. (Cornell), Assoc. M. Inst. C.E., Engineering; Mr. E. F. Pittman, Assoc. R.S.M., Government Geologist, New South Wales, Mining; Mr. G. H. Knibbs, L.S., F.R.A.S., Underground Surveying, &c.; Professor Gurney, M.A., and Mr. E. M. Moores, M.A., F.I.A., Mathematics; Professor Pollock, B.Sc., Physics; Professor David, B.A., F.G.S., and Mr. W. G. Woolnough, B.Sc., Geology and Mineralogy; Mr. Basil W. Turner, Assoc. R.S. Mines, London, F.C.S., Metallurgy.

Arrangements

Arrangements are being made for giving students practical experience in the separation and concentration of ores, and the separation of metals by amalgamation and other processes, the necessary plant having been provided at the Mining School, and the building for it is now being erected. The number of students in the Mining School has increased to such an extent that the accommodation in the Metallurgical Laboratory has had to be considerably enlarged. The building in course of erection provides for more assay furnaces as well as for the processes mentioned above; and additional accommodation is also being provided in the Engineering Department for Mechanical Drawing and experimental work in Engineering and Surveying.

During part of the vacation, the Lecturer in Metallurgy arranges to take students for excursions to works in the Colony where metallurgical operations are being carried on.

The fact should be emphasized that the University of Sydney Mining School is open to the public without any restriction, and it is not necessary for a student desirous of going through a part only of the Mining Engineering course to pass any kind of entrance examination or to matriculate. Several students have, for example, studied Assaying and Chemistry only at the Mining School, and to those who have passed their examinations satisfactorily the University has granted certificates of proficiency in those subjects.

In order, however, to qualify themselves for the full degree of Bachelor of Engineering in Mining, the University requires students to pass an entrance examination and to attend all the prescribed courses of instruction (except in the case of students who can adduce proof of having already passed elsewhere an equivalent or partly equivalent examination, as, for example, students from the Technical College, who have passed in geology, mineralogy, &c. Such students may be excused attendance at such portions of the courses of instruction at the University as those in which they have already passed at the Technical College and elsewhere. Although it is possible for students to obtain certificates of having passed in special subjects in the Mining School, there can be no doubt whatever that it is a decided advantage for them to complete the whole course of study necessary for obtaining the Bachelor of Engineering degree.

Any one desirous of joining the Mining School can obtain full particulars on application to the Registrar of the University, Glebe, Sydney. It may, however, here be mentioned that students wishing to qualify for the Mining Engineering degree can enter the School if they have passed:—(1.) The Entrance Science Examination, (2.) The Senior Public Examination, or (3.) If they have matriculated and attended the lectures in the First Year Arts Course, and passed the First Year Examination in Arts; or (4.) if they produce evidence of having graduated in Arts or in Science.

The School has been liberally subsidised by the Department, and the fact may be repeated, that any member of the community may attend any of the classes of the Mining School on payment of the prescribed fee to the Registrar, and may be admitted to examination in any particular subject, and if successful, may be granted a certificate of proficiency in that subject.

The various laboratories in connection with the Mining School are open to the public for inspection all the year round, between the hours of 9 a.m. and 5 p.m., except for about a fortnight during January.

The recent great increase in the number of students is the best proof that the public appreciates the importance and usefulness of this Mining School.

Appendix (1) showing details of fees at Mining School, University of Sydney.

First Year.	£ s. d.	Second Year.	£ s. d.	Third Year.	£ s. d.
Mathematics .....	6 6 0	Chemistry, practical .....	12 0 0	Assaying.....	24 0 0
Chemistry, inorganic .....	6 6 0	Geology .....	6 0 0	Mining .....	4 4 0
Chemistry, practical .....	7 5 0	Geology and practical		Metallurgy.....	4 4 0
Physics, lectures .....	6 6 0	geology .....	6 6 0	Materials & structures	2 2 0
Physics, practical.....	3 3 0	Mineralogy, lectures .....	2 2 0	Drawing and design...	3 3 0
Physiography .....	2 2 0	Applied mechanics .....	4 4 0		
Applied Mechanics .....	4 4 0	Surveying .....	4 4 0		£37 15 0
Descriptive geometry .....	3 3 0	Physics, electrical .....	3 3 0		
Mechanical drawing.....	3 3 0	Physics, practical .....	3 3 0		
		Materials and structures...	2 2 0		
	£41 18 0	Mechanical drawing .....	3 3 0		
			£40 7 0		

The total amount of fees for lectures and practical work for the whole course is thus about £119 18s. There is also a fee of £10 for the Bachelor of Engineering degree, and experience has shown that

sundry expenses, such as cost of travelling to and from mines, and purchase of apparatus, may amount to about £20. This apparatus remains the property of the student, and most of it is saleable at but a slight reduction upon the original cost. Much of the travelling to mines is optional on the part of the students, rather than compulsory.

Appendix (2). Comparative table showing cost of Mining Engineering degrees at Typical Teaching Institutions.

At the Royal School of Mines, London, which is supported by the State, the fees amount to about £88 for the subjects corresponding to those of the first two years of the Sydney University School of Mines course, and to £46 for the tuition of the third year—a total of £134. The student, however, at the Royal School of Mines can take up either Mining or Metallurgy, instead of both; for Mining alone, the third-year fees are £29, and for Metallurgy alone £30, or £46 if both are taken. There are also expenses for apparatus, travelling to visit mining districts, &c.

The tuition fees for the degree in Mining at the Massachusetts Institute of Technology is £41 13s. 4d. a year, or £166 13s. 4d. for the four-year course. The cost of chemicals and apparatus, however, is extra, and there are probably examination and tuition fees in addition. The cost of tuition is only partly covered by fees; the institution loses about 150 dollars, or £31 5s. per annum, by each student.

At the School of Mines, Columbia College, New York, the fees are £41 13s. 4d. per annum, or £166 13s. 4d. for the four-year course. In addition, there are graduation fees, the cost of apparatus, materials, summer excursions, &c., making apparently a total of about £240.

THE GOVERNMENT METALLURGICAL WORKS, CLYDE.

During the year 1899, 50 parcels were received for bulk treatment; weight received, 162·9 tons; fees paid for treatment, £197 1s. 5d.; weight of gold extracted, 202·35 oz., of the value of £652 19s. 7d. The 50 parcels of ore comprise the following :—39 lots treated for gold, 5 lots, which were bulk sampled and assayed only, and 6 lots of wolfram and scheelite ore sampled, assayed, and concentrated. Some of the parcels were treated by more than one process—so the total will be more than 50, i.e., 30 lots were crushed, amalgamated, and concentrated, 5 were crushed, bulk sampled, and assayed only, 2 lots cyanided, 5 chlorinated, 3 amalgamated, 1 lot of zinc-cyanide residues treated, and 6 lots of scheelite and wolfram ores crushed and concentrated. Included in the 162·9 tons were 21·4 tons of wolfram and scheelite ores, which were crushed and concentrated, yielding 2·46 tons of concentrates—assaying from 20·6 per cent. to 64·52 per cent. of tungstic trioxide (WO<sub>3</sub>).

627 numbered samples were received for assay and examination in the chemical laboratory, consisting of average samples of crushed ore, concentrates, tailings, slimes, cyanide residues, &c.

Experiments were conducted on various average lots with a view of ascertaining if certain ores, tailings, slimes, &c., were amenable to the cyanide and chlorination methods of extraction.

The following assays have been made during the year—all assays being in triplicate : --

Gold and silver .....	402	Sulphur .....	3
Copper.....	12	Tungstic trioxide .....	16
Iron .....	7	Cyanide detd. ....	121
Lime.....	4	Consumption of cyanide and acidity tests .....	13
		Miscellaneous assays .....	27.

Or a total of 605 various determinations.

Forty-four lots of amalgam were retorted and the gold smelted and refined, and 19 chlorine residues treated and the gold smelted.

Mr. James Taylor, B.Sc., F.C.S., A.R.S.M., having severed his connection with the Metallurgical Branch on the 30th September, the works were temporarily placed under the supervision of Mr. J. C. H. Mingaye, from 1st October. Mr. Mingaye's report, as Analyst and Assayer to the Department, will be found elsewhere, among the Appendices.

INSPECTION

\* This does not include cost of apparatus.

THE N.S.W. GOVERNMENT METALLURGICAL WORKS, CLYDE.

## INSPECTION OF MINES OTHER THAN COAL AND SHALE MINES.

Mr. Slee, F.G.S., Chief Inspector of Mines, reports 39 fatal and 153 non-fatal accidents in connection with the metalliferous mines of New South Wales during the year.

Unfortunately, the number of fatal accidents during 1899 exceed the number for 1898 by 4; while there is an increase also of 41 serious and minor, but non-fatal, accidents during the year as compared with 1898.

Of the 39 fatal accidents, 15 occurred in silver, 11 in auriferous quartz, 7 in alluvial gold, 4 in copper, and 1 each in tin and opal mining.

The percentage of fatal accidents in 1899 is 1·208, as compared with 1·154 in 1898; and non-fatal, 4·738, as against 3·695 for the same periods.

The number of men employed in and about the metalliferous mines of the Colony during the year was 32,297, as compared with 30,311 in 1898.

Among others the undermentioned localities were visited and inspected:—

*By the Chief Inspector.*

In the West:—Hill End, Mudgee, Sofala, Wattle Flat, Bathurst, Stuart Town, Molong, Parkes, Peak Hill, Alectown, Cobar, Mount Drysdale, and Girilambone.

In the South:—Young, Grenfell, Mittagong, Adelong, Gundagai, and Temora.

In the North:—Deepwater, Nine Mile, Torrington, Emmaville, Kangaroo Valley, Armidale, Puddledock, and Hillgrove.

The Chief Inspector, while visiting these districts, also inspected and reported upon various sites for which aid from the Prospecting Vote had been applied for; and performed numerous other important duties in connection with the Department.

*By Inspector Milne.*

In the West:—Bald Hills, Bobadah, Cobar, Gilgunnia, Gundabooka, Melrose, Mount Drysdale, Mount Hope, and Nymagee.

Mr. Milne also relieved Mr. Inspector Hebbard, of the Broken Hill District, for about three months, during the latter gentleman's leave of absence.

*By Inspector Hebbard.*

There are thirteen large mines in all in the Broken Hill District, and in addition to the regular inspections of these, Inspector Hebbard also visited and inspected at the following places, viz.:—Acacia, Allandale, Mount Robe, Nine-mile, Pinnacles, Purnamoota, Rockwell, Silverton, Thackaringa, and Yuba.

*By Inspector Godfrey.*

In the South:—Adelong, Argalong, Big Hill, Bateman's Bay, Blairgowrie, Barmedman, Bongongo, Batlow, Bungendore, Bywong, Bredbo, Bombala, Cunningham, Cullinga, Coolac, Cootamundra, Captain's Flat, Cooma, Cowra Creek, Currawang, Delegate, Fiery Creek, Garangula, Grenfell, Gundagai, Gobarralong, Hall, Junee, Jindabyne, Kybean, Lacmalac, Meragle, Muttama, Murrumburrah, Mimosa, Moruya, Mount Blundell, Nimitybelle, Nerrigundah, Narriah, Pambula, Quartzville, Sandy Creek, Sebastopol, Springdale, Scrub Yards, Temora, Tumberumba, Tumut, Tarago, Wyndham, Whipstick, Wolumla, Wyalong, Warrambucca, Weetangra, Wagonga, Yarralumla, and Yalgogrin.

In the West:—Cobar.

*By Inspector Hooke.*

In the West.—Amaroo, Bathurst, Blayney, Boney's Rocks, Bodangora, Burrage, Burraburra, Bumbery, Byng, Cadia, Carcoar, Cargo, Canowindra, Cow Flat, Cowra, Essington, Fifield, Forbes, Forest Reefs, Gallymont, Lucknow, Lewis Ponds, Mandurama, McPhail, Mitchell's Creek, Molong, Mount David, Mount Costigan, Mount McDonald, Newbridge, Oberon, Ophir, Orange, Parkes, Palmer's Bulga, Peak Hill, Pinnacle Reefs, Rockley, Rosedale, Stuart Town, Sunny Corner, Toogong, Tomingley, Tuglow, Woodstock, Wyagdon, Weelong, and Yeoval.

In the North.—Emmaville,

*By*

*By Inspector Polkinghorne.*

In the South.—Burrowa, Bungendore, Bredbo, Bombala, Bega, Captain's Flat, Cooma, Cobargo, Frogmoor, Fiery Creek, Jindabyne, Myalla, Murrumbateman, Nanima, Pambula, Queanbeyan, Wolumla, and Yass.

In the West.—Bathurst, Blayney, Burruga, Binda, Carcoar, Canowindra, Cargo, Dark Corner, Dandaloo, Forbes, Fifield, Gulgong, Gallymont, Hazelgrove, Hargraves, Hill End, Long Creek, Leadville, Mudgee, Mandurama, Myall, Molong, Oberon, Parkes, Peak Hill, Rockley, Sunny Corner, Sofala, Tuena, Trunkey, Tuglow, Two-mile Flat, and Wattle Flat.

*By Inspector Carthew.*

In the Northern District.—Armidale, Ashford, Bendemeer, Barraba, Bingara, Bundarra, Bukkulla, Bungwahl, Bulahdelah, Bucca Bucca, Boonoo Boonoo, Bowling Alley Point, Boggy Camp, Bora Creek, Balala, Copeland, Cobark, Ceramba, Corinda, Coolongolook, Clarence Town, Casino, Crow Mountain, Chichester, Craig Lea, Camp Fire, Dungog, Dungowan, Drake, Dalmorton, Dingo Creek, Deepwater, Emmaville, Enmore, Elsmore, Gilgai, Glen Innes, Glen Elgin, Grafton, Glenreagh, Glen Morrison, Gloucester, Hillgrove, Inverell, Kookabookra, Krambach, Limbri, Lionsville, Moonbi, Melrose, Moonan Brook, Manilla, Maitland, Nundle, Niangala, Nana Glen, Nymboi, Nine-mile, Omadale Brook, Pendaroi, Rockvale, Rocky River, Rawden Vale, Rivertree, Scone, Solferino, Stewart's Brook, Swamp Oak, Spring Creek, Tia, Tamworth, Tenterfield, Tallawadjah, Tingha, Uralla, Undercliff, Walcha, Woolomombi, and Wilson's Downfall.

Several of the above places were inspected two or three times during the year, and the regulations in connection with metalliferous mines were found to be generally complied with.

In conjunction with the regular inspection of metalliferous mines throughout the Colony, the inspectors also rendered valuable assistance to the Prospecting Board, by visiting and reporting upon cases in which application had been made for aid under the Prospecting Vote.

## DIAMOND DRILLS.

The total depth bored in 1899 was 1,573 feet 8 inches, or 168 feet 8 inches less than during the year 1898.

Diamonds used in 1899 cost 6s. 3 $\frac{3}{4}$ d. per foot, as compared with 4s. 11 $\frac{3}{4}$ d. in 1898.

The average cost per foot for boring during 1899 (including cost of enlarging bore at Sunny Corner) was 23s. 2 $\frac{3}{8}$ d., as compared with 21s. 3 $\frac{3}{4}$ d. in 1898.

## GOLD.

The amount and value of the gold won from our gold-fields to the end of 1899 is shown in the following table.

The yield for 1899 was 155,703 oz. in excess of that for the previous year; a result which, in face of the drawbacks with which the industry has had to contend, must be considered highly satisfactory. As no large finds of exceptional richness were chronicled during the year, this substantial increase can only be looked upon as evidence of the steady development of our gold-fields, and of the successful working and treatment of our low grade and complex ore deposits.

The Wyalong field again holds pride of place as the Division in which, during the past year, the largest amount of the precious metal was produced. Its yield for the year was 44,675 oz., as against 34,582 oz. in 1898.

Owing to the numerous gold-dredging enterprises on foot at the early part of the year, it was anticipated that the gold output for 1899 would have been materially contributed to by some of these, when started. It was found, however, that this but recently-introduced branch of the industry was seriously handicapped by the lack of legislation needful to give effect to its operations. The Gold and Mineral Dredging Act, 1899, introduced with a view of remedying this defect, only came into force at the close of the year; and it is confidently hoped that its enactment will be justified by the results obtained. A large number of special leases for dredging areas upon our auriferous river-beds have been taken up or applied for; and already a number of dredges are at work, and others in course of construction.

TABLE

TABLE showing the Quantity and Value of Gold won in the Colony of New South Wales from 1851 to 1899.

Year.	Quantity in oz.	Value.	Year.	Quantity in oz.	Value.
		£ s. d.			£ s. d.
1851 ...	144,120	468,336 0 0	1877 ...	124,118	471,448 8 1

1876 ...	167,411	613,190 7 9			

The following collection of notes in connection with our various gold-fields, as well as those to be found elsewhere in regard to our other metalliferous centres, are gathered from reports furnished by the Wardens and Mining Registrars. As has been pointed out on previous occasions, considerable difficulty is experienced in many instances by these officers in procuring information as fully as, in the general interest of our mining industries, could be desired. However, under circumstances as they exist, and taking into consideration the numerous and varied duties many of these gentlemen are called upon to perform, the data supplied by them is fairly complete.

#### THE BATHURST MINING DISTRICT.

##### *Canowindra Division.*

Mining in this Division has been considerably hampered owing to the scarcity of water; no new finds have been reported during the year. Inclusive of a few fossickers, the number of men engaged on this field, in mining operations, was 66; and the total amount of gold won was 340 oz., valued at £1,271 9s. 2d.

##### *Cowra Division.*

Mining in this Division has been almost at a stand-still during the past year. Turner and party, at Sam's Reef, Binni Creek, have done a considerable amount of work without any return; and the same may be said of that at Specimen Hill, in the same locality.

About 40 Europeans were engaged in mining in the Division, principally fossicking, without developing any fresh country.

Little or nothing has been done at Woodstock or Broula during the year. The latter, a silver and copper show, is highly spoken of, but at present unworked.

Marks and Company applied for two dredging leases on the Lachlan River, extending from near the railway bridge, Cowra, upwards to Challacombe's, prior to the passing of the Dredging Leases Act; and judging from the prospects obtained from the river bed, they bid fair to be a paying property.

During the year 35 applications for authority to enter on private lands have been lodged; most of which have been granted.

The quantity of gold purchased by the local Banks was 37 oz. 6 dwt., amounting in value to £133 14s. 2d., being an average of £3 18s. per ounce.

##### *Mount McDonald Division.*

The gold yield from this Division for the year shows more than double that for 1898. The Oliver's Freehold Mines (Limited), has employed on an average 112 men, and has been opened out considerably, nearly 2,000 feet of driving having been done during the year, and also a considerable amount of stoping. The 20-head battery has been kept continuously going. An 8-drill compressor plant has been erected, and 6 rock-drills have been employed in the mine since August last.

New poppet-heads have been erected, and winding cages and trucks placed in position. The mine is now on a good sound working basis, and the yields for the past year have been more encouraging.

The Queen Mines (Limited), employed on an average 18 men. Two winzes have been sunk below the 405 foot level, the deepest one being about 60 feet below the bottom level, but the results to date have not been very encouraging. The 405 foot level has been driven about 200 feet without striking anything of any consequence; still the Company intend to continue prospecting.

The Great Eastern and Caledonian Gold-mining Company has, during the year, opened out at the bottom of the various shafts, and driven altogether about 700 feet on the lode, and about 1,450 tons of quartz has been put through the Company's mill with varying results. For the last three months operations have been suspended pending the reconstruction of the Company.

In addition to lode-mining a number of Europeans and a few Chinese were engaged during a part of the year fossicking on the Abercrombie and Lachlan Rivers with varying success.

The quantity of gold won during the year on this field is estimated at about 5,600 oz.

##### *Carcoar Division.*

In this Division about 300 Europeans and a few Chinese were engaged in gold-mining and prospecting; showing a result of 1,364 oz. 14 dwt. of gold won, valued at £5,291 19s. 5d., at average prices of from £3 16s. to £4 per oz.

The quartz gold was obtained entirely from the property of the Lyndhurst Gold Field Company (Limited), at Mandurama. The plant in connection with the mine being valued at £30,000. At present it is worked by tributers, who are reported to be doing very well, and at the termination of their agreement it is thought probable that the Company will itself renew operations.

Links

Links and Sons, of Carcoar, are busily engaged in raising ironstone flux—for use at the Smelting Works, Dapto—from a property of theirs close to the township, where they have about twenty men employed. They have, during the year, raised and sent by rail 7,518 tons of this stone, which contains a trace of gold and some 50 per cent. of iron, the value of the whole being estimated at about £6,015.

Eight men were also employed in this Division copper-mining—prospecting work merely.

#### *Blayney Division.*

The principal mining property in the Division is that of the Blayney Mining and Smelting Company (Limited), situated 1 mile from Blayney; and its success has given a great impetus to the business of the town. Further reference to this mine will be found under the heading of copper.

Scarcely any gold-mining has been done in this Division, but there have been 17 applications for gold leases under the Act of 1874, and 5 under the M.P.L. Act.

The applicants for the latter do not care to spend any money in further developing until assured that their leases will be granted. Mr. R. B. Cooper (application 19, M.P.L.), reports having obtained some exceptionally fine samples from his ground.

The gold received at the Blayney branch of the Commercial Bank only amounted to some 16 oz.

#### *Newbridge Division.*

During the year about 48 oz. of alluvial gold has been won on Crown lands within this Division; but no particulars were obtainable as to amount won upon private lands. The continued dry seasons have seriously hampered alluvial mining in the district.

Mr. Collins' mine, "Star of the West," at Sugarloaf, has been working all the year with fairly satisfactory results. He treated 2,400 tons of stone for a return of 845 oz. of gold. Mr. Gates, who has been working on M'Phillamy's private land at Craig Lea, has neglected to make any return.

Aid from the Prospecting Vote was granted to two parties in this Division, but so far nothing payable has been found.

#### *Trunkley Division.*

Only 22 inches of rain fell during the year, which is very considerably below the average of an ordinary season, and consequently there was little or no water for sluicing, while there was only one quartz reef working, viz., "Wright's Reef" owned and worked by Messrs. Crees and Francis.

The drought enabled fossickers to work in the bed of the Abercrombie River, which became a chain of waterholes, only the deep holes having any water in them. Very good results indeed were obtained from the river, which was worked up to November last, but during this month 450 points of rain fell, which brought a fresh down the river and cleared the diggers out. The amount of gold won—alluvial—was 833 oz. valued at £3,124, and only 200 oz. valued at £750 were won from reefing.

About 300 men find employment mining in this Division. They cannot all be called regular miners, but whenever they can get wages prefer working for them than seeking for gold. During the year some of those fossicking earned high wages, while others only made a bare living. Many went away to work on the deviation of the railway line, and others to the copper-mines at Blayney and Burraga.

Five applications, each for 100 acres, were lodged for special gold leases for dredging in the Abercrombie. The surveyors have just completed the survey thereof.

At Pharoah's Flat, Messrs. D'Arcy and party have a 25-acre extended alluvial claim on the bank of the Abercrombie River. They have been doing a lot of dead work in cutting water-races, &c., which, together with the drought, prevented them from doing very much sluicing. They treated 120 loads for 17 oz. of gold.

Crees & Co.'s battery at Wilson's Reef, a 9-head stamper, valued at £450, is the only machinery now on the field. On private land—principally the Kempfield Estate—there was a stir in mining, but the reaction has set in. On this estate 43 authorities to enter, under the Mining Laws Amendment Act of 1896, were granted. On this estate the gold was very patchy. Several persons, viz., Platt, Davies, Schultz, Crawley, Pound, and one or two others, got fair gold, while others got very little. As far as I have been able to ascertain, 166 oz. of gold, valued at £622, were won from this estate, the want of water being a great drawback; many persons did not thoroughly prospect their areas, but abandoned them.

One hundred and seventy-four (174) miner's rights and nine business licenses were issued.

Eight gold-lease applications, total area 516 acres, were lodged, and one mineral lease application, area 40 acres.

Under the Mining on Private Lands Act, 120 applications for authority to enter were received. Seventy-nine (79) authorities to enter, total area 185 acres, were granted. Three lease applications, area 35 acres, were received. The total revenue collected under this Act was £44 15s.

About seventy men were mining on private lands during the year.

#### *Tuena Division.*

It is estimated that 1,262 oz. of gold were obtained in this Division, the value being about £4,734. During the year Mr. Opie, for an English Company, secured some leases on McKenzie's freehold estate. 400 tons of stone were raised, a ten-head battery was erected, 250 tons of ore were treated, returning about 15 dwts. to the ton. The balance of the ore will probably be put through the mill at an early date, there now being plenty of water. At Tuena, Junction Point, Victoria Flat, and Markdale, mining has been carried on in a half-hearted kind of way. The dams being empty, the batteries could not work; there was no water for sluicing or for prospecting purposes.

In the bed of the creek some rich alluvial claims were worked, and the miners were found unwilling to divulge the amount of gold won.

Much of the gold won in the district has been from private lands, and during the year 30 applications for authority to enter were received, covering an area of 55 acres.

To the west of Tuena, and close to the police paddock, a prospecting party has been working on a small but rich vein of scheelite. The vein is very narrow, and in hard country.

The number of miner's rights issued in the Division was 301. Three dredging leases upon the Tuena Creek were applied for. The creek is narrow, and there is a large area of freehold along its banks, which may possibly cause some difficulty in the future.

#### *Rockley Division.*

Mining matters in this Division have not been as brisk as in the preceding year. Owing to the continued dry weather, alluvial mining in the old creeks was much hampered and almost abandoned. However, at Back Sewell's and Native Dog Creeks, about £2,500 worth of gold has been obtained by fossickers.

The chief mine in the Division is the Mount David, which produced 2,886 oz. of gold from 5,844 tons of ore. The mine on the whole looks well, and the directors speak very hopefully of its future. Eighty men are employed; and during the year the main shaft has been sunk to 225 feet.

At Caloola Creek a battery and two Huntingdon mills are being worked. The ore is soft, low-grade stuff, which is now being worked at considerable profit, there being abundance of water available in the new dam recently erected by the Department near these properties.

#### *Burraga Division.*

Very little has been done in gold-mining in this Division during the past year; the dry season and want of water having proved a great drawback to the industry. Only about 150 oz. of gold was obtained in the district.

At Golden Gully things are likely to take a more favourable turn. Donald M'Vicar, who has been prospecting in the locality for a number of years, struck a very rich leader towards the end of the year. In a few dishes he got about 5 oz. of specimens, some of them weighing half an ounce of gold when crushed. The battery belonging to Mindham and party, which had been idle the whole of the year, was started again during December, and crushed 3 tons of stone for M'Vicar for a return of 8 oz. 13 dwts. of gold. The reef is increasing in width as it goes down, and great things are hoped from it in the near future. Three leases have been taken up. There are a few alluvial fossickers making a living on the Isabella and on the Little River.

At the junction of Fell-timber Creek with the Little River, Mr. Hutchens, formerly manager of Mt. David, has had men prospecting for a considerable time. Some ore was discovered which he considered good enough to justify him taking up two 25-acre leases. The nature of the vein being explored is quartz, heavily charged with iron and copper pyrites and argentiferous galena. Two shafts are being sunk on the vein, one on the east and one on the west side of the river. At the end of the year these had reached a depth respectively of 23 and 35 feet. No bulk tests have yet been made, but assays of the pyritous ore have given from 3 dwt. to 206 oz. per ton of gold, and from traces to 29 per cent. of copper. Mr. Hutchens anticipates that his find will develop at depth into a lode of argentiferous galena and sulphide of copper, and it is to be hoped that his enterprise may prove successful.

The principal mining done in the Division is for copper, particulars of which will be found under its proper heading.

#### *Oberon Division.*

The mining industry in this Division for the year just ended has not been characterised by any marked activity. The number of miner's rights issued was 174—23 being for the whole year and 151 for the half year. The quantity of gold won was 308 oz. 7 dwt. 6 grs., valued at £1,150 5s. 6d. Eight persons have received aid during the year from the Prospecting Vote. In one case, the prospectors, Clarke and party, of Slippery Creek, are about to sell to a syndicate at a satisfactory figure; they have raised 50 tons of ore, some of which was forwarded to Germany for treatment, the result not yet known. Their shaft is down a depth of 120 feet, and the width of lode is 4 feet.

Buckland and party of Black Bullock Mining Company have raised 1,800 tons pyritic sulphide ore, 1,077 tons of which was forwarded to Dapto for treatment with extremely satisfactory results. The balance of the ore is at grass awaiting transit to Dapto. The depth of their shaft is 120 feet; the width of lode 31 feet. They have done a great amount of prospecting during the year, but with little progress. Thrush and party, of Black Bullock Mountain, are now erecting machinery for the treatment of a quantity of ore at surface. There has not been much work done by this party during the year.

John Mitchell and party, of Slippery Creek, raised 80 tons of ore, but crushed only a small percentage. Water in this locality being very scarce, they were unable to proceed with their crushing. The depth of their shaft is 70 feet, and the width of the vein averages from 1 inch to 1 foot. Lightfoot and party, who are mining on private property at Charlie's Creek, erected a small quartz-crushing machine with four head of stampers, and put through 42 tons of ore, with very unfavourable results. The depth of their shaft is 40 feet; width of vein, 4 inches.

The outlook for the coming year is promising.

#### *Bathurst Division.*

Mitten and party (late Sinclair and party), Clear Creek, have crushed during the year 70 tons of stone, yielding 421 oz. of gold, but as the average width of vein is only 4 inches the cost of obtaining the gold-bearing stone is very high.

Promising prospects having been obtained at Clear Creek (about 10 miles north from Bathurst), by a prospector named Pears. The find was on portion 28, parish of Peel, county of Roxburgh, the property of Miss Edith Walker, of Concord. A small rush took place, and applications for authority to enter, numbering 83, were lodged during the last two weeks in December; but, though the sinkings are comparatively shallow, time would not allow of the ground being tested up to the closing of the year.

#### *O'Connell Division.*

There are about 50 men fossicking in this Division for alluvial gold, on the Fish River and about Wiseman's Creek.

Brockbank and party, who have an extended quartz claim situated at Breakfast Creek on the "Blackfellow" line of reef, have reached a depth of 140 feet, and have about 70 tons of stone now on the surface. A trial crushing of 6 tons yielded 12 dwt. of gold to the ton. Two men are employed at the mine.

#### *Wattle Flat Division.*

At the Big Oakey Consolidated, which includes the Frenchman's O.K. Mines (quartz reefs), the number of men employed was 16. 425 tons of quartz raised yielded 214 oz. 4 dwt., valued at £757 10s. The depth of shaft is 780 feet from surface to deepest workings; but, owing to vein being almost flat, the deepest level is only about 240 feet vertically from surface. On the underlay the deepest level is 740 feet. The width of reef varies from 6 inches to 11 feet, and underlays about 30°, bearing N.W. and S.E.

In order to make the above return of any value in gauging the ore values of the district, it should be mentioned that owing to the finely divided particles of free gold contained in the Oakey ore, a very big loss results in slimes and tailings. Throughout each crushing, samples of tailings and slimes were taken at the end of the blanket streaks every hour, and the assays of samples so taken show an even loss in tailings of from 3 dwt. 2 grs. to 3 dwt. 11 grs. The loss in slimes approximates to 12½ dwt. per ton of ore; the assays varying from 1 oz. 18 dwt. to 4 oz. 7 grs., and the percentage of slimes also varying according to the proportion of chlorite schist in the ore. A sample of the ore that showed a loss of 4 oz. 7 grs. per ton of slimes was sent to the Department for examination.

The Solitary Mine was taken in hand by Myring and party on 27th August. Seven weeks constant bailing drained the workings, and contract parties were put in stoping at the 300, 364, 414, and 480 feet levels. Work has been constant, with from 25 to 30 men employed. From the end of October to 31st December there was approximately 189 tons raised and crushed at the 6-head battery known as Brailey's, but recently bought by the above party.

At the Caledonian Mine, Crawford Bros., the deepest level is 140 feet; the reef being about 7 feet wide, and estimated as worth 8 or 9 dwt. per ton. A 10-head battery is now being erected about a mile from the mine. As it is the intention of the party to keep the battery constantly at work, this mine should in the future provide work for a good many men.

At Reilly's Creek Mine, work during the year has progressed in a satisfactory manner. A large quantity of stone has been put through the battery with good results.

At Whalen's Hill, Campbell's, a number of men have made good wages during the year.

At Heagney's Reef, Bullock Flat, the deepest shaft is 180 feet; deepest level, 170 feet; and width of reef from 3 inches to 3 feet. It has been worked by a small party of tributers during the year, and 91 tons of ore was crushed for a return of 42 oz. 7 dwt., valued at £168 9s. 6d.

A number of smaller veins have been worked in the Division with varying results.

In alluvial mining a number of men have been at work, the average earnings being small. Most of the sluicing claims have been idle all the year owing to scarcity of water.

#### *Sunny Corner Division.*

On the whole the prospects are brighter than they were last year. The very dry weather during the early part of the year greatly retarded sluicing; and even now water for that purpose is scarce.

Great difficulty is found in obtaining anything like an accurate return of the gold won in the Division, as the fossickers keep no record of what they win; nor have they any particular place where to dispose of the gold won, a good lot of which is sold to travelling peddlers. The Paddy Lackey Proprietary are working on a reef varying up to from 5 feet to 6 feet thick, and returning good results. This company has erected a splendid cyanide plant during the year, by which their tailings are treated, and it has given excellent returns for the outlay.

The Paddy Lackey Deep Level Company, adjoining, has expended a large sum of money on machinery. They have now sunk to a depth of 526 feet, showing what perseverance can do in such a wet shaft. The Company has started to cross-cut since they struck the reef, which is showing splendid looking stone. Of course it is the same reef which the old Paddy Lackey Company has been working, but at a deeper level, and is no doubt rich.

Messrs. Murray and Lean are still working the Big Hill, which appears to be inexhaustible.

Turner and Anderson and Odgers and party, on the Little Hill, are on a good reef.

There are several leases taken up on Reedy Creek and on the Paddy Lackey line by the Great Extended Company of Hongkong.

A new battery is being erected on Bob's Creek, which will prove a boon to the public, as the only battery on the field which can be conveniently used is the one on Mitchell's Creek.

The

The Lagoon Company, after expending a large amount of capital in the erection of machinery, has been at a standstill for the greater part of the year.

A very good reef has been struck on the Bushrangers' Mount, about 5 miles east from here, which promises to turn out well. About 220 miners find employment on the field, about 100 of whom are on alluvial and the others on reefs.

There is about £27,940 worth of machinery in the Division. The old Sunny Corner Silver Mining Company's plant, judging from present appearances, has been idle for a considerable time, and likely to remain so. To start this company's works will necessitate a very large expenditure for new plant.

#### *Orange Division.*

At the Wentworth Proprietary Mine, Lucknow, the works have been under partial suspension for some time, as, owing to the lack of payable ore, the company have been unable to raise fresh capital to carry on the extensive prospecting which is the characteristic of this mine, the payable ore being only found in bunches or shoots. An experienced geologist and mining expert has come from England to thoroughly examine the mine. This is probably the outcome of Mr. Lock's visit to the Home Country.

From 130 to 300 men have been employed at the above mine during the year, and 1,800 feet of new work, consisting of winzes, rises, drives, and cuts, and diamond drill bores, has been done, of which 756 feet was done by contract. £12,872 worth of gold has been won, but not all from newly mined ore. The company erected a slimes cyanide plant, which, unfortunately, has not proved a success, owing to the fact that the slimes take more than sixty hours to settle after agitation with cyanide solution. Experiments are still being made, and a parcel of slimes is awaiting treatment in Melbourne by a machine invented by Messrs. Draper and Riley, who claim that they can extract clean solution and leave the residues practically dry. If this machine can do what they state it will, the work of treating the slimes will be at once resumed; if not, the solution will have to be extracted with filter presses. The extraction of gold from the few tons treated was 90 per cent. There is an immense quantity of tailings, some 50,000 tons, and it was hoped that the proceeds from these would have provided the capital which it is now found necessary to raise otherwise. The year's work in this mine produced 3,306.5 oz. of gold, valued at £12,872. This is a very large decrease on the output for 1898, but early in the present year (1900) a rich find was reported at the 500 foot level—as good as ever—which proves that the mine is far from worked out. To get at the new find will, however, entail a great deal of dead work.

At the Aladdin's Lamp Mine, adjoining the foregoing mine, 846 feet of similar work has been done during the year, 272 feet of which was done under contract. The number of men employed during the year was from 29 to 74. The bullion obtained was 5,702.8 oz., the value being £22,210. This mine is worked in conjunction with the Wentworth Proprietary.

The Wentworth Company are carrying on a mine near Stuart Town, of which, although out of this district, a short account is here given as exemplifying their persistency and enterprise. Since reopening up the mine in June last, a new main shaft, 16 ft. x 3 ft. 6 in., has been sunk 160 feet from the surface level. Here a crosscut, 6 ft. 6 in. x 4 ft., has been driven 81 feet, and a shaft, 9 ft. x 3 ft. 6 in., sunk a further distance of 77 feet, making a total in all of 237 feet. The shaft is close timbered to a depth of 125 feet. A poppet-head of Oregon timber, 40 feet high, has been erected. A ten stamp battery, with rock breaker, &c., is in course of erection, whilst winding engine, boilers, and air compressing plant are all laid down. A dam has been constructed by means of puddle and clay embankment 235 feet long, 15 feet high in centre, with a base and top of 75 feet and 25 feet respectively, capable of conserving 6,000,000 gallons of water. One mile of close panel fencing has been erected round the claim. Nearly all the necessary fittings and castings have been turned out of the fitting shops at Lucknow.

The Wentworth Extension at Lucknow is still vigorously prospecting on one lease, two others being allowed suspension.

At the Darcy Estate Mine at Lucknow, little or no work has been done during the year; but arrangements are in course of negotiation for its management to be taken up by Mr. Newman, M.L.A. when work will begin again at once.

The Homeward Bound, north of the Aladdin is being sunk on with English capital.

The Wallaroi Lease is also being worked.

These are all in the Lucknow supposed line of contact of the basalt and serpentine. Should payable gold be struck in any of these mines, no doubt a large amount of labour would be absorbed, and good results be obtained.

The Blethington has been worked for five years with no profits. The work done during this year consists of plat and winze sunk 50 feet; two drives 40 to 50 feet, at 150 feet level, cleaned out and driven; and a lot of dead work. No gold has been won by crushing. Three men were employed, but at present suspension for four months is in force. It is intended to liquidate the old company and to reform.

During the year a rush set in for the ground on Rosedale Estate, and adjoining C.P.'s and C.L.'s, which involved very heavy work upon the Warden, owing to the amount of preliminary work which had to be done before the issue of authorities. One or two of the claims are still being worked but, owing to the very uncertain state of the country, there has not as yet been sufficient development to disclose any permanent lode or reefs, which would justify any large or extensive outlay in the way of machinery and plant, which would be necessary to treat the ore. Mr. Pittman has made a report on this field. Moppett's mine is at present the only one turning out anything sufficiently payable to remove from the field for treatment. Mr. Moppett is now taking out a further crushing, and the stuff is likely to maintain its original standard, about  $\frac{1}{2}$  oz. to the ton, with 6 to 8 dwt. of gold per ton in the tailings. £1,165 worth of gold has been obtained from 362 tons of stone.

At the "Ballarat of New South Wales," Forest Reefs, a shaft has been sunk 241 feet, No. 1 drive driven 57 $\frac{1}{2}$  feet, and No. 2 drive driven 500 feet to No. 5 bore. There wash was obtained, and late dish prospects went 17 $\frac{1}{2}$  dwt. to the load. The trend of the lead has not yet been established. The water in the mine is very heavy.

No information respecting the "Victory" has been obtainable, but it is believed the company are still on good ground, and that the wash is improving. The ground is very wet and difficult to work in consequence.

At the "Great Lumpy" they are still prospecting.

Slaterry's and many other mines are working on the supposed leads under the heavy deposits of basalt in this part of the District.

The Coolgardie Gold Syndicate, at Cadia, has done large amount of work, and are now under suspension pending the erection of machinery.

Some prospecting has been done at Amaroo, and although, as yet, without payable results, the prospects are considered very good.

In the Byng portion of this district work is completely at a standstill, fresh capital being wanted. One or two marvellously rich finds have been made, but, as a rule there is no permanency about them.

At Palmers Bulga, and Digger's Flat (Cassidy's line of reef), a number of claims and leases have been taken up during the year, and about 150 men are working, but not with any great success. The principal mine belongs to the Great Ophir Gold-mining Company, and from 242 tons of ore mined 237 oz. of gold was obtained, of the value of £775 6s. 1d. This was the work of four men for 12 months.

Another mine close by gave a return valued at £225, from 100 tons of ore.

At Ophir everything is shut down, Mr. Slater having sold his battery at the Bluff, and the same has been removed. There are a few prospectors and fossickers at work, but with very intermittent results.

At Lewis Ponds no work is being done of any consequence.

Generally speaking the mining interest in this Division has progressed during the year. Numbers of men have obtained employment, and there has also been a large increase in the number of lease applications received, and miners' rights issued.

#### *Molong Division.*

There has been little work of any importance done in this Division during the year. Under aid from the Vote, Williams, at Copper Hill, and Delaney, at Gumble, have been doing some prospecting work for copper, reference to which will be found under that heading.

Thirty-four miners' rights were issued during the past twelve months; but, as far as can be learned, no metals or minerals have been won in the Division during that period.

Mr. Black, of Molong, crushed 50 tons of quartz, brought from other places, for a yield of 37 $\frac{1}{2}$  oz. of gold, valued at £131 5s.

No additional machinery, for use in connection with mining, has been erected in this Division during the year.

(Miners engaged in over-hand stoping.)

## MUDGEE MINING DISTRICT.

*Cobbora Division.*

During the year, about 90 miners only were employed in this Division in alluvial mining, principally at Tucklan. The quantity of gold won was 865 oz. 4 dwt., valued at £3 15s. per oz.

The want of water has again been the great drawback, and only about 1 inch of rain has fallen within the past five months. Water for domestic use has to be carted a distance of 4 miles, from wells sunk in the Tucklan Creek, to which place the washdirt has also to be carted. Owing to this scarcity of water work was almost suspended during a good part of the year, and many of the miners were obliged to leave the field. A return of wet seasons would probably mean a revival of mining work, as there is much untried ground in the locality that should pay to prospect; but, owing to the porous nature of the ground, water cannot be conserved for any length of time, save in wet seasons.

Some loads of washdirt treated have yielded as high as 2 oz. to the load, others as low as  $\frac{1}{2}$  dwt. to the load.

At Tucklan, there are large deposits of what is termed cement, which has been proved to be payable, as Tyler and party have been carting some tons to Chappell's Battery, at Tallewang, 9 miles distant, the crushings from which averaged 7 dwt. to the ton.

*Leadville Division.*

Little or no gold-mining has been carried on in this Division during the year. A few men have been engaged prospecting and, at odd times, in fossicking for gold at Sawpit Gully, near Wargundy, with, it is thought, poor results—perhaps tucker.

*Gulgong Division.*

The gold yield for this Division shows a marked decrease. Reefing operations are almost at a standstill. In the early part of the year some good alluvial gold was discovered in new ground (Crown lands) at a place known as the Diamond Mines, and for some months about 400 men were working and camping on the field. Several claims bottomed at a depth of about 30 feet on wash that, for a time, yielded from 10 to 15 dwt. per load, but the rich area was small, and was soon worked out. About 60 men are, however, still making a living on the field.

On Mr. Rouse's private land near Guntawang, and on Mr. Murphy's freehold at Slasher's Flat, small rushes occurred during the year, and for four or five months about 60 men were making fair wages on these areas, but the ground is now almost worked out, three or four parties only working at end of year. The work on these private lands was carried on under provisions of section 33 of the Mining on Private Lands Act of 1894.

No quartz mining of any importance is at present being carried out in the Gulgong Division. The Royal George Gold-mining Co. erected a battery on their property in the early part of the year, and several parcels of stone were crushed, but the results were disappointing, and the mine is now closed down. On the Happy Valley, Shellback, and Red Hills Mines, very little work was done during the year.

The Salvation Hill Gold-mining Syndicate has sent a parcel of stone to London, and Mr. Frame Fletcher, it is understood, has the property in hand for flotation. The greatest depth attained in this property is 163 feet, through very hard country.

*Hargraves Division.*

During the year mining has not been successfully carried out in consequence of the scarcity of water. The Merroo and Grattai Creeks have been virtually dry, and therefore the fossickers have been compelled to seek some other means of living until rain comes to start the creeks running. There are a great number of men who get their living by mere fossicking, as the alluvial mining is practically abandoned in this portion of the district, in which, therefore, the prospects of the mining industry are not at present very encouraging.

The Saddle Reefs Syndicate has been for the past twelve months working very constantly, and has had Government aid. The prospects of the mine proving a paying concern are not too promising. During the past twelve months they have crushed 1,000 tons for a return of 400 oz. of gold.

W. H. Bond is still successfully working his lease, and makes a good living.

Frame Fletcher is still persevering with the Eldorado Hill, and is at present putting a tunnel through it, which is now in 300 feet. A few small veins have been cut, and in some of them traces of gold have shown.

James and Thomas Laing have put through their battery, during the year, 1,700 tons of quartz for a yield of 935 oz. The stone treated has principally been taken from the different leases around Hargraves and Tucker's Hill.

During the year Hogan and party discovered a new reef on Tucker's Hill which at first looked really well, gold showing freely in the surface stone. Their first crushing went  $1\frac{1}{2}$  oz. per ton, but as they went deeper on the reef it was not so good, and the last crushing they had only yielded 15 dwt. per ton. Several leases were taken up on Tucker's Hill during the year, but Hogan and party are the only ones working at present. No doubt the other lessees are waiting for Hogan and party to further develop their lease before starting operations.

Mr. Scott, manager of the Hampden Syndicate Mine, has had the mine constantly worked during the year, and Government aid was granted this party to put a tunnel through the hill on the Homeward Bound, but with very poor results. It is hoped, however, that the mine may ultimately pay well.

The quantity of gold purchased during the year by the storekeepers is estimated at 596 oz., amounting to £2,285 5s., a decrease of about 267 oz. on the year 1898.

A number of special leases have been taken up in this Division during the year for gold-dredging purposes.

*Mudgee Division.*

During the past year a fair amount of prospecting has been carried on with but poor results, with the exception of at Apple Tree Flat, where about 20 miners are making fair wages at alluvial mining. The Log Paddock Boring Syndicate, from whose operations much was expected, report that the only machinery at the mine consists of a whim, valued at £25; that work has been carried on during the year at a cost of £600; and that the return to date consists of 1 oz. 19 dwt. of gold.

The Royal George Mine is not being worked at present, and no reply to inquiries made has been received from the manager. At Rat's Castle Mine no work has been done during the year, and a ten-head stamp battery, valued at £200, is there lying idle. A great number of the claims have been abandoned, and, taken as a whole, the mining in the Mudgee Division has not been as profitable as in the year 1898.

A fair amount of money has been granted as aid to prospectors throughout the district, but no good results therefrom have been recorded. All the available river bed has been applied for as special gold leases, and in one or two instances it is thought very satisfactory results will be obtained. The rainfall for the year has been much below the average, but storms towards the end of the year enabled a good deal of fossicking to be carried on in the gullies, where, otherwise, such work could not have been carried out. Several of the claims on the creeks around Capertee, in the south-east corner of the Division, have also recently bottomed on good gold, and a number of miners at present find employment in this neighbourhood.

*Windeyer Division.*

Mining matters have not been very brisk during the past year in this Division, owing to the exhaustion of the alluvial gold, and also the scarcity of water. From Messrs. Winter Brothers' claim, the Golden Lily, very profitable returns have been won. They have crushed 620 tons, yielding 750 oz., value £3,000. They have erected a fine crushing plant, with engine and five head of stampers, valued at £500, and intend to enlarge the machinery with an extra five heads of stampers. At present they employ 12 men, and have about 1,000 tons of quartz on the ground; but, owing to scarcity of water, have had to delay further crushing. Messrs. Liebertrett and party, of the Henrietta Claim, have just completed erecting a crushing plant, valued at £2,000, and consisting of engine, pumping machinery, and five heads of stampers. They have crushed 320 tons of quartz for a yield of 375 oz. 10 dwt. 6 grs.; value £1,502.

W. R. Leffley, of the Eclipse Mine, have not done very much during this year, as the stone is very poor and requires capital to work it. They have crushed 139 tons of quartz for a return of 33 oz.; value, £127 8s.

The Jubilee Claim is at present at a standstill, owing to the poor return of gold. During the year they crushed 100 tons, which yielded only 20 oz., valued at £70.

The alluvial miners are scattered over a large area of the Division, most of them working in the old beds of the creeks. No new ground has been discovered during the year, and the individual earnings of most of the alluvial miners are very small—few of them making more than a bare living.

About 1,979 oz. of alluvial gold has been bought by the local storekeepers, valued at £3 17s. 6d. per oz., and about 1,178 oz. of gold won from the various leases, valued at from £3 18s. to £4 per oz.

Better returns are expected from the quartz reefs during the coming year.

Leases for gold dredging purposes have been taken up by Murphy and Struthers, but so far no work has been performed on these.

#### *Peak Hill Division.*

At Peak Hill there are five mines working—The “Proprietary,” “Wythe’s and Mooney,” The “Crown of Peak Hill,” “The Great Eastern,” and the “Bobbie Burns.” The Proprietary Mine owners during the last twelve months have been engaged in sinking and putting in drives, prior to stoping, and there are large bodies of ore ready to be broken down. The manager, Mr. Cross, is now erecting water-jacket and blast furnaces to smelt the refractory ore. Not much ore has been treated during the past year, but the time has been usefully employed in experimenting on the best method of dealing with refractory ores and in putting the mine in order so that the ore may be taken out on an extensive scale.

Wythe’s and Mooney’s mine has been let on tribute and the tributers have taken out a good deal of free ore with very satisfactory returns. This company has also devoted a good deal of time and money to find out the best and cheapest methods of dealing with refractory ores. The ore in all the mines on Peak Hill exists in chutes, and so far as is known, it is poor, but there is good reason for thinking that it will improve with depth, in fact, it has improved. These ores also contain about 2 per cent. of copper, which should assist to defray the expense of smelting.

The “Crown of Peak Hill” has been put in thorough working order. The main shaft has been re-timbered and the old workings secured with the view of sinking on the old “Great Eastern” lode. The owners have recently sent away 25 tons of ore from the main lode to be treated at Dapto. This mine is now in good working order, and in readiness to break out large quantities of ore. It has also a cyanide plant in course of erection, capable of treating about 60 tons of tailings per week.

In the “Great Eastern” mine, which is let on tribute, the tributers have broken and crushed a good deal of ore, but the returns are not so satisfactory as those of previous years. In this mine there are large bodies of pyritous ores in sight, but so far the syndicate have not attempted to treat them.

In the “Bobbie Burns” mine, which is also let on tribute, the tributers, it is stated, have made a little more than wages during the past year.

At Peak Hill there are a number of cyanide plants, treating on an average 200 tons of tailings a week. These tailings are all from the local mines. Although the returns of gold from this Division will probably be less than the returns of 1898, it is anticipated that the returns for the present year 1900 will be much larger as great trouble and expense has been incurred to produce and treat great quantities of ore in the different mines. The alluvial in this division is all but exhausted, unless new discoveries are made; probably 100 oz. would cover the amount of alluvial gold won during the past year.

At Tomingley, from the mine known as “Paton’s lease,” 340 tons of stone have been crushed during the past year, for a return of 301 oz. of gold—60 tons from Madden and Cavanagh’s mine gave a similar yield per ton; besides these there have been small crushings from other mines, averaging from 10 dwt. to 1 oz. per ton.

At McPhail, a very extensive mining property belonging to the “Myall United Gold-mining Company” has 150 men employed; the manager reports that during the past year he put over 30,600 tons of quartz through the company’s battery of 40 stampers; the tailings being treated in their cyanide vats, which have a capacity of 3,000 tons per month. The return was 4 dwt. per ton for the combined treatment. This seems small, but it is payable because of the large quantity of stone treated. Moreover, the company has one of the most complete and up-to-date plants in New South Wales, including rock-breakers, compressed air drills, automatic feeders and other labour saving appliances. The tailings are removed direct from the battery tables to the cyanide vats by means of sand pumps, and the manager claims that the cost of breaking the ore and treating by battery and cyanide is the most economical of any mine in the Colony.

#### *Wellington Division.*

The recent alluvial find at Jawbone has caused some stir amongst diggers, and at the time of the Warden’s the last visit there were about 300 men on the ground. There have been no washings in bulk yet, the yields—from prospects—should be from 2 dwt. to 1½ oz. to the load. The average depth is about 80 feet. There are about 8 or 9 claims on payable gold and a large number have bottomed “duffers.” There have been application to the Government to resume private lands here, but so far, the local Warden has not seen sufficient reason to justify him in recommending this. During the year over 100 applications for authorities to enter under the Mining on Private Lands Act were received at the Warden’s Office.

The issue of miners’ rights at Wellington also increased considerably in consequence of the Jawbone Rush. About 30 applications for dredging leases were received for areas upon the Macquarie River. It is believed the industry will prove profitable on the Macquarie to at least as far down as Wellington.

The only quartz mining of any importance in this Division was that done on the Mitchell’s Creek Freehold Gold Estate, where about 230 hands are employed. Some 14,176 tons of ore was raised and treated for a return of 8,485 oz., valued at £29,017.

### TAMBAROORA AND TURON MINING DISTRICT.

#### *Hill End Division.*

The yield of gold for this Division during the year just ended, shows a large decrease on that of the previous year, principally in the quartz gold. This is owing to the fact that the Tambaroora Creek Gold Mine, Limited, have not worked their mine during the year. All the gold has been won by small parties of miners. Most of the quartz gold having been won from Hawkins’ Hill, some of the stone yielding up to 12 oz. to the ton. During the year about 200 Europeans and 56 Chinese have been employed in alluvial mining—fossicking and sluicing—who have won 1,898 oz. 6 dwt. 8 grs. of gold, valued at £7,261 1s. 2d. It is impossible to give an estimate of the quantity of wash-dirt treated, as most of it is treated by ground sluicing. About 160 men have been employed in quartz-mining, who have raised 1,163 tons of quartz, which yielded 1,054 oz. 16 dwt. of gold, valued at £4,034 12s. 2d., making the total value of the gold won during the year £11,295 13s. 4d. Messrs. Carver and party have erected an 8-head battery at Hawkins’ Hill, and the prospects there are very encouraging. On other parts of the field there is very little work being done, except fossicking for alluvial gold, and at present this is almost at a standstill owing to the scarcity of water.

#### *Rylstone Division.*

Very little gold-mining is done in this Division. At the cinnabar mine, at Carwell (between Cudgegong and Rylstone), prospecting for this mineral has been going on, at intervals, during the last fifteen or twenty years. During the latter end of the year some further prospecting work has been carried out upon an area of land taken up in the vicinity by a syndicate; but, so far, these efforts have met with poor success.

#### *Sofala Division.*

Mining in this Division for the year 1899 shows an improvement on the previous year in the amount of alluvial gold won, thanks to the commencement of gold-dredging operations; but the quartz-mining industry has been all but abandoned.

Alluvial surface sluicing has again been greatly hampered and, at times, brought almost to a standstill through the scarcity of water, which difficulty has been increasingly felt during the past two or three years, and no return of gold obtained by such means is available. The old alluvial deposits have been so often worked over, it is now difficult for even able-bodied and practical men to exist on the gold won from such ground.

(Since, extended.)

SURFACE WORKS, "MYALL UNITED" GOLD MINE, MCPHAIL, N.S.W.

"MYALL UNITED" GOLD MINE, MCPHAIL N.S.W.  
(View in Engine Room.)

Several parties have been working at the Upper Turon and Palmer's Oakey in the various old workings, but with what results no information was obtainable; it is believed, however, that the majority of them have had a hard struggle to make wages. Sinclair and mate obtained 27 oz. of gold in two weeks from their claim in Dam Creek. Knight and Gale in four weeks unearthed a 13-oz. nugget also several smaller nuggets in Jew's Creek, making a total money value of £130. These have been the most successful parties in this Division during the year.

The Turon River Gold-dredging Company commenced sluicing operations on the Turon River about the middle of June last. The plant in position consists of a floating pontoon carrying a 20 h.p. boiler and 16 h.p. engine, steam winches, small donkey engine, &c., valued at £6,000. Work has been carried on vigorously since the commencement of operations, the large quantity of 69,000 cubic yards having been raised, and gold won amounting to 701 oz. 15 dwt., money value, £2,500. The same company has a second dredger under construction three miles lower down the river from Sofala, to cost £6,500. The success of these dredging operations is considered the principal event of the year, from a mining point of view, and many special leases have been taken up for similar purposes. Should the prospects obtained on them equal those of the above-named company, it will be the means of furnishing work for a large number of men, and restoring something like prosperity to the district.

The Razorback Gold and Antimony Company stopped work early in the year, and the engine has been removed from the mine.

No mining operations have been carried on in the locality of Back Creek for some months past, and the lease formerly held by Elkin and others has been abandoned.

The Queenslander Company and Turon Gold-mines (Limited), not having obtained payable results, has abandoned its property. The plant has been sold and removed to Wattle Flat.

At "Halpin's Secret" gold-mine at Box Ridge, no work is being done at present, pending the erection of a 5-head battery, which small battery is said to be sufficient for developmental purposes. Lessees expect to commence work about the middle of January, 1900. Forty-five tons of quartz raised about two years ago, and crushed at Sofala, gave the return of 12 dwt. 12 grs. per ton; also a bulk test crushing of 9 tons at the Clyde Works gave 2 oz. 7 dwt. per ton.

#### *Stuart Town Division.*

The most interesting mining feature in this Division has been the starting of dredging operations by Mr. Garland, on the Macquarie River, some 8 miles from Stuart Town. There has been some difficulty in adapting the plant to the needs of the locality, and several breakdowns have occurred; but now the apparatus works more smoothly. The yield of gold is understood to be satisfactory to the owners, and work continues in progress. During the year there has been a decrease in the estimated yield of gold won within the Division of about 890 oz., as compared with last year, though there has been a slight increase in the yield of alluvial gold. This may be partly accounted for by the very scant rainfall, which has retarded mining operations.

### LACHLAN MINING DISTRICT.

#### *Cargo Division.*

Mount Durward, at Cargo, has been practically abandoned, after the expenditure of £12,000 to £14,000 in machinery the ore having been found to be unpayable.

The New Cargo (late Ironclad) Gold Mining Company is not at present working, but it is hoped that, if it intends to do so, a move will be made in the direction before long; otherwise it will be found impossible to resist the reasonable demands of local residents to be allowed to go on these lands, though it is very doubtful whether the local miners will derive much benefit from such event.

The Capital Gold-mining Syndicate (no liability) is working the property adjoining the New Cargo Gold-fields on the north-east, and prospecting has been continuously carried out on it for the last twelve months. There are five shafts on the ground, of the following depths.—45, 60, 50, 57, and 100 feet, from which various drives have been put in, aggregating about 200 feet. From the 57 foot shaft, within 6 feet of the boundary of the New Cargo Gold-mining Company's ground, two parcels of ore have been treated at the local battery. The first (10 tons) yielded 11 dwt. per ton by amalgamation. The second lot of 60 tons, taken from a lode 9 feet wide, yielded at the rate of 4 dwt. 2 grs. to the ton. In the 45 foot shaft, which is about 300 feet west of the boundary shaft, a vein of ore 12 inches wide is showing in the bottom, and is estimated at a value of  $\frac{1}{2}$  oz. of gold per ton. This shaft is within 15 feet of the boundary of the New Cargo Gold-mining Company's property. At present work is confined to the 100 foot shaft, on the eastern slope of the hill, from which a drive is being extended in the direction of the 45 foot shaft, the purpose being to intersect the western branch of the Ironclad lode, and prove the value of any intermediate veins which may be met with, surface prospects, indicating payable gold deeper down, having been met with.

On the Commonwealth Gold-mining Company, Cargo, prospecting operations have been carried on by McMahon Brothers, for nearly two years, in the endeavour to open up auriferous ore in new ground, and to develop a true fissure lode in connection with the main dyke on the field, which has hitherto been neglected. The principal shaft is down 106 feet, on the underlay, where a level has been driven 13 feet south and 45 feet north, on a vein of ore averaging 18 inches wide. Sixty-nine tons of ore obtained in sinking and driving have been treated at the local battery, which proved the value to be over 12 dwt. per ton; but, owing to the heavy loss of fine gold in the slimes, it cannot be worked profitably with the available method of treatment. Ore from the north end of level, where a new chute was cut, giving an average assay of 2 oz. 1 dwt. to the ton, yielded only 9 dwt. to the ton by battery treatment. The ore in the face is 3 feet wide. A winze is now being put down 30 feet north of the shaft, and at 8 feet below the 106 foot level six samples were taken across the lode which have been assayed with excellent results. The winze is just entering the mineral zone, but, so far, is free from any trace of copper or arsenic, the gold being in common iron pyrites. The width of the lode formation is not known. The country rock is diorite, and the lode a continuation of the fissure opened by the intrusion of the main dyke of porphyry and feldstone. In the ore occasional deposits of white decomposed feldspathic mineral are met with, which invariably carry the best gold. This points to the probability of large deposits of similar material carrying gold being met with in the dyke, which has not yet been prospected; but, from its character and its relation to all the other auriferous reefs and veins on the field, as the main fissure of the country, it should prove both rich and extensive in its ore deposits, as well as permanent in depth.

#### *Cudal Division.*

But little mining has been done in this Division during the year just ended. A fair amount of prospecting has, however, been done—principally at Toogong—though nothing payable was found, and at present only one party is engaged prospecting there.

#### *Forbes Division.*

At Forbes, the principal mine is that to which there has been frequent occasion to refer in former reports, viz., "Sinclair's," now known as the "Lachlan Gold-fields, Limited." The main shaft, 10 feet by 4, is 230 feet deep, and levels have been opened at 70 feet, 150 feet, and 230 feet. The 70-foot level has been driven 850 feet, and is connected with the surface by four air shafts. The 150-foot level has been driven 970 feet, and is connected with the 70-foot level by six winzes. The 230-foot level has been driven 160 feet, and connected by one winze with the 150-foot level. The manager reports that the lode is irregular in width, but is 22 feet in the widest part. The main shaft is equipped with steam hoisting and pumping machinery, and the water, which is saline, makes at the rate of 1,500 gallons per hour. The crushing-plant consists of a 20-stamp mill, complete, with ore-feeders, bins, tables, tailing elevators, and the necessary engine and boiler power. The cyanide plant consists of three 20-feet by 3 ft. 6 in. sand vats, and two 20-feet by 4 feet slime vats, capable of treating 450 tons of sand and 150 tons of slime per month. The "official" returns for the year is 5,613 tons of ore crushed, and 4,287 oz. of gold bullion produced. There are over 100 men employed on this mine.

It may be remarked, in connection with this mine, that it is very unlikely the lode or lodes stop at the north boundary of "Sinclair's Mine," and there are several leases taken up and which are being worked on the line going north. These lodes require a large capital to work them to advantage, but it is a remarkable thing that so far no company has been formed to work these leases, though it is stated that several of them contain gold-bearing lodes at various depths. If an English company can afford to put up very expensive machinery for crushing, pumping, and cyaniding, excavate

excavate large dams, and employ over 100 men constantly for a long period, surely this would justify the forming of a large company with colonial capital to develop the leases which, in all probability, contain lodes as good, or perhaps better, than those now being worked by the "Lachlan Gold fields (Limited)." There is one thing certain that before long these leases will have to be worked or given up, when probably the English company will extend their holding. It would be a great assistance to Forbes and this district if another mine was in full work, capable of employing over 100 men, and this desirable result seems to depend on the energy of the leaseholders, who should lose no time in obtaining capital to develop the valuable property now lying idle.

No mines at present are working at the Pinnacle, and the large plant of machinery has been taken away, the owners being apparently satisfied that the reefs are not payable. At the Ironbarks, 4 miles south of the Pinnacle, only one mine is working—Deane and party. A number of leases are held by them, and until lately 22 men were employed; 8 are working still. The amount of stone raised and crushed during this year was 1,100 tons, for an average return of 15 dwt. The reef is a large one, averaging about 2 feet wide. The stone is crushed at Whitby's Battery, 5 miles distant. This must be a heavy charge on the mine, the cartage and cost of crushing. On the Soldier's Reef, 5 miles north west of the Ironbarks, two leases are working—T. Waddell and party and Sharp and party. The former have had a crushing of 50 tons, averaging 9 dwt. per ton, which is not payable under present circumstances. A battery and cyanide plant are required on this mine. In the latter the lessees have raised and crushed 26 tons of quartz during the past year for a yield of a little over half an ounce per ton. This was not payable, as the expense of cartage—9 miles—and crushing—10s. 6d. per ton—swallowed up all the profit. Very little rain has fallen in this locality during the year, and this has prevented prospecting.

#### *Parkes Division.*

At Parkes the principal mines are the "Bushman's," the "Dayspring," the "Kohinoor" and the "Phoenix." There are several other mines, but at present there is nothing of importance to report concerning them. In the "Bushman's" the present company of tributors commenced work about the middle of April last. They have sunk the main shaft 79 feet, making a total depth of 925 feet. They have also extended the 800 foot level 155 feet, and the 350 foot level 90 feet—making the total distance driven 245 feet. 968 tons of stone have been crushed for a yield of 541 oz. 3 dwt. of gold. The manager reports that the prospects of the mine are good. The number of men employed is 25.

In the "Kohinoor" the main shaft is 550 feet deep. At that depth a level has been driven 167 feet east and 151 feet west—total, 318 feet. A quantity of stone was raised and crushed, together with low-grade ore from the 150 foot level, making a total crushing of 3,795 tons for a return of 2,271 oz. of gold, worth £8,313, or a gross return of about £2 4s. per ton of ore crushed. It is intended to keep the work of development well in advance, and, with this in view, the shaft will be sunk a further depth of 100 feet. Judging by present prospects, this should give more valuable ore than any yet discovered. This company during the year have purchased a cyanide plant, and so far it has proved a profitable investment. A quantity of tailings has been treated for a yield of 1,354 oz. of bullion, worth £4,233. During the year five dividends of 6d. each, amounting in the aggregate to £2,430 7s. 6d., have been paid. Forty-five men are employed in this mine, 9 at the battery, and 7 at the cyanide plant. The prospects of this mine, judging by the directors' and the manager's reports, are very good.

The Phoenix Gold Mining Company's mine in Parkes is worked by a party of tributors—Mackey and party. Early in the year a boiler at this mine exploded, and was completely destroyed. This, however, has been replaced by a 30-horse power boiler, constructed by Messrs. C. and J. Hoskins, at a cost of £275, of which amount £100 was contributed by the tributors. During the year the tributors crushed 520 tons of stone for a gross yield of 903 oz. of gold. The present prospects of this mine are not less favourable than they were last year, and the directors report that there is every probability of the tribute yielding sufficient funds for the company to undertake operations on its own account, when the tribute agreement expires in May, 1901.

The "Dayspring"—This mine, which is situated at the Currajong, 3 miles north of Parkes, has been working about 16 years, and at the present time is let on tribute, 4 tributors being working. The manager reports that during ten months of the year 1899, he raised and crushed 1,052 tons for a return of 402 oz. of gold. This return did not give the tributors more than about £1 a week wages. In this mine more capital is required to deepen the shaft and develop the mine, and until this is available it is not likely any valuable discoveries will be made. The leases contain several reefs, from which payable crushings have been obtained.

#### *Fifield Division.*

Mining in this Division is in a very languishing condition. During the past year, partly, perhaps, owing to the great scarcity of water, many miners who were seeking gold and platinum have left the district. The output of these metals is not half that of past years, nor has there been any new discoveries of deposits. The rainfall has been very small, something over 12 inches only for the year. This has prevented prospecting, and has prevented dirt from being washed, and must have placed miners working on poor dirt in very great straits to obtain a living.

At Carlisle, three quartz claims are working, one with Government aid. Assays give fair prospects, but the claims cannot be said to be payable, and the field is all but abandoned.

#### *Condobolin Division.*

The place where mining is chiefly carried on in this Division is on the travelling stock route, about 3 miles north-west of Condobolin. The principal mine in this locality is the "Phoenix," the property of the Condobolin Gold Mining and Quartz Crushing Company, No Liability. This company has about 15 men employed, and, during the past year, raised 1,400 tons of quartz, for a return of 350 oz. of gold, worth about £787 10s. The gold from this mine is only worth about £2 5s. per oz., being largely alloyed with silver. A considerable amount of work has been done on the lands near Condobolin, but, the reefs becoming poorer at a depth, the results have not been remunerative, and a number of prospectors have abandoned their claims. Others, however, have taken their places.

From the "Mascotte" mine, owned by Grief and party, 25 tons of quartz was crushed during the year, for a return of 36 oz.—worth £3 10s. per oz. The first crushing of 8 tons from this mine yielded 27 oz. of gold, but the remaining ore was of a much poorer quality; in this locality a good deal of prospecting has been done under private agreement. The prospects are stated to be satisfactory. At Cugong no work is being carried on; and at Mount Wilga only prospecting. At Mowabla, 17 miles north west of Condobolin, the Alma Mining Company (Winter's mine) have crushed during the year 136 tons of stone for a return of 72 oz.—worth £280.

#### *Alectown Division.*

At Alectown very little mining has been done, except fossicking, and the quantity of alluvial gold won must be very small. The last year has been a very dry one and very little water is available, at any rate for prospecting purposes, but there are 70 or 80 men always prospecting in this locality, and any day an important discovery may be made. Gold, alluvial or reef, can be found in many places in this Division, but the returns are very poor. Only two reefs have been working during the past year in this Division, the "Emu" (on private land) and the "Monte Carlo." At present both these mines are idle but work, it is stated, will be resumed shortly.

The reef known as the "Emu" is payable, but the ore is poor, so far as is known. In the "Monte Carlo," from which some very rich stone, yielding as much as 30 oz. to the ton, has been obtained, work has ceased. A great deal of work has been done in this mine but no permanent reef has been found. The lessees have been called on to show cause, but they still desire to further prospect the mine when they can raise more capital. It is to be trusted that work will be resumed shortly; the prospecting has only been in the "Monte Carlo" lease; and, north and south, the reef has not been sought for, except close to the main shaft.

#### *Grenfell Division.*

The principal work carried on throughout the year in this Division has been prospecting, and one of the leading events was the discovery, by Stiff and party, of good payable alluvial gold on E. J. Toohey's settlement lease, Waraderry, situated about 16 miles in a north-westerly direction from Grenfell. This discovery has given a great impetus to alluvial mining, and afforded work for a number of miners. At the end of the year two other parties had bottomed shafts and expected daily (from prospects) to report payable gold. If prospects continue to be as good as they now appear to be, in all probability a very large alluvial field will be opened. The gold-bearing wash was struck at a depth of about 160 feet.

At

SURFACE WORKS, NEW BUSHMAN'S GOLD MINE, PARKES N.S.W.

At Sandy Creek Messrs Whithy and party are continuously at work, with very satisfactory results. They have two crushing plants, and employ altogether about 20 hands. Referring to the quartz mines around Glenfell, some of them have been working throughout the year, but mostly prospecting at the different levels. *Re* alluvial land,—Holten and party have been continuously working at Eureka Flat, and as far as is known have obtained from 5 dwt. to  $\frac{1}{2}$  oz per load. Other parties at work at the same locality have not been so successful.

Beverne's battery and also the "Enterprise" have treated between them 1,050 tons of quartz, yielding 256 oz.

There were, at the commencement of the year, three cyanide plants at work. Unfortunately the principal one was burnt to the ground, when in full working order, and the stoppage of operations caused a number of operatives, carters, and drays to be discharged. The other two have been constantly at work; and throughout the year have treated about 25,000 tons of quartz tailings for a reputed yield of 1,720 oz; this result is approximate only as it is believed that some of the gold was sent through private sources to Sydney.

#### *Murrumburrah Division.*

During the past year 863 oz of gold were won in this Division—nearly all from alluvium. Mining is principally carried on along the Cunningham Creek. At times the miners do fairly well and can always make enough to keep them.

The Crown Point Gold Mines (Ltd) of which Mr James is manager, is the only mine worked by machinery in this district. At present they are closed down in order to sink the shaft, now 200 feet deep, to the 400 foot level. When the mine is in full working order again they will have from 30 to 50 men employed.

There is a good deal of fossicking going on about Cullunga and Murrumburrah, but in all of them not more than 100 men are employed. On private lands, at Cullunga, the Christmas Gift Mine is being worked by the owners, Boxsell and party. A considerable amount of prospecting has been done, but until the early part of 1899 without payable results. About that time a 110 foot shaft was sunk without finding anything; but after diving a short distance a lode formation was struck, which proved to be from 4 to 18 feet wide and carried gold all through. They dove 90 feet and could see no alteration in the stone. Since then they have stoped the mine to within 80 feet of the surface. At the latter level the lode is 30 feet wide and the quality is much improved, free gold being plentiful. This mine is a very easy one to work, the country being anything but hard, and there is no water to contend against. About 23 men are employed—13 at mine, 2 woodcarters, and 8 at battery. Up to date about 1,200 oz of gold has been won, which returns a handsome profit on all outlay.

#### *Gundagai Division.*

During the past year there has been a marked increase in this Division not only in the number of applications, but also in the amount of gold won.

In the year 1898, the result was as follows, gold, 8,628 oz 5 dwt. 11 grs., value, £32,690 12s 0d; and for the year just ended, gold, 15,484 oz 2 dwt. 13 grs., value £57,776 1s 0d. The value of machinery used in gold mining during 1898 was £10,165 as against in 1899 £27,210 16s 1d.

During the year the following applications have been lodged, viz, 15 gold leases, area, 79 acres; 7 dredging leases, area, 480 acres; 17 M P L applications, under the Mining on Private Lands Act, area 313 acres; 1 mineral lease, area 10 acres (for chrome), and 110 applications for authority to enter, 42 of which were granted—area covered by same being 601 acres. By the foregoing it will be seen that the mining industry in this District has progressed to such an extent as to eclipse any previous year, and there is every indication of the field proving a permanent one.

The results from the Prince of Wales Mine at Reno, viz, 31,188 tons for 9,351 oz, value £34,769 11s 5d, and that from the Sybil Mine, (which is practically a continuation of the Prince of Wales Mine at Reno), viz, 4,570 tons for 3,554 oz, value £13,467 9s 4d, clearly show that the treatment is not an expensive one, for in the case of the Prince of Wales Mine, something like 6 dwt per ton pays, which fact is borne out by a letter from the general manager, who states "It may be of interest to you for the purpose of your Annual Report to learn that the venture so far as profits for the shareholders are concerned has been entirely successful during the past year." The same must consequently apply to the Sybil Mine, more especially as the yield is much higher.

These two mines have virtually proved the Kimo Ranges, or that portion of them lying about 5 miles to the north-west of the town of Gundagai. These mines have now a good supply of water, and the batteries are kept constantly at work. It is a pity that the village of Reno has not been properly and finally surveyed and laid out, so that permanent settlement may take place.

The Booth's United Gold Mines No Liability Company raised about 500 tons of stone, but unfortunately owing to the want of water have not treated any of the stone; the return from this mine is, consequently, nil. According to the return furnished by the manager of the mine, a considerable amount of work appears to have been done, viz, main shaft, 270 feet, with a south drive of 160 feet, depth of deepest level, 250 feet. Several suspensions have been granted this mine to allow the obtaining of pumping machinery and pipes for the purpose of procuring a water supply. This machinery has now arrived, and will be erected immediately. The value of the plant upon the ground is £4000, and a considerable sum besides has been spent upon the property. It is expected that when this water scheme is complete this mine will be a going and a paying concern.

A good deal of what may be termed fossicking has been done in the district, as shown by the quantity of gold bought by the banks and stores. This gold is simply bought from miners prospecting about the district, and from whom no returns are obtainable.

As already stated, there were 110 applications for authority to enter, under the M P L Act, and the number granted—42—may appear small without an explanation. The landowners in this District, with but few exceptions, do not interfere with prospectors, consequently when a prospector finds what he considers a good show, he immediately lodges an application for an authority to enter, and starts to test his ground; if it proves auriferous he gets his authority, if not, he abandons the area, so that it will be seen that during the past year prospecting has been carried on to a considerable extent.

The only alluvial lead now worked in this district is that at Jackalass, where 15 miners are engaged and simply earn wages.

During the year there has been nothing to report either in connection with new reefs or phenomenal results, but prospecting is still being carried on, and it is considered fairly certain that in the near future properties equal if not superior to the Prince of Wales Mine will be discovered.

In conclusion, the year's work has been most satisfactory, both as regards minerals won and country prospected, and when the dredging leases are granted, it is expected that a further impetus will be given to the mining industry in this Division.

#### *Temora Division.*

Mining has not been as brisk in this Division as it should have been. This is owing to want of capital. It is probable that there will be a revival next year.

Several authorities to enter under the Mining Laws Amendment Act were issued.

425 men were employed, 40 upon alluvium and 385 upon quartz. The value of the machinery in this Division was £3,350.

The quantity of gold won was —2,794 oz 5 dwt 5 gr, valued at £8,396 11s. 8d; 1,664 oz 3 dwt. 2 gr, valued at £4,254 9s. 9d, was obtained from quartz, but 1,242 oz out of this was the result of the treatment of tailings by the cyanide process. When some of the leases that have been hung up are forfeited, and the ground retaken, with the aid of capital, the industry will, no doubt, greatly improve, and future prospects are considered hopeful.

#### *Barmedman Division.*

In consequence of the Cyanide and Milling Company having exhausted the large stack of tailings on which they had been working, the returns from this Division are small compared with the previous year. Finding it difficult to obtain more tailings and slimes, it is the intention of this company to try reeling and several leases have been taken up by them. Their machinery is capable of keeping the water well under control, so it may be expected that the ground will be tested to an appreciable depth.

It is satisfactory to know that the Fiery Cross Mine, having surmounted the difficulty of drainage, is now in a fair way of speedy development. This property yielded large returns in the past, but in consequence of mismanagement and flooding it was practically abandoned for a number of years. Diving has been again started at about the 130 foot level, and a reef cut which shows good prospects.

The

The Company is now engaged in erecting a 10-head stamper battery to treat the stone from this mine. Conway and Sons are developing the Phoenix Reef, situated 2½ miles south-east of Barmedman, with very satisfactory results. In June last a trial crushing of 2 tons of stone yielded 7 oz. of gold, and in December another 50 tons of unpicked stone gave a return of 79 oz. A number of miners are employed, and the plant is up to date, and will shortly be added to by the erection of a 5-head battery.

The whole of what is locally known as "The Hill" is under lease or mining transfer, and some very good returns have been obtained. The Ada claim, which is now being converted into a lease, continues to give very handsome returns. A crushing of 35 tons from this mine yielded 105 oz. of gold; and other smaller claims in this vicinity have also been obtaining payable results.

Eleven applications for gold leases within this Division were lodged during the year, aggregating an area of 57 acres, and it is believed that satisfactory developments will follow.

Capital is badly wanted to work known payable reefs in and around Barmedman, and if this were found profitable results would ensue.

#### *Reefton Division.*

In this division 340 oz. of gold were won, and there are 13 miners at work.

The mining industry in this locality is at a very low ebb, as, owing to the influx of water, the individual miner is unable to work the reefs at any depth.

The population is very scanty and prospects dull.

#### *Wyalong and Wyalong West Divisions.*

For all practical purposes these two divisions must be treated as one, seeing that the boundary between the two divides some of the richest claims and separates the machinery on the field.

The advance of the field will be readily seen from the following table:—

Year.	Tons treated.	Oz.	Value.
			£
1894	6,358	9,649	35,946
1895	15,634	24,497	91,864
1896	18,279	33,495	130,000
1897	30,750*	34,370	137,490
1898	30,940	34,582	138,328
1899	....	44,675	178,700

\* Including 4,000 tons of "mullock."

The increase in production would have been greater but for a disastrous drought which stopped many batteries and other gold-producing machinery for an average of two months.

Some of the ore obtained on this field is exceptionally rich—182 tons sent to Illawarra gave a yield of 1,684 oz.; another 20 tons, forwarded to Cockle Creek, gave a return of 103 oz.

The average value of gold has been £4 an oz.

Hitherto the refractory ore and mineral had only been worked at a depth of 360 feet, but this year The Bantam shaft has been sunk to a depth of 630 feet on the Mallee Bull line, where the reef disclosed produced from bulk crushings, "firsts," about 24 oz. per ton, and "seconds," 5 oz. per ton. This development has proved the permanence of this field to that level, and the country being perfectly sound it is impossible to estimate the depth of the vein.

This discovery has given encouragement to all the leaseholders, and they are sinking their shafts with increased confidence and brighter prospects.

The average number of miners employed would be about 1,500, but there are many prospecting parties who are not necessarily included in this return.

Just at the close of the year Neeld and Sons erected a 20-head stamper battery, with all the latest improvements, and this is now running day and night on a parcel of 7,000 tons of stone which is at grass.

This battery will treat 300 tons per week, and will be wholly engaged on the owners' mine.

The batteries on the field are:—Neeld's, 20-head; Nicolas and Raymond's, 32-head; Turland's, 25-head; West's, 10-head; and also Channon's Huntingdon Mill.

The chlorination and dry crushing plants are as follows:—Walter Sully's and Neeld and Sons'. There are also three Cyanide Works, Duncan Noyes Co., Walter Sully's, and J. Channon's. The total value of the machinery on the field is £52,000.

The population is almost stationary, and numbers about 4,200.

A Hong Kong Syndicate purchased (conditionally) the Welcome Stranger, JJJJ, Barrier, and the White Reef leases. After working these for six months the Company were unable to purchase the two latter, but secured the two former leases.

A strong Syndicate from Charters Towers has taken up an extensive lease, and intend sinking a main shaft about 2,000 feet, which will prove the absolute permanence of the field.

At Wyalong West the residents are obtaining, through the Department of Mines, on the recommendation of the Warden, certificates of title of their residence areas.

Great dissatisfaction, in the past, arose through the miners taking up their residences on land reserved from occupation under miners' rights and business licenses. Happily all such disputes are now at an end, and those who are not in legal possession are allowed tenant rights on their improvements.

It is conceded that Wyalong, as a gold-field was never more prosperous or happy than at present. All the genuine miners are fully employed, at a ruling wage of £2 10s. per week, and every lease is at work; suspension of labour conditions not being granted except in most urgent cases. There is only one lease under suspension at the present time.

A plentiful supply of water has been secured in all the tanks, and there is no probability of work being stopped for want of water in the future. During the drought the Department purchased two large tanks from Mr. Deeble, at a cost of £650, which have been reserved for the private use of miners when required.

The depth of the shafts on most of the prominent mines on the field is as follows:—Neeld's, 300 ft.; Bantam, 630 ft.; Mallee Bull, 300 ft.; True Blue, 360 ft.; The Junction, 460 ft.; The Lucknow, 440 ft.; Perseverance, 340 ft.; New South Wales, 510 ft.; Klondyke, 360 ft.; Prince of Wales, 400 ft.; and Christmas Gift, 280 ft.

During the year 39 leases, aggregating in area 160 acres 1 rood 20 perches, were applied for in this Division.

#### *Hiawatha.*

This field, which is situated 9 miles north of Wyalong, is on private lands. A large number of "Authorities to Enter" were issued, the most successful prospectors being Crowley and party, Crampton and party, and Molloy and party. During the year 50 tons were treated, yielding 80 oz. of gold; work is being prosecuted, and the results still continue satisfactory.

#### *Yalgogrin Division.*

In this Division mining has been desultory, in consequence of the anxiety of the mining population to get into Waldron's paddocks.

The Department, acting upon the advice of expert officers, it is understood, has decided to resume this ground—containing 2,560 acres—which is nearly all auriferous.

There are some 150 European miners engaged in and about this district; and the yield of gold, as ascertained, was 1,060 oz., from 446 tons of stone.

Capital is very badly required for the development of this field, and this no doubt will be found when the railway reaches Wyalong, and the paddocks referred to are resumed.

There

WINDING ENGINE HOUSE AND MAIN SHAFT, "NEELD'S" PROSPECTING MINE, WYALONG, N.S.W.

THE "TRUE BLUE" GOLD MINE, WYALONG, N.S.W.  
(General Surface View.)

There are twelve distinct lines of reef being worked and proved to contain gold. The several shafts varying from 35 feet to 190 feet, and the reef varying from a thread in thickness to 3 feet bearing east and west, and underlying to the south.

During the year no alluvial gold had been sought for; but towards its close, a party intended shortly so to do, upon a site near the township.

There is one 10-head stamper battery on the field, and two cyanide plants, with a plentiful supply of water; and, as the majority of stone raised was procured during the latter half of the year, these should still be kept busy for some time.

#### *Young Division.*

Mining operations in this Division during the past year have been extremely limited; which fact may be attributed to the severe drought the district has experienced during the past five years—the consequent scarcity of water causing an almost entire suspension of sluicing operations.

Great results, however, are looked for from the working of the Burrangong Gold Dredging and Sluicing Company, (Limited); for whose operations a large number of mining tenements have been secured along the creek frontages. The Company is expected to be in full work very shortly, contracts having already been let for the construction of necessary machinery, &c.

#### *Narrandera Division.*

Mining development in this Division has been practically in abeyance during the year, in consequence mainly of the widespread and continuous drought. Back from the river and creek frontages prospecting has been checked by the want of water, and even where provision for its conservation has been made, by the excavation of tanks or the erection of dams, operations on working mines have had to be suspended for lack of a sufficient supply for domestic purposes. The advent of a wet season would stimulate exploration and probably lead to the discovery of payable mineral deposits in places where at present the thirsty soil absorbs every particle of the all too scanty rainfall. Attention might again be invited to the probability of payable gold being found in the deep ground extending northerly from Urana for about 34 miles to the Galore. If a systematic search was made across the lead, a mile or so above the town of Urana, the enterprise might be rewarded. When recently sinking a water shaft on this ground, near the town, the workmen passed through rounded pebbles of ironstone and quartz, bands of coloured and white clay, and finally struck water in a thick deposit of coarse grey sand and pebbles at 150 feet from the surface. The bed-rock was not reached, but the nature of the last deposit and the rapid influx of water would seem to indicate that the rock was close at hand. Several years ago a party of miners were attracted by the appearance of a layer of gravel left exposed in the bed of Urana Creek by a passing flood, and prospecting upwards from point to point they struck gold in remunerative quantities at several places flanking the deeper ground, which they had not the inclination or perhaps the means to explore.

At Cowabbie, in the parish of Brangalga, the promise of the lode opened up by Evans and party has not been fulfilled. With the plant employed the extremely fine gold of the reef could not be saved, and the party ceased work during the year. It is nevertheless thought that the numerous auriferous veins in this locality could be profitably worked under skilled management and with up-to-date gold-saving appliances.

On Pike's line of reef in the same neighbourhood, some desultory work has been done during the year, but the field at present is apparently deserted. The gold in the reefs at Grong Grong is of a coarser character, and more attention has been given to these; but, with the exception of the "Harry Smith" mine, the work done on them has been wholly of a prospecting nature and a number of the claims are now practically abandoned. The "Harry Smith" appears to be a likely property, but the work is hampered by the want of sufficient capital; and, as their return for the year shows—148 oz., valued at £518, from 514 tons of stone—the amount of gold won did not cover working expenses.

#### *Junee Division.*

Owing to so many gold leases having been cancelled for non-fulfilment of labour conditions very little work has been done in this Division during the year. There are now only three companies at work, viz., Howell's Consolidated Gold-mining Company (Limited), Baker's, and Charlton's. In Howell's Company there are three mines, viz., the "Dust Hole," and "Just in Time," which are worked conjointly, and the "Doctor's Reef." From the "Dust Hole" 1,500 tons have been treated during the year at the Illawarra Smelting Works for a return of 600 oz., valued at £2,400. It is stated that this mine has been worked at a loss. In November it was granted "Suspension of labour," and it was doubtful whether operations would be resumed on the expiration of the term allowed. The closing down of this mine would have a very discouraging effect on the prospects of the Junee field, as it is the only instance in the district where an adequate supply of capital has been placed at command of the mining manager. At the "Doctor's" 500 tons have been raised, and at the "Just in Time" 200 tons; but no ore has been treated from either of these two mines.

Baker and party, on account of there being no suitable crushing plant in the locality, were compelled to send their stone to Illawarra and, latterly, to Cockle Creek for treatment; and the charges for freight, crushing, &c., proved so heavy that the earnings of each of the party (four men) amounted, for the year, to under £1 per week.

At Charlton's Mine very little work has been done during the year, the stone treated having been at grass for months past waiting for sufficient rain to enable him to get it crushed at Mr. Crawley's mill. Mr. Crawley has now no mine, his gold lease having been cancelled about twelve months ago.

At Eurongilly and Wantabadgery, 17 alluvial miners were at work during the year, and are reported to have won 63 oz. of gold. Of this total, 44 oz. were obtained by Steele and party, who were prospecting a supposed deep lead on the Wantabadgery freehold, under an "authority to enter." After some months' trial the ground was proved to be unprofitable, and it has now been abandoned.

The lease of the Pioneer Mine at Eurongilly, which had been cancelled, was again taken up at the latter end of the year, but no work has been done on it as yet. There is a cyanide plant at Eurongilly, and 800 tons of tailings have been treated, but with what results is unknown. It was only at the latter end of the year that these tailings were got through, owing to the great scarcity of water, which is the great drawback to mining in this district.

There are a few fossickers about, but these state that they barely make "tucker."

### **TUMUT AND ADELONG MINING DISTRICT.**

#### *Albury Division.*

During the past year over 800 acres of the Bungownah Park Estate, a few miles down the river Murray from Albury, have been applied for by the owner, Mr. John Grieve, as special leases, under the Mining on Private Property Act, for the purpose of working, by means of a pump dredge, a large deposit of gravel known to exist there. Elementary sluicing operations have proved that gold in small quantities is to be found throughout the gravel area, but that its successful recovery could only be accomplished by some such extensive method as that of dredging.

So far, none of this class of mining has yet been commenced.

At the Black Range, some half-dozen parties have been and still are carrying on prospecting operations with small and varying degrees of success, as also are several parties at Rotherfield, some 20 miles up the river from Albury.

With the exception of a few week's interval, Government boring operations have also been conducted at the Black Range, since the 1st May last, with the view of ascertaining the existence of a deep lead. Up to the end of the year 14 bores had been put down, ranging in depth from 56 feet to 315 feet; and in three instances colours of gold were found in the bore. The ground is deep and difficult to work in.

#### *Corowa Division.*

The only mining carried on in this Division is that at the Corowa Deep Lead Gold-Mining Company's Leases, near Corowa, with assistance from the Prospecting Vote.

During the past year No. 1 shaft has been sunk from 60 feet to 386 feet, and a drive extended 34 feet. No. 2 shaft has been sunk from 118 feet to 147 feet, and a drive extended towards No. 1 shaft for drainage purposes.

*Walbundrie*

*Walbundrie Division.*

Work on the Bulgandra Gold-field has been steadily declining, and at the close of the year only one private gold lease was being worked, 6 men being employed with indifferent results.

*Germanton Division.*

With the exception of some desultory prospecting for tin on private property, no mining has been carried on in this Division.

*Adelong Division.*

The bulk of the alluvial won in this Division was from sources below Gibraltar, the balance coming from all upper parts, chiefly as the result of fossicking.

The Jennings Gold-mining and Dredging Company, at Grahamstown, had twenty men employed. Towards the end of the year they completed their plant, which is now in position, and they are sanguine of success. It is hoped that their returns will largely augment the output of alluvial gold from this Division during the coming year.

The Gibraltar Consolidated Company, Limited, whose mine is the principal one in this Division, has done good work, and during the year has treated 23,700 tons of stone for a return of 11,362 oz. of gold, valued at £40,800. There is every probability of an improvement taking place in this property at a depth, and of the lode becoming more regular and defined, and not as now—a continuous series of breaks. The exceptional formation met with in this mine, attributed to the peculiar rending of the rocks in past ages, requires special geological investigation. There are three main shafts, viz., Radcliff's shaft, 400 feet above the creek; O'Brien's shaft, 250 feet above the creek; and Perkins' shaft, 150 feet above the creek. The former is being sunk, and at the end of November had reached a depth of 600 feet from the surface. The drives from this shaft are the 40, 160, 230, 355, 455, and 555 foot levels; and the total lengths amount to over one mile. The 230 and 455 foot levels communicating with O'Brien's shaft, there is good ventilation throughout the mine. O'Brien's shaft is being sunk, and at the time above stated a depth of 360 feet had been reached. A fair amount of development work is being prosecuted in the 200, 300, and 350 foot levels of this shaft.

There are several reefs in the property—the Main or Central Reef, Calico Reef, Chinaman's Reef, &c.—their general bearing being from 40° to 60° N.E. and S.W., and underlying slightly to the east. They are composed chiefly of quartz containing a small percentage of iron pyrites. The country rock is a very hard granite; but a series of diorite bars and buck-reefs run through the country at right angles to the reefs, causing a great disturbance, and consequent difficulty in systematically opening up the mine, owing to the faulting of the reefs—sometimes to the extent of over 100 feet. These heaves, however, are almost invariably to the right hand.

The reefs vary in width from 1 to 3 feet, and the milling ore assays from 13 to 15 dwt. of gold per ton. Ore chutes are blocked out by winzes from level to level, and the stone is extracted by back or over-hand stopes. Strong stulls are put in, in the back of the levels, and mullocking is carried on as the ground is being taken out. About 240 men are employed underground at present, and there are 20 machine rock-drills constantly at work.

The plant and machinery on the property is valued at £40,000. There are steam hoisting-engines at each shaft, and double cages to carry trucks of 6 cwt. capacity. The battery comprises two Dodge Giant rock-breakers, eight Challenge ore-feeders, forty heads of stamps (weight, 850 lb., ninety drops of  $7\frac{1}{2}$ " per minute), fourteen frue vanners, and all necessary steam-driving gear. There are also compressor plants, a number of rock-drills, and very complete chlorination and cyanide works capable of treating, respectively, 10 tons per week and 2,000 tons per month. The Department is indebted to the courtesy of Mr. John Nute, Managing Superintendent of the Company, for the illustrations given of this mine; as, also, for some of the above particulars.

The Challenger Gold-mining Company has also been doing good work. Their shaft is now 450 feet in depth, at which level, northerly, the reef is improving in size and quality, and, generally, the mine looks promising. This Company is a local one, and, to thoroughly develop their property, increased capital will probably be required.

The Prowse and Woodward Mine, situated on the Old Hill line, is distant about 250 feet southerly from the crown of the old reef, of which it is a continuation; its prospects, therefore, depend a great deal on the future progress of the Challenger Co.'s mine.

The Caledonian Gold-mining Company, at a depth of 350 feet in a drive south, discovered sulphide ore, which was treated at Dapto works, yielding from 9 to 14 oz. per ton, the gold being of first-class quality. The present depth of the shaft is 400 feet, and the value of the gold won for the year was £3,091. This Company refunded the Prospecting Aid which, when in their prospecting stage, had previously been granted to them. The Company—also a local one—is now a dividend-paying venture, and its property promises to prove really good when further developed.

The Adelong Proprietary G.M. Co.'s Mine is at present in the hands of a party of tributors. During the year 233 tons of ore raised from this property have been crushed for a yield of 233 oz., valued at £990.

The "Great Victoria," "Kurrajong," and "Lady Mary" are also being worked under tribute contracts; but so far with small return to the tributors.

The Fletcher's Reef Co. received aid during the year from the Prospecting Vote, to enable them to drive 100 feet south at their deepest level—215 feet. Nothing having resulted in that direction, it is now intended to clean out the shaft to its alleged former depth of 300 feet; and the shaft having carried down on the original bunch, it is conjectured that at a greater depth the ore body will make again.

The Gibraltar South Co., whose mine adjoins the Slate Bar G.M. Co.'s leases, has been doing some prospecting work without any return for its outlay; but the prospects of late have been so far satisfactory as to enable the whole of these properties to be worked.

During the year Mr. Ritchie's battery crushed 2,460 tons of ore for a yield of 2,867½ oz. Some of the stone treated came from outlying parts, chiefly Gundagai.

Prospecting aid was granted to Marshall, Wicht, and Co., to cut a water-race, for alluvial-mining purposes, about 15 miles long. By means of this race, since its completion, this party have worked a lot of old ground in Nuggety Gully with fair results. The ground sluicing at about three-quarters of a grain per cubic yard so far pays full wages.

A large area of Crown and Private Lands within this Division has been taken up for dredging purposes; and when the Companies or applicants commence operations, a large number of men will be employed, and excellent results are anticipated.

A large number of Authorities to enter under the Mining Laws Amendment Act were granted during the year.

*Tumut Division.*

It is to be regretted that the return of gold won in this Division during the year cannot be obtained, as the miners sell their gold to the different local storekeepers, hawkers, &c.; while some also is sold in Gundagai. The mining outlook for the coming year looks very promising, and it only needs capital to develop the great mineral resources of this district. Many applications have been lodged for dredging areas, and when the leases are granted and work is commenced, a great impetus will be given to mining in this Division, and a large number of men will be employed.

The great drawback to quartz-mining is that there are no batteries working in this part of the District, and it costs too much to cart the stone to Adelong.

If convenient ore-treating machinery was available, a large number of the quartz reefs now unworked, or merely prospected, would be developed. It is stated, however, that there is a prospect of two batteries being erected before long.

The mining revenue received in this Division during the year has been the largest recorded within the last fifteen years.

There were 257 miners' rights issued, and 55 applications received for authority to enter, which in 25 cases was granted.

The area of gold leases applied for aggregated 1,241 acres, and the deposits and survey fees on same amounted to £1,340 8s.

A large number of applications for permission to mine on Reserves within the Division were also received by the Department during the last three months of the year.

*Bulloo Division.*

Here, as elsewhere, the continued dry weather greatly retarded the alluvial workings; in fact, nearly all ground mining was at a standstill.

Several good claims were opened up at Laurel Hill by driving under the basalt, but the absence of water keeps miners from washing their dirt.

A large quantity of stone was crushed at Walsh's Dyke, but so far with unsatisfactory results the average yield being only about 1½ dwt. per ton. It is now being opened up upon a large scale, as it is thought by using water-power that even this yield may be made to pay.

The White Dog Reef had a trial crushing made at Adelong. A yield of about 10 dwt. per ton was obtained, but owing to the heavy cost of carting this was not found to be payable.

During the year 196 miners' rights were issued, but over 200 miners found employment in the Division, the bulk of whom were on alluvial ground.

*Tumbarumba Division.*

The dry year experienced has again considerably retarded alluvial mining.

The amount of work done for the year just ended was about the same as that done during the preceding year, the decreased number of miners in the Division arising from the lack of sufficient water having prevented many who do not rely upon mining exclusively for a livelihood from mining with any profit.

The only new alluvial claim worked, of any extent, was one in the bed of Tumbarumba Creek. This claim, which is working with the pumping machinery previously in use on the ground held by the Tumbarumba Flat Gold-sluicing Co., is at present undoubtedly a paying one, and gives every promise of continuing so. The ground previously held by the Tumbarumba Flat Gold-sluicing Co. has again unsuccessfully been tried with pumping machinery.

There were no rich finds of alluvial gold in the Division. Payable gold has been obtained under the basalt at Cherry Hill, but nothing of exceptionally noteworthy character has to be recorded. Nor has any really forward movement been made in quartz-mining, no new discoveries of importance having been made on either Crown or private lands.

The quantity of gold won during the year was 1,950 oz., as against 1,800 oz. won in 1898.

*Wagga Division.*

At Pullitop, 30 miles southerly from Wagga, about 150 tons of stone lies stacked at Bracknere's Battery awaiting treatment, but the creek has been dry for three years past, and operations in consequence have been in abeyance pending the advent of a rainfall sufficient in volume to once more fill the watercourses.

In this locality several reefs have been opened and proved to be auriferous, but after slight prospecting they have all been abandoned.

On the Wagga Common, within 4 miles of the town, several auriferous reefs have been discovered, and at different times mined upon, but the returns have not in any instance been sufficiently encouraging to warrant the continuance of operations. Lately Nash and party, working with aid from the Prospecting Vote, have put down a shaft 60 feet on one of these veins, varying in width from 18 inches to 3 feet. The lode, so far, is a very promising one, and yields a battery return of half an ounce to the ton.

*Cooma, Kiandra, and Tooma Divisions.*

No fresh developments have taken place in any of the mining centres within the above Divisions, but prospecting work is now being carried on at Bushy Hill, the Nine-mile, and Fiery Creek, and it is hoped that during the coming year permanent fields will be established at all three places. The prospects at the Nine-mile are very encouraging, and should they continue it will give a great impetus to prospectors to test the deep leads under the basalt in and around Kiandra.

A large amount of land has been pegged out and applied for on the Snowy, Eucumbene, Bredbo, Umaralla, and Tumut Rivers as dredging areas. Marks and party have now nearly completed, at a cost of about £7,000, a dredge at Kiandra for the purpose of working the bed and banks of the Eucumbene River, and they expect to have the dredge in full working order by the middle of February next. If satisfactory results are obtained (and the promoters are very sanguine), no doubt within a very short time a number of other areas will be worked. It is reported that good prospects have been obtained from the beds of all the rivers mentioned, more particularly from the Snowy River at and about Buckley's Crossing.

Cooma.—There has been very little alluvial mining in this Division. About twenty men have found employment fossicking, chiefly on the banks of the Umaralla River. On quartz reefs about 150 men have found employment, but as to results it has, in general, been difficult to obtain reliable information.

At Bushy Hill, until leases are amalgamated and capital is furnished, the results will be unsatisfactory. As depth is reached water becomes a formidable obstacle. The ore raised on this field is also highly mineralised, and requires more than ordinary battery treatment. A fair amount of work has been done on three of the leases, viz., Perkins and party, Willmott and party, and Blake and party. From the two last mentioned ore has been raised averaging from 2 to 3 oz. to the ton. Some very rich specimens were obtained in Willmott and party's ground at the 130-ft. level, the gold obtained from 19 cwt. of picked ore having amounted in value to about £1,800. The shaft is now down 220 feet, and still carries good gold. Several other leases are also being worked, but so far without success. About 400 tons of stone have been treated at the Illawarra Smelting Works, Dapto, for a yield of about 1,000 oz. of gold. This does not include the 19 cwt. of picked specimens above mentioned.

At Cowra Creek about 50 men are employed, and all appear to be making fair wages; yet no attempt has been made to test the reefs at the deeper levels—no shaft being worked at a greater depth than about 80 feet. There are five batteries on this field.

Kiandra.—There are no new developments to record in connection with this field. About the same number of miners found employment as during the previous year. At Nine-mile some twenty men are working on the "Empress" Mine, which is an alluvial property worked by tunnel.

Tooma.—Good work is being done at the Grey Mare's Reef, Bogong, where twenty men are employed. The mine, which is the property of the Bogong Gold-mining Syndicate, is now well developed, and is being worked in a very satisfactory manner. About 150 tons of ore are at present dealt with each week, by two Huntingdon mills and a Giant rock-breaker driven by pelton-wheel.

*Captain's Flat Division.*

The operations of the Lake George Mines, Limited, constitute the principal mining done in this Division, and its chief product has been copper. But gold, in small quantity, and other metals are associated with the ore in this Company's property, and, as large bodies were raised and treated, a considerable amount of the precious metal was won by them during the year. At the end of September the Company decided to discontinue smelting operations and erect a large cyanide plant for the treatment of the auriferous gossan ore in the Northern and Southern Sections of its property, an experimental plant having shown very satisfactory results. At the end of the year the new plant was almost completed, and a portion of it is now in use.

Alluvial mining has been confined to occasional fossickers in the bed of the Molonglo River, and any other work done outside the Lake George Mines has been merely prospecting.

*Bywong Division.*

Mining in this Division is almost at a standstill. Two of the claims at Bywong are being assisted from the Prospecting Vote, but the general prospects of the field are not at present very hopeful.

*Gundaroo Division.*

With the exception of about eight or nine fossickers, there are at present no miners working in this Division; but during the year some 83 oz. of alluvial and 45 oz. of quartz gold were won. The Lone Bird, at Brooks' Creek, held by Hector Gordon and party under authority to enter, treated 33 tons of stone for a yield of 41 oz. of gold, and from Cunningham's Reef, Dairy Creek, held under authority to enter by William Webster, 8 tons of stone was crushed, resulting in a yield of 4 oz. of gold. Both these claims have been idle for some months.

During the year two quartz claims at Dairy Creek and one at Brooks' Creek have been taken up, conditionally registered and, after a little prospecting, abandoned. Under the Mining on Private Lands Act, authority to enter was granted to five miners in this Division during the year. Of these, three did a little prospecting only; the others did not disturb the surface. No new finds have been reported.

*Yass Division.*

Mining matters in this Division have not been very flourishing during the past twelve months, and, with the exception of a few payable claims at work, the industry generally was at a standstill.

No new discovery of any importance has resulted from the numerous prospecting parties who have been testing the various gold and mineral fields. Gold, silver, lead, and copper can be found widely distributed over this district, and though hitherto the payable mines have been few in number, there are many square miles of country of a metalliferous character that have never yet been visited by the prospector.

Almost all the gold-mining done has been on the Nanima field, where there is a 5-stamper battery (800 lb. stamps) of the latest design. This battery was largely availed of, both by claim-holders and others engaged in prospecting under the Mining on Private Land Acts. The two principal claims are the Prospectors (Jordan's) and the Record Reign (Butts and party); and from the "Old Nanima," besides a little gold, some bismuth ore, valued at £90, was also obtained.

In this part of the district some fossicking is also being done, on portion 13, Parish of Bedullick; but only one claim (Summers') is on payable ground, and in this, it is believed, good wages are being made.

At Gooda Creek, a prospecting syndicate have had four men employed. From the deepest level, about 60 feet, 12 tons of ore, raised and treated, yielded 36 oz. of gold and 8 cwt. of copper—gross value, £170 10s.

*Queanbeyan Division.*

The mining done in this Division during the year was mostly in the direction of prospecting and pioneer work. Little or no information as to results are available by the Department. That portion of this district in which, during past years, the principal gold-mining operations were conducted, has since been transferred to the Yass Division.

## SOUTHERN MINING DISTRICT.

*Braidwood and Araluen Divisions.*

The distinguishing feature in mining during the past year in these Divisions has been the great number of applications for authority to enter private lands.

During the year 574 applications were lodged, and 197 authorities to enter were issued. Of the applications lodged, 29 lapsed, 140 were withdrawn, 160 were refused, 3 were lodged in the wrong district, and 47 are waiting action.

About half of those not yet dealt with refer to land in Araluen, where the boundaries of certain private land fronting the Araluen Creek are not clearly defined. Steps are being taken to settle the boundaries, after which the applications can be proceeded with.

All the available ground (both Crown land and private) has been applied for under lease for gold-dredging purposes, and from early in the year, and throughout the year, these applications were being received. Many of them being for narrow strips along streams, required extra time and labour both to mark out and to prepare the necessary sketches, &c.

A considerable quantity of ground for dredging purposes has also been acquired by purchasing the rights of old claim-holders, so that for the greater part of the year very little work has been done under former conditions. Some of the miners have become temporarily absorbed in the dredge-building under way, some fossicking, and others road repairing and constructing.

The dredging industry got fairly started in the district towards the close of the year; and three dredges are now at work, viz., two at Lower Araluen, and one, the "Federal," at Jembaicumbene. The latter is a pump-dredge, but the others are worked with buckets. The results of operations, thus far, have not been ascertainable, but it is believed that the proprietors of the Araluen dredges are so well satisfied that two more are to be constructed. With regard to the "Federal," it is understood that no "clean-up" has yet taken place. According to information there are seven other dredges in course of construction, at the following places, viz.:—Araluen (2), Jerricknorra, Shoalhaven Terraces, Shoal haven River, Colombo, and Little River. Contracts are also stated to have been let for the building of dredges at Larbert (for the Braidwood Sluicing Company), and at Lower Jembaicumbene.

The greater part of the ground held for dredging purposes is eminently suited for that object, if the water supply proves sufficient, of which, however, there is as yet no question. Judging, therefore, by the large quantities of gold obtained in the district in the past by the old methods, the success of most of the dredging ventures appears to be assured; and a large increase in the quantity of gold won during 1900 may confidently be anticipated.

During the year 4,459 oz. 3 dwt. 15 grs. of gold were forwarded by escort, and, so far as can be ascertained, 595 oz. 18 dwt. 8 grs. were sent privately to Sydney from Braidwood.

In quartz-mining very little was done in either of these Divisions. At the Mulloon Gold-mine, Tarago, some twelve men were employed, but the work effected appears merely to have been in the nature of prospecting. The vein varies from 18 to 30 inches in width, and carries quartz, galena, and pyrites.

From the Seymour Estate (Araluen) some 7 tons of stone was sent away for treatment, and yielded 21 oz. 3 dwt. 12 grs., valued at £79.

*Major's Creek Division.*

It is to be regretted that the mining industry in this Division has, during the year, made no progress.

The quantity of gold won in 1898 was 1,859 oz., but during the year ended it amounted to 1,549 oz. only; showing a falling off of about 310 oz. As accounting for this decrease, it may be observed that no new discoveries have been made in either alluvial or quartz. Moreover, the season has not been favourable for ground-sluicing purposes, as the few freshes which came into the races were of such short duration that very little of the old worked ground was got rid of; and for some time past the Long Flat and Back Creek have been short of water for puddling the washdirt.

As regards the Snowball portion of the Division, it is nearly deserted, there being but about from twelve to fifteen miners there, whose average earnings only amounting to between 10s. and 15s. per week, it cannot be wondered at that so few have remained. No quartz-mining has been done there for some time past.

The following results were obtained during the year from stone raised within the Division:—A parcel of 21 tons of mundic stone, taken from the 90-foot level in a lode 9 feet in width, yielded 7 oz. of gold, worth £3 17s. per oz. Another party, working at a depth of 80 feet, in a vein averaging from 3 to 12 inches, raised 108 tons of ore, which yielded on treatment about 1 oz. to the ton.

At Big Hill, Major's Creek, the Eureka Gold-mining Company (No Liability) employs ten men in and about the mine, which is 300 feet deep; deepest level, 294 feet. This property contains a fissure vein, the average width of which is about 12 inches, and the dip or underlay is northerly. At the bottom the western level has been driven 47 feet and the eastern level 73 feet, at both of which points the reef pinches out. There are 100 tons of ore now at grass, and 113 tons were crushed at the Major's Creek mills, but from which no returns have been obtained. Ten tons were sent to Dapto for treatment; 11 tons to Wallaroo, South Australia; and 6 tons to Melbourne, from which about 3 oz. per ton were obtained. It is believed these parcels were sent in a raw state, i.e., as the stone came out of the mine.

The value of machinery in this Division is estimated at £20,200, and most of it has been lying idle throughout the year.

*Little*

CYANIDE PLANT "HOMEWARD BOUND" GOLD MINE YALWAL, N.S.W.

*Little River Division.*

Mining in this Division has been confined to a month's work in the water-races, and the usual fossicking work followed out on an old gold-field.

On private land at Half Moon very good returns have been obtained, and the land, at the close of the year, was under offer to a dredging syndicate.

The dredging boom was in full force here, and every available portion of ground on which a dredge or pump can be placed has been applied for. An area of 1,942 acres is comprised in these lease applications.

In only two of the areas applied for, of 100 acres each, has any work been done.

Quartz-mining was a flourishing industry here a few years past, but the inability of the individual miner to contend with the inflow of water, and the indifference of local capitalists caused quartz-mining to decline. A Braidwood syndicate have organised a Company to work the Day Dawn Reef, from which large returns were obtained some years back, and proper machinery is being procured.

It is predicted, locally, that if this mine is sunk to a further depth of from 100 to 150 feet it will be the means of opening up a large quartz-mining country at Little River.

*Nerriga Division.*

The rainfall in this Division has been exceptionally small. The mining done was consequently in proportion, and the miners had to take advantage of employment with the Corang Deep Lead and the Oallen Companies.

Twenty acres of additional ground under quartz leases have been taken up during the year, on which, however, as well as on the leases held by the Phoenix Company, no work of any extent has been done. The syndicate holding the private land, on which is the ground known as the Corang Deep Lead, have erected pumping and winding plant; but very little underground work has been done since they have taken possession.

Alluvial leases aggregating an area of 137 acres, adjoining the private land have been secured, but no move has been made in opening up the ground.

Under special dredging applications, areas aggregating 987 acres have been secured on the Shoalhaven River. The Oallen Supply Company and the Oallen Treasury Company have been making preparations to work their leases, also the Jerricknorra Centrifugal Company, but with these exceptions the other leases are at a stand.

*Nowra and Yalwal Divisions.*

During the early part of the past year mining work was at a standstill at Yalwal, owing to the scarcity of water, the majority of leases being under suspension of labour conditions; and, with the exception of the Homeward Bound Gold-mining Company, very little has been done on this portion of the gold-field during the past twelve months. The output from the batteries of the above-mentioned Company was less by 25 per cent. than it should have been,—owing to their not being continuously employed. The tonnage of ore put through the mill for the year was 15,249 tons, from which was obtained 1,542 oz. of bullion of the value of £5,011 4s. 6d., (say) £3 5s. per oz. By cyanide process 2,182 tons were treated and produced 574·63 oz. of bullion valued at £1,223, (say) £2 2s. 2½d. per oz. The total cost of free milling, of getting, trucking, breaking, stamping, amalgamating, &c., was 6s. 3d. per ton; and the cost of cyaniding with three leaching vats (treating one third (say) of the mill output) including cyanide, caustic soda, labour, assay expenses, &c., amounted to 4s. 3d. per ton. The company expect to lower the cost of cyaniding when their plant for this process is completed. The battery has forty heads of stampers with 770 lb. 8-inch drop, 72 per minute; also ten heads of stampers with 630 lb. 8-inch drop, 75 per minute. The complete cyanide plant, now nearly finished, is arranged on a plan new in Australia; the precipitating boxes, and solution vats, being placed at a high level above the leaching vats, which are 60 feet below them vertically and 220 feet distant horizontally. This arrangement has proved very economical in labour; at present three lads on each shift do all the work, and it is certain that the full plant—which, complete, will cost approximately £1,600—can be worked at an additional expense of not more than 25 per cent. There are thirty-five men employed on this property.

The Yalwal Gold-mining Company have not been able to work their property profitably by the present methods. They have only crushed 600 tons which yielded 100 oz. of gold; and from the cyaniding process, 3,000 tons which were passed through gave 800 oz. of gold; total value, £2,250. This Company employ forty-three men.

The Eclipse cyanide plant passed through 1,000 tons of tailings, yielding 275 oz. of gold, of the value of £646.

Grassy Gully, a portion of the gold-field situated about 7 miles northerly from Yalwal and about 2 miles westerly from the Shoalhaven River, during the past year has been very active; but work has been much retarded owing to there not being a good road to the field. Thirty-one gold leases have been granted, on all of which good prospects are to be found. These leases surround portions 17 and 18 comprising an area of 7 acres, known as "Lovely's Leases." The main shaft of this property, on reef No. 1, has been deepened from about 70 feet to 133 feet—bearing rich gold all the way. The auriferous formation appears to be about 5 feet wide, and the rich vein from 2 to 20 inches thick, going down strong under foot. Shaft No. 2, on reef No. 2, has been sunk to a depth of 40 feet—reef from 1 to 2 feet thick, worth 3 oz. fine gold per ton. All the ore from here has been smelted at Dapto, and from October, 1898, to November, 1899 yielded 167 oz. 11 dwt. 19 grs. fine gold from 179 tons 16 cwt. 2 qrs. 6 lb. of stone. In addition to the fine gold, silver was also present to an amount equal to one third of the gold contents. Preparations are now being made to develop the mine on a large scale, which will be undertaken as soon as the projected road is ready for traffic.

Mining operations by dredging, on the Shoalhaven River and creeks, promises to become a very prominent industry in this district. Thirteen applications for special gold-mining leases have been made, covering an area of 1,180 acres of the river and creeks.

*Ulladulla Division.*

There has been no mining done in this Division during the past year. An application for a mineral lease (coal), and an application for a prospecting protection area have been made; but, beyond this, there is no indication of fresh work being started. There were nine miners' rights issued.

*Nelligen Division.*

Mining in this Division has not been very brisk during the past year; but in quartz-mining there appears to be somewhat of a revival, as within the last four months of the year four gold-mining leases, with an area of 20 acres, have been applied for. With those already in force this makes a total of 10 leases, with an area of 50 acres. Another battery (the second of the Division) is also in course of erection, at Currowan Creek, on a large reef known as the "Black Diamond." This property was worked and abandoned over five years ago by a Milton syndicate; and has been spasmodically worked by several parties since, but without success, through want of a battery on the ground. The present syndicate is partly local, but the ruling spirit and manager is Mr. Merton, of Major's Creek, who is a practical miner, and provides most of the capital. There is every hope that they will get a handsome return for their outlay; and the battery being erected there will be the means of some of the adjacent reefs being worked. In fact, some have already been taken possession of, and comprise some of the leases taken up lately.

During the winter two reefs were found at Black Flat, on the Braidwood Road, about 7 miles from Nelligen, both of which are being developed by aid from the Prospecting Board; but in that of McCarthy and party, although the reef was 1½ feet wide at surface, it is now at about 90 feet only 1½ inches wide, and very poor. Messrs. Thompson and party have a reef, which is much mineralised, and about 1½ feet wide. Two tons from the 20 foot level was sent to Clyde Works, and returned 18 dwt. to the ton, but only 6 dwt. of that was free gold. Both parties are still sinking, the latter being about 50 feet deep.

Although about the same number of men have been employed as last year, the yield of gold from quartz has been only 97 oz., value £388, as against 118½ oz., value £474, last year; and from alluvial 50 oz., value £200, has been won, as against 60 oz., value £240, in 1898.

During the year there were issued fifty-two miners' rights, one business license, and two mineral licenses.

*Bateman's*

*Bateman's Bay Division.*

Very little mining has been carried on in this Division on the gold leases. The Dick Consolidated Gold-mining Company have about wound up. This company had aid granted to them to the amount of £125, but they did not finish all the work under the aid, and the claim is now idle.

Fitzgerald started well on his gold-lease at the commencement of the year, but has now abandoned his claim.

John White and party's claim of 25 acres, known as Ryan's Hill, near Mogo, has been formed into a company of 60,000 £1 shares, and up to date machinery to the value of £1,400 is now being erected with a view of working the claim properly. Several experts from Sydney have visited this claim to report on it; with the result that they speak of the mine as one of the richest in the Colony. They penetrated about 20 feet into the wash and, from the prospects obtained, handsome dividends should be in store for the shareholders.

John T. Day and party have a claim at the head of the Cabbage Tree Creek that they intend working with the aid of machinery. The land adjoining has been proved to be very rich but, owing to having no machinery to compete with the water, they had to abandon the claim. Day and party are perfectly satisfied with their present prospects.

Loxton, at Waterfall Creek, has a tenement of 25 acres. He has been granted suspension to enable him to get and erect machinery to work this claim.

During the year one special lease of 100 acres for dredging purposes was applied for; but, subsequently, the party withdrew his application. There can be no doubt, however, that the ground applied for is well suited for dredging purposes, being one of the tributaries of the Clyde River, with as many as seven gullies running into it, all of which have been proved beyond doubt to be payable. There are other places in this Division also suitable for dredging, and no doubt before long these will be taken up and worked with good results.

Two other tenements of 20 acres each have been secured near Mogo, and more will be taken up shortly.

At Cockwhy Creek there are made hills similar to those at Mogo, which, having the same formation and strata, should be suitable for alluvial. In fact, good prospects have been obtained from one of these hills, but want of capital is the great drawback to development.

No doubt the year 1900 should be a record one for this Division, as far as the alluvial is concerned. The prospects, so far, are certainly most encouraging.

*Moruya Division.*

It is to be regretted that the returns from all places where mining is carried on in this Division continue unsatisfactory, and that in no case have the miners received adequate results for the work and money they have expended.

Although the total area of ground applied for during the year under the various acts and regulations—namely, 301 acres 3 roods—seems fairly large, still by far the greater portion—namely, 182 acres—consists of three dredging lease applications which have not yet been approved of, and consequently no work had yet been commenced by the intending lessees. It is questionable, moreover, whether the generally rapid current and rocky bed of the Moruya River below its junction with Araluen Creek will prove suitable for dredging operations.

From Bimbimbie it is reported that "things there are at present practically dead," although in the vicinity a large amount of work has been done by the Anglo-Australian Exploration Company.

This Company has sunk no fewer than seven shafts varying in depth from 90 to 350 feet, yet the manager has to report: ten men employed; ore raised for the year, 200 tons; quantity of gold won, nil. "But the crushing is not yet completed, and tailings have yet to be cyanided."

Here also about twenty men are making a precarious living by fossicking about the reefs and in the bed of the Creek.

At the Italia mine, at Tarlinjah, the property of Messrs. Statham and Anderson, two of the old leases have been surrendered, and a smaller area of 4 acres repegged, and it is to be hoped that under the new scheme something may be opened out upon, which will repay the efforts of the long-suffering, but persevering lessees.

The only other place where systematic mining is carried on in the division is in the vicinity of Francis, and Donkey Hill, some 2 to 4 miles south from Moruya, and bounded by Candoni and Wamban Creeks. Here Mr. Thomas Batt has erected a 5-stamp battery, and during the year has crushed a number of small parcels of stone, which have averaged about  $\frac{1}{2}$  oz.

There was an outcry for the erection of a Government battery here some two years ago, which was said to be all that was required to make the place prosperous; but since the advent of Mr. Batt with his machinery, he has not, except by a very few, been fairly supported, and his plant in consequence is often idle. Doubtless the large number of men employed at the rebuilding of Moruya bridge, and in the river reclamation works, has had something to do with this; the men evidently preferring steady Government wages to the uncertainties and disappointments of mining in a not very rich locality. Some of the miners, however, especially Messrs. Fry and party, Foreman and Sons, Barling and Elliott, and Power and party, have done fair work; and for them, during the year, Batt has crushed 108½ tons for 52 oz. 14 dwt. 12 grs. of gold, worth 80s. per oz.

Within a few chains of the battery is Mr. Guy's silver mine, on which fair work has been done throughout the year. Nine men have been employed, and 300 tons of ore was raised for a yield of 3,000 oz. of silver; the stone also carrying 19 dwt. of gold per ton, and 10 per cent. of lead.

In this vicinity also about ten men make a living by fossicking along the creek and river beds.

*Nerrigundah Division.*

During the past year the quartz-mining industry in this Division has improved.

The Bumbo Gold Mining Company's mine at Bumbo, is the principal mine in this Division, and during the year about twenty men have been at work on this mine. From this property 1,009 tons of ore was raised and treated for a return of 690 oz. of gold, valued at £2,770.

Latty Bros., at Red Creek, Tinpot, Tuross River, crushed 39 tons of stone for a yield of over 7 oz. to the ton. There are two veins on this property, one over 4 ft. wide, and one about 9 in.; and the gold occurs in chutes in the small vein, some of the stone of which is extremely rich.

Utting and party have a vein near the town, which is improving as they attain greater depth; the last crushing yielded 21 oz. from 14 tons of stone.

Several other veins are being worked, or more correctly speaking being prospected, in some cases with encouraging results.

In alluvial mining about sixty Europeans and about fifty Chinese are making a living. Sometimes a patch is struck which pays good wages, whilst at other times rations are barely made. This class of work consists chiefly of re-working old ground in the different creeks and on the banks.

Several dredging leases have been taken up, embracing an area of 750 acres, on the Tuross River and Gulph Creek, but up to the end of the year no work had been done on any of them.

The amount of gold won for the year, in this Division, was 1,848 oz. 6 dwt. 6 grs., valued at £7,393 6s., which again shows an increase on the preceding year's figures; and the prospects for the incoming year, both as regards gold dredging and quartz mining appear very promising.

*Wagonga Division.*

In the Wagonga Parish of this Division, mining has increased considerably.

The Wagonga Gold Mining Company have crushed 1,500 tons, with satisfactory results, from a big, low-grade felsite lode, which is from 10 ft. to 30 ft. wide. They have a 20-head stamper battery, and two Huntingdon mills, capable of treating 800 tons per week. Shafts have been sunk to a depth of 130 feet on the lode, which is visible several miles on the surface, in a north-westerly direction, and has an underlay easterly.

There are thirty men employed on the mine.

The McDonald Gold Mine (Limited), situated on the north side of the Wagonga River, on what is known as Easdown's line of reef, has a lode 120 ft. wide, with hard quartz veins running through it, carrying very good gold. For the year 145 tons have been crushed from this mine, for a yield of 116 oz. of gold. This mine promises to develop into a good payable property.

Taylor and party, on the same line of lode have driven, in their claim, a distance of 75 ft. from the bottom of shaft, which is 65 ft. deep. The lode runs north-west by south-east, and the stone raised prospects 5 dwt. to the ton; but they have not crushed any stone this year.

Messrs.

"PIONEER" BATTERY, YALWAL, N.S.W.

Messrs. D. Fraser and Gray have been working the Belle of Australia Mine, and have treated about 50 tons which yielded 7 dwt. per ton.

Messrs. W. Conolly and G. Williams have been working their respective new finds at Whittaker's Creek, and have treated 20 tons of stone at the Belle battery, and the yield was considered very satisfactory, being nearly 4 oz. per ton.

The alluvial mines in Kianga Creek, where several claims are at work, have obtained some very coarse gold; one nugget weighing between 6 and 7 oz. A number of men are working in this locality and they seem satisfied, but experience great difficulty in keeping down the heavy influx of water, which at times is a very great drawback, the ground being deep and the stripping from 12 to 20 feet. The wash is from 1 to 2½ feet thick, and should the dry weather last a lot of men will continue to find employment in the creek.

There are several men working in Rat's Head, and other creeks, who are doing fairly well.

In the Narooma parish of the Division, the Mount Dromedary Company has treated about 1,000 tons of ore, which yielded 1 oz. of free gold per ton, and about 100 tons of concentrates which yielded from 4 to 8 oz. per ton. There are more than fifty men employed on the mine, and a lot of developing has been done this year putting in fresh tunnels. The Company has a five-head stamper battery, and two Huntingdon mills with two frue vanners.

N. Bailey has been driving two tunnels to prospect some veins, but they have not turned out satisfactory. During the year he has crushed 8 tons for 7 oz. of free gold. He is receiving aid from the Prospecting Vote to drive one of the tunnels.

W. Braithwaite has done a lot of prospecting during the year, and crushed about 10 tons of ore for a yield of 2 oz. free gold per ton. There is a five-head stamper battery on this mine.

W. Stephens, whose Little Wonder Mine adjoins Braithwaite's, has crushed 10 tons, which yielded 8 oz. free gold. He has sent a parcel of ore to Dapto works for treatment, but the returns are not yet available.

C. Marsden has taken up a lease below the Dromedary Company's property, and crushed a parcel of ore, which yielded 15 dwt. free gold per ton.

E. Parberry is driving a tunnel on a vein some distance down the creek from the Company's leases. He is receiving Prospecting Aid to drive the tunnel, but so far has not obtained anything payable.

On the north-western slope of the mountain, three leases have been applied for at the head of Rat's Head Creek, by S. Alexander. There are three veins running through the leases, which average about 4 inches wide, and prospect over an ounce per ton. He intends erecting machinery at once.

The alluvial workings on Mount Dromedary have considerably increased. Five hydraulic sluicing claims have been taken up by a Sydney Syndicate, who propose to erect very large cranes to shift the boulders.

Messrs. Wilson and White have been doing well in their sluicing claim, the wash-dirt being 14 feet thick, and carrying good gold right through. They are very satisfied with their year's results.

At Corunna, there are a few men working alluvial on the beach and some on the terraces, with fair results.

In the Bodalla parish of the Division six dredging leases of 100 acres each, have been applied for, on the Tuross River through the Bodalla Estate.

In reference to the Makin's Hill s.g. lease, there has been little work done. The dam was washed away by the floods, and this has retarded work.

Great activity prevails within this Division both in quartz and alluvial mining. Several crushing plants are about to be erected, and also machinery for hydraulic sluicing and dredging; which should give considerable impetus to the industry, and lead to fresh developments during the coming year.

#### *Cobargo Division.*

Very little mining has been done in this Division during the past year. At Montreal Mr. S. E. Vickery has a lease for sluicing purposes, on which he has a plant erected, valued at £1,200, consisting of a 30-horse power steam engine, concentrating and pumping appliances and sluice boxes. So far, the returns from this property have not been satisfactory, nor the prospects very good; and during the latter part of the year the works have been idle owing to Mr. Vickery having obtained a suspension in connection with his lease.

A few fossickers are scattered through the abandoned ground at Montreal, and seem to be able to make a living. All the gold obtained is alluvial, and is sold to the local storekeepers at Bermagui. The quantity won for the year would be about 40 oz., and was sold at from £3 15s. to £4 per oz. There are, unfortunately, no indications at present of any increase in mining in this portion of the district.

#### *Bega Division.*

During the past year, there has been but little mining carried on in this Division. Aid from the Prospecting Vote has been granted in two instances. In one case the country prospected has, so far, not proved the existence of gold in payable quantities, though some slight indications have been observed in the quartz. The ground being worked is to the north-east of Bega, and distant 10 miles.

A prospector named Jess having lately obtained aid, has been trying a bit of ground on Doctor George's Range, about 3 miles to the east of Bega. He sent away some stone for assay, and the result showed no gold but some traces of silver.

From inquiries made locally there seems to be little prospect, just at present, of any gold being won in this Division; owing to the rough nature of the country, and the expense likely to be incurred in prospecting.

#### *Wolumla Division.*

During the past twelve months the development of the Wolumla Gold-field can scarcely be said to have been carried on in a systematic manner, work having been checked by the fact that the large majority of the mines have been placed under offer to an agent of an English syndicate. In some cases a suspension of labour conditions has been obtained, and in others the labour conditions have been barely fulfilled.

The development of three properties has, however, been continued uninterruptedly. The "Eclipse" has been raising ore and treating it at a local battery with satisfactory results. There are three shafts on this property, each about 80 feet, and a tunnel driven 60 feet.

From the "Pacific" a large amount of ore obtained, and treated locally, returned a handsome dividend. The lowest level so far reached in this mine is about 160 feet, where there is a face of reef, varying from 3 to 6 feet, stated to be good payable stone. This mine has been systematically and creditably worked for the past two years, and is considered one of the best and most permanent properties in the Southern Division.

Messrs. Meaker and party's mine is looking well. They have cut a very rich vein in the lode, and continue to put out very rich ore; some tons recently forwarded to the Illawarra Smelting Co.'s works at Dapto returned 30 oz. to 40 oz. of fine gold.

The "Prospectors," the "New Venture," and the "Eureka" claims are all also on payable ore.

Messrs. Brady and White have finished the erection of their 5-head stamper battery, and have crushed some hundreds of tons of ore from their own mine, and also for the public.

The mines are continuing to produce good stone at the greater depth reached,—as in the case of the "Pacific," at 150 feet,—and with the advent of capital and up-to-date machinery this may be expected to prove one of the payable goldfields of the Colony.

#### *Pambula Division.*

Mining throughout this Division has been quiet during the year 1899, the principal gold-producing mines being stopped by litigation. The fact of payable gold having been discovered in the parish of Yambulla was reported to this office on 14th December by N. and J. G. Jensen.

Parish of Yowaka.—Returns received from Falkner's Gold-mining Co. (Ltd.), 85 tons of ore crushed for yield of 68 oz., gold valued at £3 12s. per oz.; from portion 19: depth of shaft, 147 feet; approximate value of machinery, £3,000.

George Harrison and Falkner's Co., portion 37, crushed and cyanided 246 tons of ore for 478 oz. gold; value, £1,630; depth of shaft, 180 feet; deepest level, 200 feet.

The Pambula Mines (Ltd.) treated 447 tons for 745 oz. of gold, valued at £2,533; and cyanided 206 tons of tailings for 552 oz. gold, valued at £1,766; depth of shaft, 130 feet.

The

The Treasure Syndicate treated 60 tons for 36 oz. gold, valued at £97.

W. H. J. Brown (App. 397) treated 41 tons for 60 oz. gold, valued at £216.

Several parties of miners have also been prospecting the old workings of cancelled gold leases in different parts of this field.

Ward and party crushed 94 tons for 41 oz. gold, and cyanided 35 tons of tailings for 18 oz. gold.

The Diorite Syndicate crushed 107 tons for 55 oz. gold, and 75 tons of tailings treated, yielded 61 oz. gold.

No new ground has been worked in this parish during the year.

Parish of Wyndham.—Mineral Lease 7,060, portion 4, has been steadily worked throughout the year for bismuth, with satisfactory returns. All other mineral leases have been, practically, idle.

Gold-lease portion 10 was worked for a few months, and a quantity of ore raised, but of such refractory nature as to be considered not payable.

Eight gold leases of 20 acres each, and one of 2 acres, were applied for by R. G. Gibbons (on Crown lands). He also registered eight agreements, 20 acres each, under Mining on Private Land Acts, for the purpose of mining for gold, silver, lead, tin, and antimony. Mr. Gibbons had some twelve men prospecting this ground for some months, but has since abandoned it.

William Cullen, P.G.L., portion 3, reports 200 tons raised, of which only a small picked parcel was treated. Depth of shaft is 63 feet.

John Miller, P.G.L., portion 1, has failed to return form sent to him; result of work, therefore, if any, is unavailable.

Parish of Gnupa.—Messrs. Vaughan and Screeck have completed the 100-feet driving for which they obtained Aid in April last. The results have been disappointing.

Parish of Yumbulla.—Early in the year A. G. Falkner applied for a gold-mining lease of 10 acres, and several miners also took up areas under their miner's rights.

On 14th December, 1899, N. and J. G. Jensen reported the discovery of what they considered payable gold on their prospecting protection area (quartz), viz., yield of gold, 4 oz. 16 dwt. 12 gr. from 3½ tons of ore; tailings not treated.

The different claims are widespread, in some cases being 3 and 4 miles apart. The following parcels of ore were crushed at N. Jensen's small water-power battery:—For Wm. Blissett, near Stanley Creek, 10 tons, which yielded 5 oz. 4 dwt.; for Greenlees and party, near Stanley Creek, 4 tons, which yielded 6 oz. 13 dwt. 12 gr.; for Brown Brothers, 2 miles from Stanley Creek, 10½ tons, which yielded 8 oz. 3 dwt.; for J. Smith, near Heathy Gap Creek, 3½ tons, which yielded 2 oz. 8 dwt.; for Burns and Blissett, near Heathy Gap Creek, 21½ tons, which yielded 7 oz. 8 dwt.; for G. Jensen, near Stanley Creek, 2½ tons, which yielded 1 oz. 13 dwt. 6 gr.; and for Jensen and party, Indigo Ranges, 3½ tons, which yielded 4 oz. 17 dwt.; tailings not treated. The gold, which is associated with silver, is valued at over £3 per oz.

A sample of ore from this locality sent to the Department for assay, gave as result 5 oz. 6 dwt. 17 gr. of gold and 2 oz. 14 dwt. 10 gr. of silver per ton.

The general complaint of the miners engaged is that, as depth attains, the ore becomes mineralised, and therefore cannot be treated successfully anywhere in the district.

Favourable opinions have been expressed by experienced miners of the prospects of this part of the Pambula Division.

Some twelve miners were engaged before the report of payable gold being found.

In the parishes of Burragate, Yuglamah, Coolangubra, and Howe, practically no work has been done further than a little prospecting.

#### *Delegate Division.*

During the year just ended, mining has decreased in this Division, and only three reefs are at present in operation, two of which are receiving Government aid. No crushing has taken place during the past twelve months.

The alluvial digging is principally carried on by Chinese in the old river beds with fair results.

Two leases have been taken up for dredging purposes, but no start has yet been made with regard to working them.

A considerable amount of mining is done within a few miles of Delegate, on the Victorian side of the Border, both alluvial and reefing; the last crushing from one reef (the Bonarjina) averaged 13 oz. to the ton. The gold won by the miners along the Border in Victoria is sold, and the proceeds mostly spent, in Delegate; but it has been excluded from the gold-returns for this Division.

#### *Goulburn Division.*

Owing to the continued dry weather during the greater part of the year, mining operations in this Division were greatly impeded, most of the mining being in alluvial deposits on the Shoalhaven and the creeks in the neighbourhood. The country is very dry, even in wet seasons, as there are no large creeks running through the auriferous deposits. If water could be brought on to the fields, there is no doubt good results would follow, and employment be given to a large number of miners.

During the year twelve claims were registered, and 855 oz. of gold obtained from 13,500 loads. Only one lease was applied for—40 acres for copper—and 44 applications for authority to enter on private lands were received, of which number thirty-three were for dredging purposes in the Wollondilly River. With regard to dredging, it may be added, that the country in this Division is, generally speaking, unsuitable for the industry, being too rough and rocky.

A large quantity of ironstone has been sent away from the mines at Marulan.

116 miners' rights were issued at this office during the year, also 1 business license, and 12 mineral licenses.

#### *Frogmore Division.*

Very little gold-mining has been done in this Division during the past twelve months. At Mobbs' Undaunted Mine some 50 or 60 tons of ore were raised and treated, but all the other gold leases have been idle. There are a few fossickers working in the southern portion of the district, but with what success is unknown.

### HUNTER AND MACLEAY MINING DISTRICT.

#### *Dungog Division.*

In this Division some activity has been displayed during the past twelve months, especially by James Chambers, at the Mountaineer Reef, Upper Wangat, who is sanguine as to cutting the true reef shortly. Others working in the locality, are, Simmons and party, who are sinking shaft in which the stone shows fairly good gold; Cobcroft and party, who are driving a tunnel to cut the Mountaineer Reef; and Hockham and party, who are also driving a tunnel, the stone in the face of which, when dollied, shows good prospects.

The principal mine of the neighbourhood, the Wonga Wonga, has the privilege of suspension of labour conditions at present—during repairs to machinery. Several crushings have taken place, which are said to be below anticipations; but, though invited, the proprietors have not furnished details of winnings.

Mr. Samuel Fielder has three men working (aided by Prospecting Vote) at the old Cherry-tree Reef, 4 miles from Dungog. The reef fluctuates considerably—from 3 inches to nil—but something good is anticipated in the neighbourhood of the old 170-foot shaft.

George Towns, with his son, is working at the Monkerai, on what would appear to be a good property, as the reef increases and gold improves with the progress of sinking. These men have won, during the latter portion of the year, by means of a hand dolly only, gold to the value of £140 3s. 6d.

Six gold leases, containing in the aggregate 30 acres, have been applied for in this Division during the year.

#### *Copeland Division.*

This Division has not for many years experienced so dull a period—if we except a spurt for alluvial on private land at Rawdon Vale, parish Knowla. Here, though as many as 100 men were employed during one period of the rush, only a few made really good wages, the sinking being about 40 feet. The place is now abandoned.

It is difficult to ascertain the gold yield for the year; but from such particulars as can be gleaned, it appears that upwards of 450 oz. from alluvial, and 160 oz. from quartz, have been won in and around Copeland.

The Hidden Treasure Mine, after many vicissitudes, passed at auction to a Sydney buyer, who is stated to be bringing good and powerful machinery all the way from Molong.

The

THE "BAKER'S CREEK" GOLD MINE, HILLGROVE, N.S.W.  
(View from the West.)

## 39

The Prince Charlie is reported sold to a Victorian syndicate, who propose to erect considerable machinery and cyanide plant. Information is being sought as to the deleterious effect refuse, after cyanide treatment, may have upon creeks used by the public and by cattle; as, in respect to such danger, it may be found necessary to protect the Back Creek which runs through the town.

There is prospect of large operations on the Centennial line of reef in the current year. The effect of renewed enterprise in this direction, with the additional facilities for treating ore, is expected to prove a great stimulus to many mines at present idle.

Seven applications were received during the year for gold-mining leases, which covered in all an area of 61 acres.

*Bulladelah Division.*

Mining, generally, in this portion of the District, has been slack during the past twelve months, and no new finds have been reported. The Curreki and Myall Queen properties have both been worked with but fair results only. A little prospecting has also been done by other parties, but nothing of a payable nature found.

At Paddy's Creek, where Henry Underwood reported having struck the reef "rich," the result of the year's operations has been disappointing.

Joseph Windross, whose concessions for the purpose of prospecting the beach between Smith's Lake and Seal Rocks have been extended for further six months, has been very ill for some time past, hence there are no results to report. He is, however, having a further machine constructed, by means of which he hopes to do something during the coming year. His chief obstacle to success, he states, is the presence, in an excessive quantity, of osmiridium—a difficulty which he alleges his past experience will now enable him to combat.

The quarrying of alunite at Bulladelah, and of limestone flux at the Myall Lakes, is still being proceeded with satisfactorily. About 1,000 tons of each of these minerals have been sent away during the past year.

*Kempsey Division.*

Generally speaking, similar conditions have obtained in this Division during the past twelve months as were reported for the previous year. There are no known auriferous alluvial fields in this district, and, as far as can be ascertained, no quartz-mining of any description was done. Indeed, with the exception of the tin find at Carrai, very little of interest in mining has occurred.

At Deep Creek, a gold-mining lease has been applied for, but the application has not yet been approved.

*Taree Division.*

Much prospecting for "alluvial" gold has been done in this Division during the past year; but it is to be regretted that the various parties have met with very little success.

During the year, the entire crushing plant connected with Andrews Brothers leases at "Cell's Field" has been idle, although the battery (now consisting of ten-head of stampers) is in good working order.

Messrs. Andrews Brothers, early in the year, surrendered most of their leases on this field, and afterwards "took-up" the best of the ground in a modified and more easily-workable area. It is hoped, therefore, to see their battery once again at work, and that there will be more satisfactory results to report for the coming twelve months.

During the year, six gold-mining leases, comprising a total area of 29 acres, have been taken up on this (the "Cells") field.

## PEEL AND URALLA MINING DISTRICT.

*Glen Innes Division.*

There appears to have been very little work done on the gold leases in force at Glen Elgin, and the greater portion of gold obtained in this Division was won from alluvial. There have been several special gold leases applied for during the year for the purpose of dredging; but all these have been abandoned, with the exception of four applications not yet dealt with by the Department.

*Kookabookra Division.*

Every class of mining in this Division is at a complete standstill, owing, principally, to the want of water for alluvial workings, and to the fact that the few quartz reefs worked have proved unpayable.

At beginning of the year Ditton and party erected a 5-head stamper battery on Mitchell River, driven by water-wheel. About 60 or 70 tons of quartz, obtained from the Old Welcome Stranger Mine, was put through, giving a return of 20 oz.; but this result not being satisfactory, the battery was pulled down and removed.

Cameron Brothers received Government aid for a cross-cut 50 feet in length, in the Old Butcher Mine, Bare Hill. The object was to cut the main reef at a lower level, but, so far, the reef has not been struck.

About 330 oz. of gold, 5 tons of tin, and 60 oz. of topaz, valued at about £1,616 10s., were obtained; principally from the old alluvial workings on Oban, Nowland's Creek, and Mitchell River. Owing, however, to want of water, only half time was worked.

Several leases have been taken up for dredging purposes on Nowlands, Backwater, Oban River, Paddy's Gully, and Mogg's Swamp, but up to present time no work has been done on the leases.

*Armidale Division.*

During the past year the various local Banks consigned, between them, 5,006 oz. 13 dwt. 6 gr. of gold, valued approximately at £17,600. Almost the whole of this gold would have been won outside of the Division, probably from Hillgrove and neighbourhood. The only gold-mine working in this district is the Great Britain, the manager of which, although requested, has failed to furnish any particulars as to work done, &c.

*Hillgrove Division.*

The principal mines in this Division are the Baker's Creek Gold and Mining Co., the Eleanora Gold and Antimony Mining Co., Baker's Creek Consols Gold-mining Co. Proprietary (Limited), Fuller's Hopetoun Syndicate, the Garibaldi Gold-mining Co., the Ruby Silver Mine, and Chandler River Copper Company.

First of importance, undoubtedly, is the Baker's Creek Gold-mining Co.

This mine has a truly unique record, considering all circumstances. The initial difficulties in opening up a property situate 1,500 feet sheer from the level of the surrounding country were enormous.

Nevertheless, with a life of twelve years, this mine has treated 120,000 tons of ore, yielding 190,000 oz. of gold.

Furthermore, during the current year it has reached its jubilee of dividends, aggregating the sum of £262,000, and averaging over £5,000 per dividend. From its initiation this property has never called upon its shareholders, but with a reef averaging under 4 inches (a veritable golden thread of wealth) has progressed steadily towards success.

The developments of the past twelve months indicate no depreciation of returns, inasmuch as the gold at the lowest level worked (No. 12) keeps up its average yield, and there is every indication of gold in more than payable quantity at No. 13 level. The prospects of the large area of available country at the shallower levels to the north of the main workings promise results equal to those already obtained to the southward.

The tonnage crushed during—

1897	totalled	13,729,	yielding	13,044	oz.
1898	"	12,542,	"	10,039	"
1899	"	13,181,	"	13,098	"

valued at about £3 9s. per oz.

From the above return it will be seen that the yield per ton for 1899 has exceeded the average of the past three years. During the current year (1899) three dividends of £5,000 each have been paid, two being won during the year proper. The machinery, all in working order, is valued approximately at £16,000; and for the year the battery averaged 42 head in

in constant work out of a maximum of 52 stampers. The number of men employed for the year averaged 170, portion being on wages, but the majority under contract. The main shaft has reached 970 feet, and the north shaft 235 feet. The driving has been considerably extended. The Company, during the year, suffered by the death of the manager, Mr W J Hill, and his place for some months past has been taken by the purser, Mr S H McGeorge. No improvements in machinery were effected, nor additions made, and in this connection it may be observed that there appears to have been no reserve fund created or maintained by the company.

The Eleanor Gold and Antimony Mining Co unfortunately cannot be placed amongst the dividend paying concerns of 1899. Its recent history is one of plucky and determined effort by the management, in face of crushings yielding only a couple of dwts per ton. This mine gave employment to an average of 163 men during the year, utilising machinery valued at £26,000, approximately, and running from 40 to 70 head of stampers. The improvements in machinery during 1899, were in the nature of additions to the battery, totalling £1,000 in value, and including a rock breaker, Beidan pans, vanner belts, and incidentals. The improvements in 1898 totalled £1,500. Suspension for full term was granted early in the year, but was only partially availed of. Transfers of isolated leases were made to the company. The tonnage crushed during 1899 totalled 14,000, yielding 4,256 oz, valued at about £3 10s per oz. The concentrates calcined during 1899 were 406 tons, valued at £3,633. The antimony yield for 1899 was 27 tons, valued at £395. All the above returns are approximate.

The development of the property during the year progressed as follows, mostly under contract.—South Shaft Stopping, 748 fathoms; driving, 302 feet, winzes, 103 feet, and deepened, 50 feet. North Shaft Stopping, 192 fathoms, driving, 151 feet, and winzes, 50 feet. From which it will be observed that virtually very little development actually occurred.

The Baker's Creek Consols Gold mining Co has shown considerable development during the year, though of no especial character, the last five months, however, being devoted to sinking only. The battery, to 27th July, ran full time, with full head, the property at such time, giving employment to eighty men, latterly, however, only about thirty men have been employed. Next month the battery will probably start again in full work. Recently a promising show of gold has been struck at the lowest level. The machinery has been improved and added to during the year, a Beidan pan and shaking tables and amalgamating barrel having been erected. Until then there had been no concentrating plant at this mine. Automatic feeders have also been added, and a multitubular boiler. At the present time the weight of the existing stampers is being increased to an equivalent of 22 head as against 15. The crushing possibilities of the battery have been added to by 25 per cent. Since last crushing the shaft has been deepened by 100 feet. No dividends were forthcoming during the year. The manager Mr S Mills, has been in control for two years past, and during that time, save for a slight fall for deadwork, expenses have been just about paid by the property. The prospects of the mine are considered decidedly brighter than ever they were before. During the past year 2,426 tons of ore have been treated, for a yield of 1,952 oz of gold, valued at £6,765 12s 11d. The shaft is 300 feet deep, and the vein, which averages about 6 inches, is very similar to that of the Baker's Creek. The Hillgrove Proprietary Gold mining Co has no returns for the past year. The property has been worked entirely by way of initial development, seeking for the Golden Gate and Baker's Creek reefs. The Cooney tunnel has been extended 800 feet, totalling in length 1,830 feet. The shaft has been deepened, and is now at 176 feet. The property has been recently connected by rail with the Sunlight Tramway, to the great advantage of the interest. The plant is valued at £2,000, comprising an and steam compressors, and rock drills, air cylinders, Cornish boiler, Worthington pumps, &c. The property, on the average, employed forty three men during the year.

Fuller's Hoptoun Scheelite and Gold Syndicate, whose mine is principally worked for scheelite, have sold during the year 4 tons of this mineral, at a price averaging £40 per ton, and have about 70 tons of untreated ore now at grass. The tonnage of auriferous stone treated, with the result, was as follows.—40 tons, yielded 63 oz, value, £233. The stone was treated at the Cosmopolitan Battery. The syndicate is just about completing the purchase from Mr Fuller, and contemplates adding to their interest several adjoining properties. The shaft is 100 feet deep, and the deepest tunnel level 400 feet. The reef varies in width from 3 inches to 3 feet. Working plant valued at £300 is on the property and in good order, and eight men were continuously employed during the year. It is proposed to float the interest into an extensive company.

The Garibaldi Gold-mining Co has virtually a nil return for the year. Valuable machinery is erected upon the surface, and remains apparently in good working order. The proprietary of this mine was harassed during the year by more or less continuous litigation, and possibly for that reason the labour conditions were somewhat ignored.

The Hillgrove United Gold mining Syndicate. A J Fuller, manager will probably, before long, be amalgamated with the Hoptoun Syndicate. During the year 148 tons of stone were treated from a reef varying in width from 3 inches to 3 feet, yielding 167 oz of gold valued at £600. Two tons of antimony were also won, valued at £50. The shaft is 160 feet deep, and the deepest tunnel level 300 feet. During the year six men were employed in the syndicate's operations. The value of its present working plant is inconsiderable, consisting only of a few trucks, rails, and the usual mining tools needful.

The average number of men employed gold mining in this Division during the past year was about 550. The approximate total quantity of stone crushed for the year would amount to about 29,800 tons, which yielded 20,524 oz. 7 dwts of gold, valued at £71,809 6s 1d, and shows a recovery from the previous year's decline.

An Electric Power Company has erected extensive works at Gara Falls, distant about 6 miles from the field, and built a dam capable of holding about 350,000,000 gallons of water. The future operations of this venture are awaited with great interest. The village of Hillgrove, which during the year became a municipality, is to be lit with electricity, generated by water power in lieu of steam, as heretofore, and it is contemplated that eventually Armidale, about 13 miles distant from the works, will adopt the scheme. A light tramway from Armidale to Hillgrove is also talked of. Contracts with the mining companies to run the batteries by means of the power have, however, not yet been secured. The margin between the figures of the respective interests is very considerable, and as the mining companies refuse to recognise any wood (fuel) difficulty as existing or likely to exist for many years, and furthermore require a guarantee of uninterrupted supply of power, under an hourly penalty for stoppage, it is to be feared that the immediate success of the venture is somewhat in jeopardy.

The unfortunate litigation of many months past between the Eleanor and Garibaldi Companies as to damage to workings, loss of tailings, &c. has had a baneful influence on the field, the Garibaldi, remaining virtually idle almost all the time, and both companies suffering financially to a considerable extent. Though an appeal is still pending, it is understood that, by mutual consent, it is to be abandoned, and there is every prospect of the companies, during the coming year, working *bona fide* and harmoniously side by side, if not eventually amalgamating.

All circumstances considered, the immediate prospects of the Hillgrove field appears to be promising. The want of water has, however, been a great drawback to the mining industry in other parts of the Division, during the past three years the average rainfall having been less than that of the past twenty years.

#### *Met Division (late Hillgrove West)*

Owing to the stoppage of the West Sunlight Reef Co., mining operations in this Division have not been as productive during the past year as that previous, and there having been no fresh developments, and very little prospecting done, a number of men had consequently to seek fresh fields for employment.

The West Sunlight Reef Co., employing about 120 men, ceased operations in August last. Up to that time they had crushed, during the year, 2,082 tons of quartz for 750 oz of gold, valued at £2,718 15s. The very poor run of stone met with in the mine exhausted the capital of the Company, which has, however, since been reconstructed, and development work will shortly be again commenced.

The Sunlight Gold mining Co had an uninterrupted run for the year, and is doing good work. They crushed 9,567 tons of quartz for 4,721½ oz gold, valued at £16,317 14s 5d. Some new machinery has been introduced into this mine, and steam gear has been substituted in place of the electrical hauling plant. About seventy men are employed on this property, and everything is proceeding satisfactorily.

There are several claims of minor importance in the Division, viz, the Starlight, the Twilight, the East Sunlight, the Centennial, and the Mountain Maid, all of which are reported "on gold." Little or nothing, however, has been done on any of these, nor have any returns from them been furnished.

The total output of the Division for the year amounted to 11,649 tons of quartz, which yielded 5,471½ oz of gold, valued at £19,036 9s 8d.

(Viewed from the South, and "Baker's Creek" showing in the distance.)

*Uralla Division.*

The continued dry weather experienced during the past year has again greatly retarded sluicing operations on this field; in fact, the only work that has been done has been carried on by means of cradling.

At Brown's Paddock, where costly machinery has been erected, only about four weeks' work was done during the past twelve months, owing to the scarcity of water. Special machinery had been erected upon this claim, in order to enable the same water being utilised over again without going to waste. A great rush occurred in the early part of the year to secure the bed of the Old Rocky River. Five special leases were applied for, amounting in area to 478 acres, and extending for miles along the bed of the river. These leases are to be worked by means of dredging, and now that the Gold and Mineral Dredging Act has come into force a busy time in this Division may be expected.

It is well known that the Old Rocky River contains very rich patches of gold, which in the early days the miners were unable to reach, on account of water and drift-sand. That the Dredging Companies will make an early start in the coming year may be looked forward to, and it is hoped in next report to be able to chronicle many of them as dividend-paying concerns.

Operations on another possible source for profitable gold production has been started near Uralla. It has been known for years that the cement and billy-stone on the face of Mount Jones have contained gold, and Mr. A. McGill, late of Mount Sherwood, decided to remove his plant there and to test these deposits; which he has done with most promising results. It is reported that he has received a tempting offer for the purchase of his rights from a Melbourne syndicate, who propose erecting a much larger battery to deal with the great quantity of cement known to exist at Mount Jones.

At Mount Sherwood and Enmore a deal of prospecting is being carried on, with very favourable results. Two leases for ground in this locality have been applied for during the past year, and fair shows have been struck in both leases. It is reported that in McKinlay's claim, in the parish of Enmore, which is being prospected with aid from the Prospecting Vote, is showing very fair stone.

The only claim at Balala deserving of special mention is the Little Gracie. During the past year this mine has yielded some wonderfully rich stone, 5 tons of which was crushed for 40 oz. However, it only appears to be in chutes, and the plucky owners deserve better luck.

It is believed that the mining industry in this Division will show considerable improvement during the coming year.

*Walcha Division.*

During the past year fifty-four miners' rights were issued in this Division; but very little mining has been done, there being only one quartz reef working.

A few miners are working on alluvial, but they are obtaining very little gold, and have been greatly hampered by the waterless seasons.

*Swamp Oak Division.*

During the past year gold-mining operations in this Division have been greatly hampered through insufficiency of water to enable the prospectors to try likely places for a new find. There has been, moreover, a general falling off in the industry. The most regrettable instance is in the case of the Highland Mary leases—the property of the New South Wales Gold-fields (Ltd.)—where, with perfect and up-to-date machinery, and good management, the results, so far, have shown such a loss to the company that they have applied for a suspension of the labour conditions to enable them to raise more capital, having expended in labour and machinery about £32,000. As reported last year, the prosperity of the locality depends very much on the prosperity of this mine; and it is to be hoped that the company will be induced to a further expenditure in development, or succeed in letting it to tributors who may prove successful in continuing the work. The Hoodlem Lease, and Messrs. Howard and party's quartz claim, are the only two mines at present working at Swamp Oak, both of which are merely in a prospecting stage. From the former, ore is being raised from a 4-inch vein, and 48 tons of stone yielded 48½ oz. of gold; from the latter, 16 tons of ore, won from a 6-inch vein, yielded 7½ oz. of gold.

At Niangala, the Lady Jersey Mine, which is also owned by the New South Wales Gold-fields (Ltd.), has been let on tribute to their late manager, who is at present employing about thirty men. From this property 549 tons of ore crushed during the year yielded 715 oz. 12 dwt. 20 gr., and 844 tons of tailings cyanided resulted in a return of 364 oz. 12 dwt. 15 gr. of gold—total 1,080 oz. 5 dwt. 11 gr., valued at £3,294 19s. Two other small claims are working on the Golden Spur line of reef, from both of which fair returns were obtained.

Very little work has been done at Shearin's Creek during the year, or since the cancellation of G. Smith's 25-acre lease. The only return received was from the Camp Fire claim, which is being worked by two men, who raised and treated 45 tons of ore for a return of 37 oz. of gold, valued at £129 10s., from an 11-inch vein. The depth of shaft and of the deepest level on this property is 100 feet.

No work has been done at Paradise for some considerable time, although prospects obtained on this neglected field have not been surpassed in the district. Only two men are working on the Glen Morrison field, which embraces a large belt of auriferous country.

*Tamworth, Nundle, and Bendemeer Divisions.*

In these Divisions also the mining industry has been greatly retarded during the past year by the prevailing scarcity of water, which in many instances has hindered the alluvial miner in the treatment of his stacked wash-dirt, and prevented the prospector from freely moving about in search of new discoveries.

During the year several applications have been made for dredging areas within these Divisions; and now that the Dredging Bill has been passed, it is expected that considerable sums will be expended in the necessary appliances and machinery required in the development of this class of mining. On the McDonald River, in the neighbourhood of Bendemeer, 640 acres have been taken up for the purpose of dredging for gold and tin; and applications have also been made for the land known as Anderson's Flat, and on the Peel River, in the locality of Bowling Alley Point. The late Mr. Wilkinson, Government Geologist, held a very high opinion as to the richness of Anderson's Flat, and believed that heavy deposits of gold would be found, if machinery were erected sufficiently powerful to contend against the influx of water expected. This land has been taken up as a gold-mining lease, and good prospects were obtained, but the water being too great for the machinery, the ground had to be abandoned. It is thought that if operated on by dredging plant, the win of gold resulting would justify the expenditure.

In the Tamworth Division thirteen applications for mineral leases were made during the year—twelve being for tin and one for copper—aggregating a total area of 758 acres; six gold-lease applications were lodged, which embraced the 640 acres above referred to as taken up on the McDonald River; three agreements were registered under the Mining Laws; and one mineral license, three business licenses, and 101 miners' rights were issued. Nothing payable was done in quartz-reefing, but in alluvial mining it is estimated that about 260 oz. of gold was won, valued at £1,020 10s.

In the Nundle Division eight special gold leases, covering an area of 265 acres, and four gold leases of 19 acres, were applied for; and 246 miners' rights, and nine business licenses were issued. The yield of gold for the year, as compared with that of previous years, shows, it is to be regretted, a falling off.

At the Golden Gate, from which was won good returns for the year 1897, work has been hampered to a considerable extent owing to the deaths of two of the principal shareholders. From this mine 255 tons of ore were treated for fair results. Depth of deepest level on the underlay, 190 feet; dip of underlay easterly.

The Tamworth Gold-mining Company's property is the principal mine in the District, and splendid progress has been made under the able management of Mr. R. Bennett. The lode varies from 3 to 15 inches in width, and is worked by tunnels, winzes, and stoping. Depth of shaft 225 feet, and deepest level is now 320 feet. The lode is bearing north-west and south-east. During the year this company have treated at their own battery 1,000 tons of ore for satisfactory results.

In the Excelsior Mine, owned by Messrs. Gazley and Murray, the width of lode is from 8 inches to 2 feet,—underlay bearing west. The amount of ore treated was 215 tons, for fair returns. Suspension of work has been granted to the owners of this mine on account of influx of water.

In the Quacka Nacka, the property of John Wright, the width of lode is 20 feet, underlay bearing west; 50 tons of stuff have been crushed, and about 20 tons await treatment.

The Black Snake Mine has about 80 tons at grass, and has been a paying concern for the year,—gold having been obtained at varying intervals in patches.

Lahz

Lahz and party have been doing good prospecting work throughout the year, and have raised about 60 tons of quartz. Alluvial mining has been much impeded owing to the dearth of water. The work done has been principally in the nature of fossicking; but the operations carried on at Red Hill for the past twelve months, chiefly on the Cement Lead, have been the means of furnishing employment to a fair number of men. Fogarty and party have driven a tunnel about 450 feet into the hill to cut the lead which fed the old Red Hill, and after this heavy undertaking have succeeded in cutting the channel. They at once opened out on it, and found the width to be from 25 feet to 30 feet, with an average thickness of from 7 to 8 feet of payable cement. They have had four men employed blocking out for the last six months with satisfactory results.

By means of hydraulic sluicing, Messrs C. Clark and party (four men) have had a few washings from the cement formation in this locality, and, taking the washings throughout, have reaped very fair returns,—although at times delayed through not having sufficient water to work the hydraulic.

In and around Bowling Alley Point there has been a great deal of fossicking; but the only alluvial claim worth mentioning is the Nil Desperandum, at Two Grain Flat, where some extensive work has been done, and some very fair results obtained. This flat is very heavy to work, and is impossible to operate upon to advantage without good pumping-gear. The depth of shaft in this mine is 75 feet; the length of deepest level is 2,400 feet; width of lead 100 feet.

Mining in the Bendemeer Division has been very dull during the past twelve months. The only gold-mining done in this district is alluvial at which some seven men were occupied; but lack of water prevented the accomplishment of very much work, and only 45 oz of gold, valued at £168 15s., were won. Forty miners' rights and 11 mineral leases were issued during the year.

#### *Stewart's Brook Division.*

During the past year 1,223 tons of quartz have been crushed in this Division for a yield of 898 oz 17 dwt 12 gr, valued at £3,481 13s 9d, which is considerably below the previous year's results. The returns from the New Royal Standard Mine, from which such handsome yields were won, have fallen off considerably; but owing to the late developments in this property matters have recently very much improved, and better yields may be shortly expected again. The chute of gold, which was dipping north, suddenly dipped south, necessitating much heavy dead work in drives and winzes. This company has a very complete air compressor plant which keeps the mine well ventilated.

The Stewart's Brook Company's property, from which such rich stone was crushed, is now lying idle from want of enterprise. Though mining matters on this field are so dull, it is really healthier in tone than it has been for some time, owing to the amount of prospecting that has, and is being done—with very encouraging results in several cases.

The Imperial Standard, on the west side of the Brook, are on very good stone, and good returns should soon be forthcoming. There are about 150 men employed on the field.

The Cook's patch, a very important new find, which was prospected with Government aid, was so rich that over 200 oz of gold were dollied out of 80 lb. weight of ore, and splendid stone is still showing in the face-working.

With regard to machinery, there are three batteries on the field, which aggregate 30 head of stampers worked by water and steam power. About 150 miners are employed in the Division, all of whom are quartz reefing.

#### *Moonan Brook Division.*

During the past twelve months the amount of gold won in this Division was 879 oz, valued at £2,932 9s. 6d. This amount shows an increase on that of the previous year, notwithstanding the fact that fewer miners have been employed. In quartz mining the average yield per ton was nearly 1 oz 3 dwt, which must be regarded as very satisfactory, considering that none of the quartz crushing batteries in the district employ any but the rudest gold-saving methods. An attempt, however, is being made to erect concentrators.

Aid from the Prospecting Vote granted to several parties in this Division has helped to prove ground which otherwise might yet have remained unworked.

About 80 miners were engaged on the field during the year, and it is pleasing to record that no accident, even of a trivial description, has taken place. The prospects for the coming year are considered very fair, as several of the reefs now being worked in the locality should yield good results.

#### *Barraba Division.*

With regard to gold-mining, there has been very little progress in this Division during the past year, and, owing to the scarcity of water and lack of capital, the industry has been almost at a standstill. The Crow Mountain and Woods' Reef fields are almost deserted, many of the miners, who would, in the ordinary course of events, have been content to work on, in the hopes of "striking it rich," having left to try their luck at the tin and diamond mines in the Inverell district. Several parties have had aid from the Prospecting Vote, but in each case with unsatisfactory results. From Graham's mine, at Woods' Reef, between 200 and 300 tons of quartz were crushed, with, it is understood, a fair yield of gold, but particulars are unavailable. Very little and in some cases no quartz has been crushed from other mines in the Division.

Towards the close of the year three dredging leases on Ironbark Creek, comprising 240 acres, were applied for. Boring operations have been carried out upon the area, but nothing else has been done.

#### *Bingara Division.*

Comparatively speaking, little gold has been won in this Division during the past year, the work being principally prospecting and fossicking, giving employment to some sixty or seventy men.

The past and present dry seasons no doubt account for so few miners being able to make a living about here, and when the creeks again hold water, which can only be after a wet winter, there is every reason to believe that at least six times the number of men at present earning a precarious existence can make a living in this locality.

At Spring Creek, about 4 to 6 miles south east of the town, there has not been more than a dozen men at work at any one time fossicking there; at present there are nine. This creek has been worked by fossickers for the past thirty years. George Anderson is putting in a tunnel there, having received aid from the Prospecting Vote, but so far has not cut the reef he expects to.

At Bobby Whitlow Creek, about 5 miles north east of Bingara, not more than twelve men are working. In the past a good deal of alluvial digging was carried on there, but continual dry seasons have made it almost impossible to work, on account of lack of water. Places in the creek that a few years ago were never known to be dry are completely so now, rendering fossicking or work of any kind impossible.

John McDonald has been working a lease of 2 acres at Bobby Whitlow, known as the Mountain Maid, for some time, and has a small crushing plant erected. During the year he raised 30 tons of ore, the crushing from which averaged 1 oz. 4 dwt. to the ton.

The All Nations Mine, which was worked some years ago, and, by all accounts, grossly mismanaged, is situated on the hill overlooking the town. It has lately passed into the hands of a local syndicate, who intend pumping the mine out, and raising a couple of hundred tons of ore for treatment. If the yield is satisfactory, no doubt capital will be invested; and as there is a large body of ore, this mine should find permanent employment for many hands, and prove very beneficial to the town.

At Top Bingara some thirty men are working, principally fossicking, and there is really nothing noteworthy to report.

Some eleven leases, which comprise about 440 acres of the Gwydir River, in close proximity to the town, have already been applied for as special dredging areas. Until, however, dredging operations actually commence, it is, of course, impossible to definitely say whether gold exists in the river bed in sufficiently payable quantities to warrant this large area being taken up. Men who are qualified to form an opinion think that dredging will pay well here.

#### *Coonabarabran Division.*

Mining operations in this Division have been practically at a standstill throughout the past twelve months. Neither Hona and party, McIntyre, nor Dalmain have continued any of the work at "Scabby Rock" or "Moorgen" referred to in the last Annual Report. The first named party struck water in the 65-foot shaft on the west of the rock, and Hona, who had a farm in the locality, having sold out, further operations ceased.

There

There are no regular miners in the district, or places where mining is carried on, but occasionally some of the farmers who have seen something of mining wash a few dishes of dirt. In this way a farmer named Botfield obtained a few grains of gold at Bungabah, about 13 miles southerly from Coonabarabran, and on the Castlereagh River. He also obtained colours in Greenbah Creek, about 20 miles southerly from Coonabarabran. Mr. Botfield intends to give the localities previously tested a further trial when he can spare the time.

Some specimens of coal were found by W. L. McIntyre, while digging a well on Mr. H. A. Croxon's settlement lease, situated about 3 miles southerly from Coonabarabran. Mr. McIntyre states that he has to continue this well a few feet deeper, and will report anything further that comes under his notice.

During the year only five miners' rights were issued in this Division.

#### NEW ENGLAND MINING DISTRICT.

##### *Drake Division.*

Although there is a very noticeable decrease in the output of gold compared with the previous years' returns, the deficiency is to some extent compensated for by the large production of other mineral, and from a commercial point of view, the result of the past year's operations, shows that the value of gold and other mineral won is in excess of the previous year by £700.

The principal local mine in operation during the year was the Pioneer Co's. Mine at Mount Carrington, in which twenty men have been regularly employed, many of them working on the tribute system which has proved very satisfactory to both miners and mine owners.

This property comprises an area of more than 30 acres and is held under six gold-mining leases, and the mine has during the year produced a large quantity of both gold and copper. The principal operations have been concentrated on portion G.L. 6, on which along the line of lode several shafts have been sunk, the deepest being 200 feet deep. The principal work done on this block during the year has been between the 60 foot and 140 foot levels, where stoping and driving north and south has been carried on extensively. In this part of the mine the lode varies in width between the levels from 9 inches to a foot, and is composed entirely of copper sulphide, the commercial value of the ore being £10 10s. 6d. per ton. In No. 2 shaft south the company has been driving on a gold-bearing formation at the 50-foot level; the vein is small but rich in gold. In No. 3 shaft driving and stoping is extensively carried on, and the lode at this point is 3½ feet wide at the 90 foot level. In No. 4 shaft sinking has been pushed along in a most energetic manner, and from the 100 foot level upwards they have been operating on a lode 5 feet wide, and as the sinking of this shaft proceeds more solid sulphide ore is met with. The returns from this part of the mine throughout the year the manager states have been very satisfactory.

On the south-western boundary of G.L. 6, a tunnel has been driven on another vein which for a distance of 150 feet appeared very promising, but at this point suddenly pinched out. A shaft was then sunk at the mouth of the tunnel, with the result that at a depth of a few feet a formation 3 feet wide was met with composed of copper ore of a high grade. Lower down, on the south side of the hill, they have also been sinking, driving, and stoping on a lode between 4 and 5 feet wide composed of peacock ore, black, grey, and red oxide of copper, averaging about 23½ per cent. copper, whilst the gold contents are equal to 1 oz. 16 dwt. to the ton. There are several veins and leaders traversing this company's property which are fairly rich in gold and copper. On G.L. 101, which is owned by the same company, a shaft has been sunk on a reef called "Lady Duff." The leader is very small, being not more than 5 inches wide, in an oxidised formation, but is extremely rich in gold, the average yield being 12 oz. of gold per ton.

With the exception of the deep workings on portion G.L. 6, the greater part of the operations of this company is confined to the oxidised zone, which only extends to a depth of 70 or 80 feet.

Staunton and Company's Mine, which is situated at Sawpit Gully, north of the Pioneer Mine, is a mineral lease of 40 acres of land, and throughout the year has been worked exclusively for copper ore. The deepest shafts on this block are not more than 90 feet in depth, and the lode down to that depth averages 1 foot wide. This mine, like the Pioneer Co.'s blocks, is worked on tribute by four parties of miners of two men in each party. During the year they have taken out 85 tons of copper ore, which has been sold to the Sulphide Corporation at Cockle Creek, and realised for copper and gold contents £1,250. Operations during the past year have been confined to mining out the rich patches of mineral at shallow levels, no sinking having been extended beyond 90 feet.

Parker and O'Connor's Mine, locally known as the "Rainbow," is the next of importance, and is situated on the highest point of Mount Carrington, on portion G.L. 67. This property was originally worked as a gold-mine, and for several years past gave excellent returns of that metal until the oxidised belt was passed through, which only extended to a depth of 80 feet. At this depth copper was met with, on which they have continued to operate during the past two years with a fair amount of success. The main shaft is now down to a depth of 120 feet, on a lode averaging 18 inches wide and carrying copper ore of a high percentage. During the past year they have taken out and sold to the Sulphide Corporation at Cockle Creek 82 tons of ore, which realised £810.

The Perseverance Mine, owned by Hunting and Parker, is situated on G.L. 71, which is north of and adjoining Parker and O'Connor's block. The deepest workings in this mine are at the 90-foot level, where the lode is fully 3 feet wide. During the year they have raised from this mine, and sold as ore, 58½ tons, which yielded 125 oz. 15 dwt. of gold, of the value of £503, and copper of the value £40 11s. 6d.—total value, £543 11s. 6d.

The Lady Mary Mine, owned by Hawkins and Tubman, is situated on G.L. 72, and is worked as a copper mine. This mine has only recently resumed work under the present proprietary, and a deal of dead work had to be performed before any ore was won. They had to sink a shaft in hard ground to a depth of 105 feet, and then to drive a considerable distance before the lode was met with; consequently the quantity of ore raised is small. The lode at the 105-foot level is 3 feet wide, and composed of blue and green carbonates of a high grade; 22 tons have been raised, and one parcel of 8 tons, which was sold to the Sulphide Corporation, realised £126 12s. 10d. They have on the ground 14 tons of equally rich ore ready for market.

The "Lone Hand" is a mine owned by Parker, Rasmussen, and party. It is situated on gold lease 65, and is worked as a gold mine. The deepest shaft is 80 feet deep, and the vein on which they are operating is only 4 inches wide. From this mine during the year, 56 tons of ore have been taken out, which yielded 177½ ounces of gold of the value of £448.

The "Nil Desperandum" mine is situated on the northern slope of Mount Carrington, and is held as a gold lease by E. Hancock and two others. For several years past it stood high on the list for its annual gold yield, but for the past two years it has been in a languishing condition, although the owners have done a good deal of prospecting during that time. The deepest shaft on this mine is 105 feet deep. During the past year only 20 tons of stone have been raised from this property for a yield of 14½ ounces of gold, of the value of £50.

The "Adeline Mine" is on private land, and has recently been purchased from the trustees of the estate of the late George Smith by an English syndicate. It is at present idle, though work has been carried on intermittently during the past year, and several parcels of ore from the upper levels have been put through the mill with very satisfactory results. Preparations are now being made to carry on operations in this mine on an extensive scale. This property has so often been referred to in previous annual reports that it is not necessary to say more than that the mine has been worked for gold and copper. The main shaft has been sunk to a depth of 100 feet, at which level the lode is between 5 and 6 feet wide, and has been driven upon north and south a considerable distance. The quantity of ore raised during the past year is 230 tons, which gave a return of 60 ounces of gold, of the value of £179 12s. 11d., and 7½ tons of copper, worth £68 15s. The mining plant on this property consists of a 15-stamp battery—with Wheeler's pans, buddlers, and all necessary gold-saving appliances—driven by a 28-horse power stationary engine, and also a winding engine of 10-horse power; the value of the whole being £2,000.

The Lady Jersey mine, which is situated at Long Gully, in the parish of Cavendish, 6 miles south of Drake, has been for years past the premier gold-producing mine on this field; but it is to be regretted that this year its output of gold shows a very marked decrease, owing, in a great measure, to the oxidised belt of country having been passed through, and the mineral in the lower levels of the mine being of such a refractory nature that it is impossible to extract the whole of the gold contents with the very primitive appliances at hand. The plant used is a 5-stamp mill, driven by an 8-horse power portable engine, the crushing capacity of the mill being about 30 tons of ore per week. A Frue vanner has been used at the end of the amalgamation tables, and the tailings from the battery have been allowed to pass over it; by which means about

about 800 tons of concentrates have been saved, which, at the lowest estimate, represents £4,000 as value of gold contents, irrespective of zinc and copper. During the past year, 1,035 tons of stone have been raised and treated for a yield of 721 oz. of gold, of the value of £1,958. The deepest shaft on this mine is 180 feet; but the deepest level at which operations have been carried on is only 100 feet. The number of men continuously employed on the mine throughout the year is twenty-six. The value of the machinery in use is £500.

It is probable that during the incoming year this property will change hands, as it is necessary to raise capital for the purchase and erection of more up-to-date gold-saving appliances to deal with the great bulk of refractory ores which are met with in the lower levels of the mine. A local gentleman is now negotiating with the present holders for the purchase of the mine on behalf of some English capitalists. With a fair amount of capital judiciously expended in the erection of large works, with proper milling and gold-saving appliances, there should be a long term of prosperity ahead of this mine. During the past ten years this mine, although worked on a small scale and with the most crude appliances, has yielded gold of the value of £56,261; and the shareholders have not, at any time, been called upon to contribute one shilling towards paying the working expenses of the mine.

A revival in mining at Lunatic Reefs has to be reported. This part of the field, distant about 7 miles north from Drake, had been partially deserted for some years past; the only signs of mining activity displayed being a few old miners, who confined their operations to fossicking in some of the abandoned shafts on the various lines of reefs.

Early last year Messrs. Taylor and Withers took up a block of land south of the old Lunatic Prospecting Shaft, and after sinking to a depth of 30 feet met with a small chute of gold. It was at first thought by the old hands that this was a pocket and would quickly pinch out, as the veins at Lunatic always did; but as the sinking proceeded the chute increased in richness to a depth of 60 feet, and up to the present the proprietors continue to take out very rich stone, and the vein does not appear to be pinching. In sinking the shaft 8½ tons of stone were obtained, which, when crushed at the Adeline mill at Drake, yielded 116 ounces 6 dwt. of gold, of the value of £466 6s. 10d. The discovery gave a fresh impetus to mining in the locality, and several gold-mining leases have been applied for north and south of it.

At Tooloom there has been a slight stir in mining during the past year; but, so far, nothing of a permanent character appears to have been discovered there. Several small parcels of fairly rich quartz have been met with and treated at Payne's mill. Altogether 200 tons of stone were treated for a yield of 100 ounces of gold of the value of £350.

At Wann's Claim, situated on gold lease 254 and distant about 2 miles north of Drake township, there is a large deposit of auriferous and argentiferous matter, which has been worked in a desultory manner by different parties for some years past with varied results. More recently a number of Sydney gentlemen—known as the "Sawpit Gully Gold and Silver Mining Company," of which Mr. Edgar Hall is the managing partner—acquired this property, and matters are now being put in train to test the property thoroughly. The principal work done in connection with this mine during the year, has been wholly connected with the question of the treatment of the ore, the existence of a large body of mineral having been previously proved beyond doubt. In February last a parcel of 12 tons of the ore was forwarded to the Government Metallurgical Works at Clyde for treatment by concentration and cyanidation. The results were received in July, and showed an assay value of 13 ounces of silver and 3 dwt. of gold to the ton. The cyanidation of the dry-crushed ore was a failure, owing to the clayey nature of some of the ore; but 7·7 per cent. of concentrates were obtained, which, sold at Dapto, realised a gross sum equal to £1 0s. 6d. per ton. The tailings were worth 50 per cent. of the original ore. Subsequently, the company made some tests on a few tons of ore, which were crushed at one of the local batteries and concentrated on a Frue vanner, and the sands and slimes cyanided separately. The results showed an extraction of silver 59·3 per cent., and gold 90 per cent. of the assay contents; and this is stated by Mr. Hall to agree very closely with the average of the numerous laboratory tests made by the company during 1898. The failure of the water supply, owing to the dry weather, prevented the continuation of this work on a larger scale; but the results are considered good enough to warrant the company proceeding with the erection of a treatment plant on these lines. The Company have decided to issue fresh capital for the erection of a plant. With this in view, Mr. Edgar Hall, on behalf of his company, has successfully arranged with the White Rock Silver Mining Company for the purchase of their immense milling plant; and steps have been taken to remove this, and re-erect it at Sawpit Gully. Mr. Hall has also arranged for the purchase of the residue of the Rivertree Proprietary Company's plant at Rivertree, which will be removed to Drake forthwith. The plant proposed to be erected consists of a 50-stamp battery, to be driven by a 250-horse power engine. The cost of the plant will be about £5,000.

The yield of alluvial gold for the past year exhibits a very noticeable shrinkage, which, to a great extent, is due to the extremely dry season which we have passed through; the scarcity of water on most of the old gold fields having very much retarded sluicing operations. Another reason is that the number of Chinese in this Division has greatly diminished, many of them having found employment on the old diggings at McLeod's Creek and other places; their winnings, though small individually, used very much to augment the annual gold yield. The increase in the price of tin has also caused an exodus of Chinese from here to Stanthorpe and Vegetable Creek.

The chief sources of alluvial gold in this division are Tooloom, Pretty Gully, and Frazer's Gully, in the north, and McLeod's Creek, Poverty Point, Millera, Ewengar, and Lionsville, in the south. The output of gold from those places aggregate 2,499 ounces 12 dwt., showing a decrease of 182 ozs. 3 dwt. on the yield of 1898.

Some 250 men are employed in alluvial mining within this Division, about one third of whom are Chinamen.

What is likely to be a most important feature of the mining industry in this district in the near future is the dredging of our auriferous river beds, notably the Clarence and Timbarra rivers, which are known to be gold bearing for many miles of their course. In dry seasons, when either of those streams have been low, and the long reaches of gravel beds have been exposed, numerous fossicking parties have made a living by sluicing the gravel above water level; and in some cases, where they have been fortunate enough to meet with patches of the beach where the gravel was shallow, and the bottom moderately soft, fair wages have been made. The Clarence River, from the junction of Tooloom River to Yulgilbar, is everywhere more or less auriferous, and almost the whole of it which passes through Crown Lands has been applied for, as Special Gold Mining Leases, in blocks varying from 50 to 100 acres each. Several special gold leases have also been applied for in the Timbarra or Rocky River. One enterprising company, who have taken up a large area of the Clarence River in the parishes of Clarabell and Ellerslie, known as the Clarence River Gold-dredging Company, have so far advanced with the construction of their dredge that they will be in a position in a very short time to pioneer the industry in this district. The portion of the river about to be tested is considered to be the best on the upper part of the stream.

Whether the whole of these rivers will be found to be profitable is very doubtful, but it will not be astonishing if some sensational returns are obtained, as it is well known that almost the whole of the south-western bank of the Clarence River, and all the banks of the many creeks and small watercourses are auriferous. Good returns have at times been got by fossickers right in the bed of the Clarence and Rocky Rivers during a dry season, and there is every prospect of the majority of the claims proving profitable; while from some, no doubt large dividends will be recovered. The result, therefore, of the first essay in gold dredging in this part of the Colony is looked forward to with a great amount of interest.

#### *Tenterfield Division.*

Mining in this Division is not in a flourishing condition. During the past year seventy-five miners found employment in the district—fifty-seven Europeans and eighteen Chinese. At Boonoo Boonoo several parties are still sinking and driving for gold, but so far without very good results.

Messrs. Stevenson and party during the year have been cutting a tail-race and drive to drain their claim. They obtained aid from the Prospecting Board to continue their drive 300 feet further, on the line of reef, 200 feet of which has already been completed.

At Dismal Swamp, Messrs. Capponi and party, who have also been in receipt of aid from the Prospecting Vote, have driven 300 feet and done a little tunnelling without any tangible result.

At Five Bull, at the other end of the Division, a few men are at work, but so far have met with no success.

In this Division, as elsewhere, the drought during the greater part of the year interfered a good deal with the mining industry, but with a prospect of better seasons this district should see a revival.

A dredging lease application has been lodged for the bed of Demon Creek, but, as the application has not yet been dealt with, no start has been made with the erection of any plant. The banks of this creek are auriferous, and the same parties have applied for two gold leases for portions of the flats adjoining its watercourse. The prospects obtained upon these are stated to be good, but so far nothing further has been done.

It is estimated that about 325 oz. of alluvial gold, valued at £1,158, have been won in this Division during the year.

*Wilson's*

*Wilson's Downfall Division.*

Beyond a little prospecting in the ranges and gullies by the silver miners about Rivertree, very little gold-mining has been done in this Division; and though gold has been found, it has not been in sufficient quantities to pay for working.

A gold-mining lease at the head of the Clarence River, for dredging purposes, has been applied for, but, as at the end of the year the application had not yet been dealt with, no preparation to work it had been made.

## CLARENCE AND RICHMOND MINING DISTRICT.

*Grafton Division.*

From inquiries made, it would appear that the only mines in this Division in connection with which any work has been done during the past year are situated at Yugalbar and Cangl. Very little information with regard to them is available, as no returns have been furnished. So far as can be ascertained, no gold has been won in the Division during the last twelve months, the mines having been occupied cross-cutting and driving.

Beyond four applications for gold leases, six applications for gold dredging leases, and one application for a mineral lease, and a few applications for mining tenements, the mining work has been practically "nil" in this Division. During the year 127 miners' rights and five mineral licenses were issued.

*Maclean Division.*

There are only two miners engaged in mining in this Division. Late in the year they applied for a sluicing claim of 2 acres (to be worked by means of ground sluicing), also a dam site, a water right, and tail-race, and these were subsequently registered.

The claim is situate about  $1\frac{1}{2}$  miles in a south-westerly direction from Mount Double Duke, in the county of Clarence. No gold has yet been obtained.

*Coramba (late Nana Creek) Division.*

The prospects of this district cannot be said to have improved since the Report for 1898 was prepared, and the circumstances therein detailed have not in any way altered for the better; in fact, rather the reverse.

It is now recognised that the reefs so far opened up—and many of them at very great expense, irrespective of the erection of most complete and valuable machinery, both for the crushing and the saving of the gold—do not, so far as tested, continue to carry their precious burden to any great depth; and this is the more disheartening after powerful and expensive pumping machinery has been placed in position.

This is much to be regretted, as more than one company, whose mines are now virtually closed down, are confidently supposed to be in a position to sink to a depth that would, once and for all, decide the question, whether the gold would not again "make," at even, say, 1,000 or 1,500 feet; and the standing reward offered by the Department in the latter case, should materially assist the necessary expenditure. The deepest shaft in the district is given at 210 feet.

Every mining centre in the Division has, during the past year, undergone a shrinkage. Lower Bucca is almost abandoned. The battery has been sold and removed to Tallewadjah Creek, and all that remains of a once fairly prosperous mining camp is about half a dozen miners, working on Government aid. A few small crushings have been taken out at odd times, but the returns have not been payable. Early in the year, Mr. Barbour erected cyanide works for the treatment of the accumulated tailings. The return from 1,219 tons is 245 oz. gold. He estimates to have lost over 100 oz. by using charcoal instead of zinc shavings in the early part of the year.

At Nana Glen, the James Syndicate have got their winding machinery erected, but had the misfortune, during flood some months back, to have their shaft workings ruined by the soft mud and slush that worked in from the country, which, generally, is rotten and swampy.

At Coramba but little is being done. An unsuccessful attempt was made during the year to float the Lady Elsie into a no-liability company. Negotiations have, it is believed, been pending for working the Coramba King on tribute. The Golden Spur, owned by G. E. Bale and party, and No. 1 on the same line, owned by W. Vanderkolk, are the only two claims on this part of the field where any work whatever has been done.

At Upper Bucca Bucca, the Beacon Gold-mining Company in the early part of the year knocked off all hands and let several tributes to different parties of employees, who, at tributes from 10 to 25 per cent., did fairly well, so long as the Company gave them; but as the tributes were only from month to month, and the rate rose and fell at the will of the Company, the men got tired of working on so one-sided an arrangement. There were in all eleven different parties of tributers, who raised between them 414 tons of ore, which was crushed for a gross return of 330 oz. 14 dwt. of gold.

At the Upper Orara, the Advance Orara men have kept pluckily at work, but owing to the drawbacks of heavy water and a small working party of poor men, they have done little, and the mine is now almost abandoned. Their crushings totalled 62 oz. of gold from 161 tons of stone.

At the Little Nymboi, the only parties at work have been the Bray Brothers and E. Henderson. The former worked their gold lease on Sandstone Creek with fair results in the upper level, but when that was worked out, and fresh sinking had to be started, the water proved too heavy for them, the mine, it may be said, being almost in the bed of the creek. They have now ceased work here, and have gone to the "New Year's Gift," O. Anderson's old gold lease, portion 156, to try the stone there. Mr. Henderson spent a lot of time and money in trying the Waratah and Fad reefs, with little success. One small crushing gave an ounce of gold to the ton, but this class of stone disappeared only too quickly.

The Hidden Treasure, on Nana Creek, has been taken up—15 acres in all—by a party who have had the mineral tested, with apparently gratifying results. At Mole Creek the Kangaroo King, which opened up well with the year, is now abandoned. Their first crushing gave 66 oz. of gold from 53 tons, but the subsequent crushing yielded but 9 oz. of gold from 45 tons of stone—only paying carting and crushing expenses—and the last not paying even that. Work was suspended, and the ground is now idle.

The Little Dorrit is worked by S. McNamara and party. They have crushed about 50 tons of stone for 30 oz. of gold taken from above the 60-foot level. They are now cross-cutting a distance of 200 feet north from the south side of the range, under aid from the Prospecting Vote.

From the Lilla gold lease, owned by R. S. Keats and Ross, 141 tons of stone have been crushed for a yield of 124 oz. of gold. The reef is from a foot upwards in width. It is now being worked by tributers.

At Tallewadjah Creek only a few small parties are struggling along with indifferent success. Sharpe and Morrow have purchased the battery which was recently owned and worked by Mr. T. H. Barbour at Lower Bucca. They have removed it, and are now re-erecting it at Avery's Creek. About ten men are working in this neighbourhood.

The only gleam of sunshine in the district is the Queen's Record Mine, owned by a Grafton syndicate. During the year they have raised 2,180 tons of stone for a yield of 1,240 oz. of gold. They have also made a valuable discovery in coming on what is apparently a fresh make of stone in the bottom level, about 350 feet from the outcrop. The reef varies from about 2 feet upwards. In the top level it is a massive body of ore going as wide as 5 feet and over, but in the lower levels the general average is from 2 to 3 feet.

Numerous parties in this Division have been in receipt of assistance from the Prospecting Vote during the past twelve months, and it was hoped that the results obtained would have turned out more encouraging than, speaking generally, has proved to be the case.

*Dalmorton Division.*

The number of gold leases at present in force in this Division is sixteen; but some of these are lying idle and others are being worked at a loss.

There have been fourteen applications for gold leases during the twelve months, three of which have been refused. Some large areas have been taken up at Pine Creek, for the purpose of thoroughly testing a lode of ironstone which contains small quantities of gold. The Occidental Gold-mining Company has 40 acres on this lode and intends to give the property a good trial. They have raised 25 tons of ore and forwarded same to Cockle Creek for the purpose of having it treated by cyanide process. This Company is also driving a tunnel 100 feet in length to try and crosscut the lode in another place on their property. The quartz is only very poor and expected to yield about 6 or 8 dwt. to the ton.

Kennedy

Kennedy and party, at Mosquito Creek, have struck a nice vein carrying very rich gold, and their return from a recent crushing of 41 tons quartz, was 83 oz. 17 dwt. This reef presents the appearance of being a permanent one.

The Abercrombie Mine, at Dinner Creek, crushed two small parcels of quartz with fair results, 12 tons yielding 48 oz. of gold. The reef unfortunately has cut out and the owners being of opinion that this mine will not pay to work any further, intend abandoning this ground.

Stockyard Creek Mine was worked for a short time during this year, and two small crushings taken out; in all 40 tons quartz, which yielded 37 oz. of gold. The owners have abandoned this property as they find it impossible to pay their way from the results of crushings. The Black Slate, Little Dora, Mount Rea, and several other old properties are lying idle with no prospect of being worked, as the owners cannot make them pay their way.

Mr. W. J. Ford of Dalmorton, is erecting a twelve head steam stamper battery with which he proposes to crush for the public. He expects to have it completed early in the coming year.

J. Elliott and party have struck a nice little reef at the 40-mile peg on Grafton Road, 4 tons of quartz from which yielded 6 oz. of gold. The reef is only about 4 inches wide, but carries very good gold, and presents the appearance of continuing for some time.

The alluvial miners are still working in Chandler Creek, and all get a little gold—just sufficient to pay for rations and provide for a mere existence. In other portions of this Division, however, the alluvial miners are doing much better, and in New Zealand Gully, about twenty-five men are at work who now and again strike a fairly good patch. A few men are also working on Wellington and Cungilbung Creeks, but do not get much gold.

On the whole, although there is not much fresh to report, the mining industry in this Division has a more promising appearance than for some time past. The best prospects at present appear to be in and about the western and north-western portions of the district; for although some of the leases in the parishes mentioned, in last report, viz., Cunglebung, Cowan, Wellington, Bardool, Urania, &c., have been abandoned, others are still being applied for, and are giving good results, so far as can be ascertained, with the limited facilities for crushing; and the erection of a powerful ten-stamper battery (steam) at Dalmorton may be accepted as an evidence that faith in the mines of that portion has not yet been lost.

Although the Division also affords employment to about sixty alluvial miners, it might be mentioned in this connection that no Chinese are working on any part of the field.

Six applications for dredging leases, representing 440 acres, were applied for prior to the passing of the Gold and Mineral Dredging Act of 1899, and will therefore require to be dealt with under subsection 2 of section 28 of that Act.

#### *Woogoolga Division.*

Mining in this Division is at an absolute standstill, all the gold leases having been abandoned, and only a few fossickers have been on the field during the last five or six months. These latter have won amongst them about 67 oz. of alluvial gold, valued at £241.

A few men are beach-combing north of Woogoolga, with poor results; but there are no miners at present at Corinda Creek, and the field is now practically abandoned.

During the early part of the year 20 tons of quartz were crushed, which yielded 14 oz. 10 dwt. of smelted gold, valued at £55.

Several of the abandoned reefs have been proved to carry payable gold, but, owing to the great influx of water into the workings, and the want of sufficient funds to erect machinery to successfully contend with the water, the miners were unable to work them.

No gold leases were applied for during the year.

#### *Ballina Division.*

Mining in this Division keeps falling off year after year, only twenty-five miners rights having been issued last year. It seems to be the general impression of the men engaged in the work that the beaches in this locality are about played out, and that the heavy work involved in stripping the terraces down to the wash will not pay, as the cost of rations consumed while engaged in that work more than covers the returns after a scrape. One thing in favour of this sort of work is that anyone can set in provided they have enough money to buy a couple of copper plates, a long-handled shovel, and a few boards to make a long tom.

It is not an easy matter to arrive at the gold won in this Division, as it nearly all passes through the hands of the storekeepers for the purchase of stores. The Banks here do not purchase gold; about 106 ozs. have, however, been forwarded by them to the Mint on owners' account, which realised an average of £3 10s. per oz. It is estimated that, approximately, a total of some 250 oz. of gold was won during the past year. This would represent a yearly return of about £35 per man engaged in the industry, but would not represent a labourer's wage at any other occupation.

No gold or mineral leases have been issued during the year.

#### *South Woodburn Division.*

In this Division the year's return in connection with the beach mining is even worse. The value of the gold won amounted only to £85, which, divided among five miners would give each but an annual return of £17 for his labour.

At Jerusalem Creek, Mr. A. Rayward has two men engaged mining on alluvial sand. He has a small cyanide plant, valued at £50; and during the year has treated about fifty loads, but with what result is unknown.

On the whole it can be only said that the mining industry in this locality is in an extremely languishing condition.

### COBAR MINING DISTRICT.

#### *Cobar Division.*

The past year has been a very dry one throughout this District—very little, if any better than its predecessors—and consequently there has not been nearly as much prospecting and mining work done as there otherwise would have been had there been a fairly good season; in fact, the Great Cobar Copper Mine is the only mine in the district that has worked throughout the year without cessation. As far as present appearances go, there does not seem much prospect of any great improvement, as far as rainfall is concerned, for the coming year, which is to be deplored, as it is believed that a year or two of good seasons would cause a large amount of prospecting work to be done. New ground would be prospected, present localities would be developed, and the district would be thoroughly worked and proved to be the greatest and most important mining district in the Colony, if not in Australia, as at present it can hardly be considered to be above the infant stage—just beginning to walk.

Reference to The Great Cobar Copper Mine, which is the principal mine in the District, will be found under the heading of COPPER.

The next mine along the line is the "Cobar Gold-mines, Ltd.," otherwise called, and better known as, "Fort Bourke." There has been very little development work done in this mine during the year, but what has been done has resulted in giving fairly good returns, the management having devoted their attention and capital to the erection of machinery, purchase of plant, &c., which is a very complete and extensive one, unsurpassed in the district. The Department is indebted to the courtesy of the manager, Mr. John Fox, for the following description of the plant, &c.:—"The shaft, which is now sunk to a depth of 236 feet, measures 11 ft. x 4 ft. 6 in. overall, and is divided into two winding compartments each 2 ft. 10 in. wide between skids, and one ladder-way 3 ft. 11 in. wide. It is close timbered with hardwood from the surface to the 216-ft. level; the centering between compartments is also of hardwood, 2½ inches in thickness. Poppet-heads are erected over the shaft, the centre of pithead wheels being 42 ft. 6 in. above surface brace. At a height 17 feet above collar of shaft a landing brace is constructed, with a tramway carried on trestles leading therefrom for use during work of development. The winding engine house, 30 ft. x 20 ft., is situate on the south side of shaft. The winding-gear consists of a pair of horizontal engines, having 14-in. diameter cylinders, 24-in. stroke, and capable of raising a load of 2½ tons at a speed of

500 feet per minute ; gearing, 4 to 1. The two winding-drums are 7 feet in diameter x 1 ft. 6 in. wide—loose on the shaft, and each fitted with clutch and brake gear. Indicators are also fitted in gear with the drums, showing position of cage in shaft. The ore will be landed at the surface brace in trucks and conveyed to the ore shoots, where it will be tipped, the fines passing through the grizzlies into a lower shoot leading directly to the ore bins. The ore which requires breaking will pass through the ore crushers, and thence to the ore bins, the supply being regulated by adjustable doors at mouth of shoots. The sides of each grizzlie are carried up to a height of 7 ft. 6 in. to form hoppers. The ore crushers—two in number—are fixed directly over the ore bins, and driven direct from the engine-shaft. The ore breaker engine-house, 18 ft. x 12 ft., is situate to the south of ore bins. The engine is a horizontal, having a 12-inch diameter cylinder, 16-inch stroke, and capable of developing 45 indicated horse-power. The ore bins have a capacity of 100 tons, and are built throughout of ironbark timber, well bolted together with 1½-inch bolts. The bottom is divided into two shoots, leading to wrought-iron discharge doors at an angle of 45 degrees, each door being provided with a lever for raising and lowering same. A tunnel is constructed immediately below the ore bins, through which the ore will be conveyed in trucks over the tramway into the mill, where it will be tipped into the ore bins over battery. The mill house, which contains the battery and engine-room, is 109 feet long by 68 feet wide. The battery consists of 100 head of stamps, erected in two lines of 50 each, placed back to back. The power for driving battery is supplied by two 75-horse power Wheelock engines, each having a cylinder 14 inches diameter, stroke 3 ft. 6 in. The exhaust steam is conveyed into feed water heaters, from which the water for boilers is taken. The capacity of the battery may be taken at 250 tons per day. The air compressor and dynamo house is a building 45 feet x 17 feet, and is divided into two parts ; the one at the southern end containing the dynamo and engine for generating electricity for lighting purposes, and the other the air compressor. The air compressor is compound, having high-pressure steam and air cylinders of 14 inches diameter, and low-pressure steam and air cylinders of 22 inches diameter, with a stroke of 22 inches. The air receiver is fixed on the north side of the mill house, its length being 30 feet and diameter 5 ft. 6 in. The main air-pipe, running from the air receiver to the mine is 4 inches diameter, and is carried down the shaft to the 216-foot level, and branches to various levels are laid as work proceeds. The boiler house is 46 feet by 25 feet 6 in., and covers the new boiler setting. There are two boilers of the Lancashire type, each 30 feet long by 8 feet internal diameter. Their combined horse-power is equal to 440 indicated, and they are intended to supply the whole of the steam required on the mine. The old boilers, situate on the south side of the mill house, will be kept ready for use in case of emergency. The chimney stack is 70 feet in height, square in section (4 ft. 1½ in. x 4 ft. 1½ in. inside at top) and fitted with a lightning conductor. The tailings, after leaving the battery, will be conveyed to a sump, from which they will be lifted by a centrifugal pump, driven by a 10 inches x 15 inches horizontal engine, and delivered into the spitzkasten, where the slimes will be separated from the sand and conveyed by a launder to the slimes dam. The sand is carried through launders to the distributors over the top leaching vats. There are two tiers of vats, each consisting of five steel vats 30 feet in diameter by 8 feet deep. The top tier is supported by a strong framework of ironbark timber, and the bottom tier upon joists of ironbark. The piers supporting the whole of the superstructure and vats are of brickwork, resting on a concrete foundation. The piers are three in number, each 164 feet in length, the outer ones being 3 feet wide at base, and the centre one 4 feet. Tramways will be laid between piers for the purpose of trucking away the residues after treatment. The extractor house is on the western side of vats, and will contain two 4-inch centrifugal pumps (for pumping solutions to the vats and water to the supply tank for spitzkasten), one distributor and three extractor boxes, two mixing vats, zinc lathe, and filter press. The power required in extractor house will be supplied by a 10-horse power horizontal engine. There are also three solution vats each 20 feet in diameter by 10 feet deep." Since the completion of the plant, the number of men employed has been increased threefold, and it is expected that during the coming year, under the able management of Mr. Fox, good results will be obtained from the extensive development works now being carried on. This mine, like nearly all the mines on the field, consists of a low-grade ore, and is almost entirely dependent on the cyanide process, the discovery of which has been a great boon, and proved the salvation of this district.

The Occidental has been the most consistent gold-mine on the field, but last years' drought proved most disastrous to it, having caused it to be shut down for want of water for six months out of the twelve. During this time the management, however, were not idle ; the tank was much enlarged, the machinery greatly added to, and a really good cyanide plant erected, which has proved a valuable asset to the property. When the mine again commenced work in July last, the management found themselves with a Bank overdraft of £5,000 ; but by the end of the year this was paid off, and enough money was in hand to pay the shareholders a 3d. dividend. This is one of the soundest mines on the field, and, although of a very low grade, there is an unlimited supply of ore which, thanks to the cyanide process, will pay the shareholders a handsome return for their capital. During the year the manager, Mr. Faull, resigned, and was succeeded by Mr. John Davis, who has proved himself worthy of the Directors' confidence. Mr. A. Chapple is in charge of the cyanide plant, which has been proved to be a thorough success.

The other gold-mines in this district are the "Great Peak," "The Young Australian," "The Great Western," "The Berriungie," "The Mount Pleasant," &c., but all of these mines have been idle most of the year. The Young Australian has been somewhat disappointing to the shareholders, but the plant has been increased by the construction of a cyanide plant, and the manager, Mr. Gudgeon, expects, during the coming year to show the shareholders better results. The Great Western has also added to the plant, and will probably show fair results in time to come ; it is an important mine, but has been worked in the past under disadvantages. The Mount Pleasant is being worked on tribute by the Copper Mine Syndicate, they having taken it for five years with the option of purchase. There are numerous other small mines in the neighbourhood being prospected.

At Mount Boppy the "Anglo Australian Exploration Company's" property, like many other mines, has been idle most of the year for the want of water. Some really good work has been done here under the management of Mr. F. H. Granstedt, who has shown himself to be a thoroughly practical mine manager. Extensive machinery will shortly be erected, and when rain comes to give them a good water supply, this is expected to become a real live locality.

At Mount Drysdale several mining properties are located, notably the "Mount Drysdale," "Eldorado," "Billagoe," &c., the most important of which is the first-named. Here again the want of water has been the drawback, but a fairly good amount of developing work has been done, and the plant has been increased by the erection of a cyanide plant. In its earlier days some phenomenally rich stone was produced from this mine, but of late years it has been very disappointing to the shareholders, and shares fell to a nominal price. A change, however, has again come, and in December rich ore was struck. On the 13th the manager wired to the legal manager that he had struck something wonderful, and later on the same day he wired, "Wonderful improvement ; gold showing in lumps in face and underfoot" ; while yet later he wired assays, "Gold, 105 oz. ; silver, 24 oz." The mine was twice visited during the month by the Mining Warden, who reports having found a body of stone at different places sparkling with gold, that the developments were wonderfully rich, and that the richness showed every prospect of lasting a considerable time. Shareholders were naturally jubilant, and the shares rose from 2s. 6d. to 22s. 6d. Mr. William, the manager, having resigned, Mr. Horsely was appointed in his place. Mr. John Leah is the legal manager and Mr. W. J. Hogan, who owns nearly one-half of the mine, is Chairman of Directors. The other mines on the field have done very little work, and no returns have been forthcoming. The once "all gold and little stone" Billagoe has shown no returns for the labour on it ; but, like the Drysdale, may some day come again. The shareholders of the Eldorado are also hopeful that the long-looked for may come at last, as it joins the boundary of the Drysdale, where the rich stone has been procured.

About 25 miles from Mount Drysdale, between there and the River Darling, is Gundabooka Mountain, where it was reported last year several gold leases had been taken up. Though a little prospecting work has been done there, very little real solid work has been effected, as, owing to the drought the place has had to be deserted. Good prospects have, however, been obtained, and in all probability, when favourable seasons come, there will be some good gold obtained in the vicinity.

Taking everything into consideration it is pleasing to be able to state that this important mining district, as a whole, is in a prosperous condition. The population has increased, and a year or two of good seasons, providing plenty of water, will make the mining industry boom, when many of the smaller mines will be vigorously and profitably worked.

#### *Nymagee Division.*

Four gold-leases were applied for, and 59 miner's rights issued in this Division during the past year ; but owing to the want of water, very little gold-mining has been effected. At Restdown, which is about 30 miles in a north-westerly direction from Nymagee, the Messrs. Knights erected a small battery ; but, unfortunately, the field has been idle almost ever since. With a good water supply, and a battery on the ground, it is thought the locality will eventually prove payable.

*Bobadah*

*Bobadah Division.*

Proceeding about 35 miles in a south-easterly direction from Nymagee we come to Bobadah, where the now celebrated Overflow Silver Mining Company's mine is situated. This property, which is really a gold mine—that being the principal product obtained from it—has always been a mystery. A large amount of money has been spent on it in developing work and plant, and though it has always been considered a good property, the only result to the shareholders has been “paying out” without any “paying in.” The want of water has also been greatly against this mine, and it no sooner gets into full work than it has to shut down, either from want of water or of coin. In last year's report it was stated that this property was believed to be a good one, and nothing has since transpired to warrant a change of opinion; yet it seems to be the irony of fate that it has never, so far, been productive of good results. There are several smaller mines in this locality being prospected, chiefly “Hilman's Tank,” but, as yet, no returns have been produced from any of them.

*Nyngan Division.*

There were 83 miners' rights issued in this Division during the past twelve months, but, so far as is known, the only two persons engaged at gold-mining were those at work at Hood and party's prospecting claim.

*Mount Hope and Gilgunnia Division.*

The year under review has been most severe in these Divisions for miners, as well as for other industries directly connected with the soil. The long continued drought and the parched-up country presented almost insuperable difficulties in the path of exploration. For four years the rainfall has been very low, the heat excessive, grass extremely scarce, and the cost of carriage for all requirements (necessarily high so far from economic means of communication), a very heavy drawback to prospecting and mining developments generally.

Still, in the face of such grave hindrances, the annual returns of ore raised, as compared with similar returns of the last few years, are not unfavourable to the year just past, and amongst the mining community a very hopeful feeling prevails for the coming year, as the potentialities of this district are very great.

The likeness of the mineral country between Mount Hope and Gilgunnia to the physical features of the country about Johannesburg (Transvaal) and of the South African country generally is remarkable. Numberless small hills, or kopjes, rise in succession as far as the eye can reach, all apparently of similar formation. In two of such hills are now being successfully worked the copper lodes of Mount Hope and Central Mount Hope; and in another similar hill the Mount Allen Gold Mine is located. There appears, therefore, to be an immense virgin field before the prospector in these Divisions, though at present handicapped by drought, high prices for carriage, and comparative inaccessibility.

Mr. Warden O'Neill, in 1891, commented on the urgent necessity of railway extension to this part of Riverina, and pointing out that easy and cheap transit is a very important factor in developing the resources of the country, mineral or otherwise, strongly urged that no time should be lost in undertaking so necessary and important a work. His present successor, Mr. Warden Treatt, desires now—nine years later—to emphasise the suggestion then made.

It is nothing short of industrial heroism, he says, for men to endeavour to cope with Nature's forces in this waterless district, so far cut off as they are from any base of ready and rapid communication; and this deficiency sadly hinders the opening up and settlement of this extensive portion of the Colony, which will not always be considered desolate because comparatively waterless.

The mineral riches and the fertile soil in the valleys of this large area must, sooner or later, attract closer attention, and then science and industry will surmount the present drawbacks, and the mining pioneers be followed by “closer settlement.”

In the Mount Hope Division the principal gold-mine is the Mount Allan, which is situated on Ironstone Hill, about 12 miles from Mount Hope. In this mine there is an immense formation of auriferous ironstone slate, and during the past year 7,294 tons have been treated by cyanide process for a yield of 1,433 oz. of gold, valued at £5,012. There is still about 1,500 tons of stone at grass and awaiting treatment. Prospecting is also going on in the mine. The manager contemplates starting battery and cyanide operations again early in the coming year.

Tullias' Lookout Prospecting Claim, situated about 6 miles due west from Mount Hope, is being worked under Government aid. A shaft, 100 feet deep, has been sunk, and the prospector has now been granted aid for 50 feet of cross-cutting. No payable gold has yet been found in this mine, unfortunately, and the prospects at present do not appear too promising.

A Warden's Court has been lately established at Mount Hope, which it is thought will prove of great convenience to miners in the surrounding neighbourhood.

On the Gilgunnia goldfield there is a 15-head crushing plant, valued at £3,000, and a number of claims under miner's right have been at work in the vicinity during the past year. A fair amount of mining and prospecting has been done, and 1,198½ oz. of gold, valued at £4,668, was obtained.

The “Her Dream” Gold-mining Company, a party of eight men, raised 210 tons of stone, which was crushed for a yield of 988 oz. 9 dwt. of gold, valued at £3,700. The depth of shaft in this claim is 210 feet, and the deepest level is 150 feet. The vein is 6 inches in thickness, dips to the eastward, and bears north-east by south-west. The dip and strike of the veins in Martin Seigel's “Last Chance” and in Osmetti and party's claim are in the same direction. From the “Last Chance” (three men) 70 oz. 15 dwt. 12 gr. of gold, valued at £267 lls. 7d., was won from 18 tons of stone, raised from a vein varying in width from 2 to 18 inches; and Osmetti and party (also three men) won 111 oz. 4 dwt., valued at over £400, from 63 tons of stone raised from a 3 to 6 inch vein.

Recent crushings from some of the claims on this field have yielded from 4 oz. to 7 oz. of gold to the ton, and in view of these satisfactory returns the prospects of the field for the coming year have certainly improved. It is expected that many of the abandoned claims will be repegged in the early future, and further and more efficient prospecting be done on them.

## ALBERT MINING DISTRICT.

*Broken Hill Division.*

Correctly speaking, there has been no gold-mining carried on in this Division during the past year. The only gold won was that obtained by the Broken Hill Proprietary Company, Limited, in leaching their roasted sulphides and lead carbonates, by which process 459 oz. of the precious metal were produced, valued at £1,836.

*Milparinka and Tibooburra Divisions.*

Owing to the severe drought that has been, and is still, prevailing throughout these Divisions, it is to be regretted that mining operations were greatly retarded, and no progress made during the past year. The absolute want of water and feed to carry on work with for so many years has driven the greatest number of the miners away from these fields, whilst those remaining are not making more than a bare living as miners.

The Burke Syndicate, at the old Warratta Reefs, have been employed for a great part of the year in repairing the engine and plant, which were much out of order from bad usage and lying idle so long. The water conservation arrangements also required much to be done in the way of repair that it took several months to complete. They have a 15-head battery, and have erected a cyanide plant close by. They put through 100 tons of old tailings that had been lying on the ground for about four years, and obtained therefrom a yield of 54 oz. of gold; which result the manager was well satisfied with. The company have another boiler on the road from Bourke, the one at the mine not being able to generate sufficient steam to drive the battery and cyanide at same time. The manager states that a large number of hands will be put on at their leases to raise stone and do other work almost immediately. When this is done it is expected that considerable activity will be created on the fields.

At

"NEELD'S" PROSPECTING MINE, WYALONG GOLD FIELDS, N.S.W.  
(General View of Chlorination Works and Battery. Shaft in distance, to the right.)

At Warratta West the lessees of the Brilliant and Golden Hope have been putting down shafts to enable them to crosscut into the reefs on the east. The Brilliant had a trial crushing of 5 tons, with the result of 2 oz to the ton direct from the battery, and 2 oz 7 dwt by the cyanide process. This must be considered a most satisfactory return. A small test crushing from Jeffrey's gold lease yielded at the rate of 4 oz to the ton.

The Warratta East gold leases, Mount Diwes, have not been working for some time owing to there being no water to carry on with. A sample of good stone, recently strack, has been taken to Broken Hill for treatment, but the result is not yet available.

The four gold leases at New Bendigo are also at a standstill for want of water, of which there is none on the field. The lessees were sinking a shaft to the 100 foot level, and driving east to cut the main reef, but the absolute want of water has caused a complete cessation of all mining work until rain falls.

With regard to alluvial mining, the Mount Brown field has fallen off greatly, and the few miners remaining can only just make "tucker." Latterly an idea got abroad amongst the miners that by deep sinking a good lead would be struck, and two parties took up old ground and commenced to dive from a low level in an easterly direction in the expectation that they would strike a good lead. Glover and party, from the 230 foot level, put in a dive over 300 feet. They struck wash at the distance of 250 feet yielding from 7 to 14 dwt to the load, but this in no way bears out the hope that a good lead would be found. The second party is not yet on wash. There are other parties working their claims in the usual way, and just earning a living. The puddlers are the only parties—by putting through large stacks of wash—who can make a comfortable living on the field when there is water.

The alluvial field in the Tibooburra Division is falling away very much in yield, it seems to have been nearly all worked out for prospecting. Here, again, the puddlers are the only ones who can make a little better than a living, as it is only the surface that carries gold, and the granite rock being so near the surface there is no depth of sinking, but even these have been idle some time, their dams being dry.

The total yield of gold won in these Divisions during the year was—

Milparinka—Alluvial, 400 oz	£1,600 0 0
„ Quartz, nil	
Tibooburra—Alluvial, 605 oz 4 dwt	2,420 16 0
„ Quartz, 30 oz	120 0 0
	£4,140 16 0

The regular price paid for gold in these Divisions has been £4 per oz

Wilcannia Division.

Practically no mining has been done in this Division during the past twelve months, probably owing to the drought-stricken condition of the district, the rainfall at Wilcannia for the year having been under 5 inches. There is one gold mining lease in force at Bouley, about 50 miles south west of Wilcannia, but no information in respect to its prospects is at present available.

The statistics from which the following Table has been compiled are collected as carefully as possible by the Mining Registrars, but in many instances they experience considerable difficulty in obtaining correct information.

TABLE showing approximately the number of Miners employed in Metalliferous Mines, the Quantity of Gold won, the Area of Ground worked, and the Value of Machinery employed in Gold-mining in the Colony of New South Wales during 1899

The Department is indebted to the Deputy Master of the Royal Mint for the information contained in the following Table.

Much of the gold deposited in the Mint is sent to Sydney through Banks, which give as its place of origin the name of the branch consigning it ; and it has been found impracticable to keep accurate returns of gold from localities often lying so near each other as really to form part of the same gold-field. It has been decided, therefore, to discontinue the form in which this table has previously appeared, and to base these returns, in this and future reports, on the twelve Mining Districts only. It is thought that the greater accuracy thus made possible will give these statistics a higher value than they formerly possessed.

With reference to the gold returned as "Localities unknown," it may be stated that satisfactory arrangements have now been completed whereby, through the courtesy of the various Bank officials, this factor will be in future greatly diminished, if not entirely eliminated.

QUANTITIES of Gold, the product of New South Wales, received into the Royal Mint, Sydney, during 1898 and 1899, compared.

Difference in excess of Customs House export entries	10,718·87	

The above statement is compiled from returns kindly supplied by the Deputy Master of the Royal Mint, Melbourne, and by the Collector of Customs, Sydney. The

The system now adopted by the Department in arriving at the output of gold for the year is to add the quantity received at the Royal Mint, Sydney, to that exported through the Customs (deducting, of course, the quantity exported by the Mint, which appears in the Customs Return), and to the result, thus obtained, is then added the quantity of New South Wales gold received at the Royal Mint, Melbourne, in excess of that entered through the Customs for export to Victoria.

The following figures show how the yield for the year 1899 is arrived at.—

	oz.	£
Gold exported in bars, dust, quartz, and concentrates ...	253,317	920,173
Gold received by the Mint, the product of the Colony ..	243,554	836,978
	496,871	1,757,151
Less the quantity exported by the Mint through the Customs ... ..	11,394	48,208
	485,477	1,708,943
Add the difference between the New South Wales gold received at the Melbourne Mint and the quantity passed through the Customs .. ..	10,719	42,872
Estimated yield for 1899 ... ..	496,196	1,751,815
The yield for the year 1898 was ... ..	340,493	1,244,330
Net increase for the year ... ..	155,703	507,485

The following statement gives the yield for each month of the year 1899.—

	oz.	£
January ... ..	38,681	132,371
February ... ..	20,774	72,968
March ... ..	34,720	122,514
April ... ..	31,654	109,413
May ... ..	14,626	52,262
June ... ..	39,775	133,454
July ... ..	62,862	222,357
August ... ..	45,355	162,904
September ... ..	30,431	110,188
October ... ..	78,550	277,999
November ... ..	38,980	140,239
December* ... ..	59,788	215,146
	496,196	1,751,815

\* The quantity and value of New South Wales gold received during the year at the Melbourne Branch of the Royal Mint, in excess of quantity accounted for through the Customs, are included in the yield given for this month

The gold received by the Mint during the quarters ending the 31st March, 30th June, 30th September, and the 31st December was, respectively, 64,824 oz., 52,695 oz., 54,362 oz., and 71,673 oz.

Less Increase ... ..	.. ..	.. ..	.. ..	22,742
Decrease in yield for 1899 .. ..	.. ..	.. ..	.. ..	21,731

The above table, comparing the returns sent in by the Mining Registrars for the last two years, shows a decrease during 1899 of 21,731 oz.; but the actual year's production as ascertained from more reliable channels of information—the Mint and Customs returns—exhibits a very material increase, whereby strong evidence is furnished of the fact that the information obtained by the Mining Registrars is far from complete. It must not, however, be overlooked that these officers meet with many difficulties in obtaining complete and correct returns from lease and claim owners; and, moreover, there is no doubt considerable quantities of alluvial gold are won, particulars of which it is impossible for the Registrars to trace with any degree of accuracy. The difference between their figures and the total yield, as computed in Sydney, may be in part explained by the gold which is sent out of the various districts in the form of copper matte and ore, concentrates, sulphides and other complex ores, for reduction at the large smelting works at Dapto and Cockle Creek.

DREDGING.

DREDGING.

During the year great activity has been shown in taking up large areas of our rivers and streams for dredging for gold and tin. The principal streams in which areas have been taken up are the Clarence and Macquarie, and from the nature of the surrounding country and the drifts, the applicants are sanguine of success. Indeed, so far as operations have gone with the dredges at present at work, the returns have been most satisfactory, and are such as to inspire the owners with the hope that these undertakings will prove highly remunerative. Investors have by no means confined their ventures to the rivers mentioned, applications having been made for leases of river-beds of the Shoalhaven and Clyde, the Tumut, the Snowy and its tributaries, the Turon, Little River, &c. It is quite possible that the expectations of some who have embarked capital will not be fully realised, for it must be remembered that the industry is entirely new in this Colony, and the result of the operations alone can show which are the localities that will prove most practicable and profitable to work. Experience in all new ventures must be bought; it cannot be anticipated.

In the other Colonies where dredging has been entered upon it has been confined to gold, but in this Colony many areas have been leased for the purpose of exploiting the tin deposits known to exist, but which have hitherto been unworkable owing either to the depth or to the extreme wetness of the ground.

During the last few weeks of last year a Gold and Mineral Dredging Bill was passed through Parliament, and investors now have much more heart to embark in the industry, seeing that they are guaranteed a secure title to the land. Until this measure was passed the progress of the industry was much hampered. By the new Act the rights of owners of frontages are conserved as far as possible, while at the same time the dredge owners get facilities for carrying on their work to the best advantage; and as the power is retained of either refusing leases or of granting them, subject to whatever conditions may be deemed necessary, it will be understood that the fear which was at one time felt that injury would be done to vested and other interests no longer remains.

The construction of dredges is now being pushed vigorously ahead, and a few months should see a large number floated and at work operating upon our auriferous sands and drifts. Investors have profited by the experience of other places, and dredges of most up-to-date design are being constructed and equipped in such a thorough manner as to be capable of handling, with facility and economy, enormous quantities of mineral-bearing material. Capital is being freely invested, and the industry is creating a new life in some of the old mining fields.

One notable feature of the dredging is that the operations will not in many cases be carried on in new ground, for the system is being introduced to turn over alluvial flats which have been worked over and over again by individual miners till there is apparently not even "tucker" left in them, but which, under the manipulation of the dredges, are expected to return a fair profit on the process.

The industry is one that should be encouraged, because it not only adds to the material wealth by the increased gold yield, but affords a large amount of remunerative employment, not only to those engaged in operating the dredges, but also to mechanics and others engaged in manufacturing and repairing the machinery. Indeed, the impetus to outside trades cannot at present be very well estimated, for while the present dredgemakers are understood to be more than fully employed, there is no doubt that other manufactories will be established in order to cope with the demand for machinery of this kind.

It is asserted that with a modern and efficient dredge a grain or a grain and a half of gold per cubic yard of material raised will give a profit to the owners. There are, it can be confidently stated, enormous areas in our rivers and watercourses, and the terraces and flats adjacent thereto, which would readily yield such a quantity of gold as that stated, and there is every reason for predicting that the success which has attended this method of gold-winning elsewhere will be repeated in this Colony.

COMPARATIVE Statement of Average Yields from Alluvial Mines for 1898-99, and for the Ten Years, 1890-99.

NOTE.—The above Table only shows the yield of gold where the quantity of stone treated is available.

For reasons that have been so frequently reiterated as to have become monotonous, no claim to anything like completeness can be made for either of the two preceding tables. The second of the two is perhaps the more complete, as it is an easier matter to keep record of the stone crushed than of the quantity of wash-dirt treated from an alluvial claim. Although there are numerous notable and worthy exceptions, there are, unfortunately, on the other hand, many mine and battery owners—ready enough to avail themselves of information published by the Department—who seem to labour under a mistaken idea that, were they to assist the Department by furnishing, in return, such particulars as are requisite for statistical purposes, the prospects of their properties would, in some mysterious manner, be injured by their so doing; and, until a broader-minded view obtains, there seems little hope of rendering the above tables more perfect, and, consequently, more useful. To compensate, as far as possible, for the lack of completeness in the information available for any one year, a new feature has now been introduced into these tables by showing the results ascertained over a term of ten years, and by which means it is thought to more closely approximate the average yields of the various districts.

The number of miners employed in gold-mining during the year was as follows :—

							1898.	1899.
Alluvial	...	...	...	...	...	...	7,439	7,219
„ (Chinese)	...	...	...	...	...	..	864	811
Quartz	..	...	...	...	...	...	11,616	11,318
							19,919	19,348

These figures show a decrease in the number employed, both in the alluvial and quartz-reefing branches of the gold-mining industry, during the past year, as compared with those so occupied in 1898. Apart, however, from other factors which may have contributed to this result, the shrinkage in the number of alluvial gold-miners is more than accounted for by the larger increase of alluvial tin-miners, occasioned by the sharp and maintained rise in the price of tin; and, similarly, the increased number of men engaged during the past year in the copper-mining industry, owing to the enhanced value of that commodity, more than counter-balances the reduction which took place in the number of those engaged in quartz-reefing.

Taking, in accordance with previous custom, the total output of gold for the year, viz., 496,196 oz., and dividing this by the number of men employed, the average win per man thus arrived at would be represented by 25·646 oz., valued at about £93 3s. 2d. This mode of estimating the earnings per head is admittedly crude, and does not take into consideration the expenses incidental to mining; but lack of complete information renders any other method impracticable.

If,

If, instead of the total output, as above taken, we adopt, as a basis of similar calculation, the yield obtained from the Mining Registrars' returns, viz., 278,417 oz., the figures thus arrived at as the average winning per man would be 14·39 oz., estimated to value about £52 5s. 5d., and this would be somewhat below the average of the previous twenty years. In any case, it must also be borne in mind that many of our gold-miners follow other pursuits during portion of the year, such as shearing, fencing, well-sinking, &c.

COAL.

During the past two years the outputs of coal from New South Wales were as follows :—

In 1898—		£	
Intercolonial exports .....	1,629,072 tons, valued at	551,083	
Foreign exports .....	1,162,724 „ „	411,585	
Home consumption .....	1,914,455 „ „	309,165	
Totals .....	4,706,251 „ „	1,271,833	
In 1899—		£	
Intercolonial exports.....	1,624,137 tons, valued at	553,629	
Foreign exports .....	1,174,386 „ „	452,165	
Home consumption .....	1,798,505 „ „	320,005	
Totals .....	4,597,028 „ „	1,325,799	

The above figures exhibit a slight decrease in the total output of coal for intercolonial export and home consumption during the past year, as compared with that for 1898—which was a record one—but, as they also show a still expanding foreign export trade, and a substantial all-round advance in value which seems likely to be maintained during the coming year (1900), the present condition of this important industry must be regarded as satisfactory and its immediate prospects encouraging.

Steady progress has been made by the Sydney Harbour Collieries Company, with the sinking and walling of their “ Birthday ” shaft, at Balmain. By the end of the year a total depth of 1,552 feet had been sunk—which is rather more than half the depth at which it is expected coal will be reached—and the shaft had been permanently walled for a distance of 1,541 feet.

At the 31st December, 1899, there were 89 coal and 4 shale mines under inspection, which is a decrease of 2 coal-mines as compared with 1898. The number of shale-mines at work was the same as in the preceding year.

QUANTITY and Value of Coal raised from the opening of the Coal-seams to 1857, inclusive.

There were 10,523 men and boys employed in and about the New South Wales Coal and Shale mines during 1899, as compared with 10,519 during 1898.

The total number of separate fatal accidents which occurred during the past twelve months was 10, and resulted in 10 deaths ; as compared with 9 separate fatal accidents, resulting in 25 deaths, during the previous year.

The total number of separate non-fatal accidents was 152, and resulted in more or less serious injury to 154 persons ; as compared with 107 separate non-fatal accidents, resulting in similar injury to 113 persons, during 1898.

SHALE.

Shale-mining during the past year was again confined to Hartley, New Hartley (Capertee), Joadja, and Genowlan; and gave employment to 184 men only, as compared with 261 men in 1898. The industry has been somewhat handicapped by the high rates of freight which have been ruling; but, nevertheless, 36,719 tons of shale, valued at £40,823 5s., were produced during 1899, as compared with 29,689 tons, valued at £31,834, produced during the previous year.

The quantity and value of the shale wrought in the two districts from which it was produced were as follows:—

	Tons.	Value.	Average Value per Ton.
		£ s. d.	£ s. d.
Western District .....	29,193	31,415 5 0	1 1 6·27
South-western District .....	7,526	9,408 0 0	1 5 0·02

The following table shows the quantity and value of Kerosene Shale produced during the years 1865 to 1899:—

SILVER AND LEAD.

During 1899, as in former years, the great bulk of the silver and lead produced in the Colony was won from the mines at Broken Hill, where matters in connection with this important industry were never in a brisker condition than they are at present. This happy result may fairly be credited to the plucky perseverance with which, during the last five or six years, and in the face of many grave difficulties, some of the larger Companies operating there grappled with the one-time vexatious problem concerning a successful method of treatment for their low-grade sulphide ores. Now that this difficulty has been practically solved, the results of their enterprise are making themselves manifest; and we may confidently look forward to a steadily increasing output from the almost inexhaustible stores of mineral wealth contained in this widely celebrated region.

Quantity and value of Lead (pig), the product of the Colony, exported from New South Wales up to the end of 1899:—

Year.	Quantity.	Value.	Year.	Quantity	Value.

NOTE.—The bulk of the silver produced in New South Wales is exported in the form of silver-lead and ore. \* For details see Summary on page 81.

The foregoing table of course refers to silver, silver-lead, and ore produced in all parts of the Colony, and, therefore, includes the production of other silver-mining centres as well as that of the Barrier field; but, as already stated, by far the largest bulk of these metals is the yield of the Broken Hill district. In the latter part of 1897 the Broken Hill Proprietary Co. shut down their smelters at Broken Hill, and in the early part of 1898 started operations at the new smelting works they had erected at Port Pirie, South Australia. The basis on which the values shown in the above table, have always been calculated in the past, has been the net export values, as near as could be ascertained, of all the silver, silver-lead, ore, &c., exported from the Colony; but the transfer of smelting operations from Broken Hill to South Australia has caused an increase in the export of crude ore and concentrates, and a decrease in the export of refined metals, bullion, &c. As it is patent that the metal contents of a given quantity of ore possess a higher net commercial value than the crude ores, &c., in which they were originally contained, the result has been a decrease in the net export values of our silver and lead products, as compared with what they would have shown had smelting and refining operations continued at Broken Hill as formerly; and relative, also, to the actual amount of mining work performed there. These figures should not, therefore, be interpreted as representing the true productiveness of our great Silver-field; and though, owing to the fuller particulars in connection with it published under its proper heading, no excuse for such an assumption is provided, it is nevertheless thought advisable to draw particular attention to this point here.

It has been suggested in some quarters that the Department should, in future, adopt *gross* instead of *net* values, but for statistical purposes this is not thought to be desirable, nor—though naturally anxious to credit our mineral products with their full value—is it considered that such a course would be any more legitimate than, say, taking the product of our diamond-mining industry at the full value of the gems cut and ready for the market—the increased difference in value, in both cases, being the result of additional labour bestowed on the crude article outside the confines of the Colony.

The information in the following notes relating to the silver-mining industry is gathered from reports received from the Wardens and Mining Registrars:—

ALBERT MINING DISTRICT.

*Broken Hill Division.*

The past year has been one of progress. So far as the Proprietary Mines are concerned the developments have been most satisfactory, and with the increased value of the products it has also been one of prosperity; an increased number of miners are employed, and work could be found for many more hard-ground men.

Since the removal of the smelters the health of the town has materially improved, and generally there appears to be a better feeling between employers and employees than formerly existed. This is due to the invariable consideration and kindness of the present General Manager.

The Proprietary New Mill is nearing completion. Work has for some time past been carried on in part of the building; and when wholly complete, work will be available for an increased number of experienced miners and surface hands.

The Australian Metal Company's zinc-works are now employing 175 men. The process appears successful so far, and the engagement of an increased number of hands is anticipated.

The

THE BROKEN HILL PROPRIETARY "BLOCK 10" SILVER MINE. (1887.)

THE BROKEN HILL PROPRIETARY "BLOCK 10" SILVER MINE.  
(Recent.)

*Tingha Division.*

At Bora Creek the Conrad Silver and Lead Mining Company have upwards of 170 men employed. There are also other silver-lead properties being opened up in this locality—the Bora Extended, the King Conrad, and the Pluto—and it is believed the district has a big future before it. The Conrad, which is the principal mine of the group, has its main shaft down 100 feet, from which level a quantity of high-grade ore has been raised. The company has decided to continue its shaft a further depth of 200 feet, and to erect smelters. During the past year about 5,454 tons of ore have been raised on this field, the average contents of which by assay are stated to be 136 oz. of silver per ton and 55 per cent. of lead. The value of machinery employed has been greatly increased, and development work is being steadily progressed with.

## NEW ENGLAND MINING DISTRICT.

*Drake (late Fairfield) Division.*

On the Sawpit Gully Gold and Silver Mining Co.'s property, situated about 2 miles north of Drake, there is a large deposit of auriferous and argentiferous material which has been worked with varying results for some years past. During the past year experimenting as to the best method of its treatment has been continued, and the results arrived at have been considered to warrant the erection of plant selected as the most suitable for the purpose. It is thought there can hardly be any doubt that this will now prove a profitable venture, and if so, it will give employment to a number of men. Fuller reference to this property will be found elsewhere, under the heading of GOLD.

At Ti-tree Creek, distant about 4 miles south of Drake, Messrs. Kelly Brothers have discovered what promises to be a valuable silver deposit. The mine is known as the "Baden-Powell" Silver-mine, and the land is held as a mineral lease of 40 acres. There are two distinct lodes traversing this property, bearing north-east by south-west.

No. 1 lode is 25 feet wide and consists of carbonate of lead, silver glance, and chloride of silver. 7 tons 3 cwt. of ore taken from this lode, and treated at the works of the Sulphide Corporation at Cockle Creek, gave a return of 46 oz. of silver and 5 dwt. of gold per ton. The value of the ore was £6 3s. 6d. per ton. A parcel of 7 tons 17 cwt. from No. 2 lode—which is parallel to No. 1, and about 1 chain distant—treated at the same works, yielded 37 oz. of silver and 2 dwt. 5 gr. of gold, bringing the value up to £4 11s. 5d. per ton.

The work on this mine consists of open cuttings on the surface, and is more of an exploratory nature than otherwise. Its future prosperity will depend on the result of developments which are now about to be undertaken. The prospects are very encouraging, and from surface indications there is every promise of the claim proving payable.

*Emmaville Division.*

The yield of silver for this Division for the past year is considerably below that of 1898, and in the absence of reduction works closer to the field than Cockle Creek, it is possible that the yield will continue to decrease; because it is only the very richest ore that will stand being picked, bagged, and sent such a long and expensive journey, and then return a profit.

Webb's Silver-mine, situated about 9 miles westward of Emmaville, is at present the only developed and permanent mine in the Division. Its main shaft is now down 650 feet, at which depth the lode is about 5 feet, and showing good ore; but, notwithstanding great alterations in and additions to the plant and machinery, a large quantity of silver concentrates were sent away from this mine during the year—approximately, 700 tons. The greater part of the machinery that was erected at the White Rock Mine, at Drake, was, during the year, moved to Webb's Silver-mine, at Emmaville; and when its re-erection is quite complete this mine will have a valuable plant available for use, and should employ a great number of hands. At present the muster-roll numbers eighty men and boys. The owners of this mine purchased and took up a large area at Webb's Consols, and intend, it is stated, developing it early in the coming year. Trial crushings and assays from this place point to its ultimately outrivalling Webb's Mine.

*Tenterfield Division.*

In the early part of the year, Messrs. Baker and Conlon did a little prospecting in their silver claim at Basket Swamp, but no development work was undertaken. The mine is now closed down, and the plant sold.

*Wilson's Downfall Division.*

Owing to the absence of any local reduction works, the silver claims at Rivertree are not getting on too well. The great cost of sending the ore away for reduction is proving too much, except for the very richest stone, and there is a decrease in the output for the year. It is feared this falling off will continue unless greater facilities become available, and some of the miners have already left the district. Still, there are six small parties at work who are making fair wages, and fossickers for ore are picking over the tips at the old abandoned mines. The picked ore is bagged and sent to Aldershot, Queensland, and to Cockle Creek, New South Wales, for treatment. From the expense of carriage and treatment, all the lower grade ore, averaging from 20 to 40 oz., is rejected and thrown over the tips. The principal mines on Rivertree are Mr. C. T. McDonald's and Messrs. Hendry and Lear's. Mr. McDonald is sinking a shaft on the lode, and is now down 150 feet. He has also put in two drives, one of which is in 340 feet and the other 200 feet. The lode averages 4 to 6 feet in width, and the picked ore sent away to Cockle Creek for smelting, returns 179 oz. of silver per ton.

At the Amalgamated Claim, Messrs. Hendry and Lear have sunk a shaft 60 feet on the lode, and have driven north and south 200 feet. As in the other mines, the ore is picked and gives a return from Cockle Creek of 100 oz. per ton. Their lode is from 3 to 5 feet in width and is improving generally.

Mr. Thomas Lewis has been prospecting on portion No. 15, assisted by Government aid. He has driven a distance of 44 feet on the lode, which is situated in a precipitous range, and from this drive 8 cwt. of picked ore, sent to Cockle Creek, gave a return of 44 oz. of silver per ton; but the vein, being small, has been abandoned.

During the year two mineral leases have been applied for on this field, both of which are now being worked.

## COBAR MINING DISTRICT.

*Cobar Division.*

The bulk of the silver won in this Division is produced from the gold-mines at The Peaks, where it is associated with the more precious metal. These mines having been idle during the greater part of the year, the silver output of the Division for the past twelve months is represented by 68,855 oz. only, as against 170,704 oz. produced in 1898. This decrease will no doubt be compensated for, however, when more favourable circumstances enable these mines once more to resume full work.

*Bobadah Division.*

There is in this Division only one mine in actual work, viz., the Overflow Silver-mine, which, for about six months during the past year, has been extracting gold by means of a cyanide plant. This mine also carries copper, lead, and silver. A small quantity of silver has been saved, but no particulars as to the amount are available, as the gold and silver has been sent from here in the form of bullion. There are five other shows in the locality being prospected, but so far no crushing from any of them has taken place, nor has any machinery been erected—the holders evidently waiting to see whether operations at the Overflow Mine can be made profitable.

No new discoveries or developments have been made within this Division during the year, owing, in part probably, to the absence of water during its first half and the very small and uncertain supply available during the latter half; in fact, the supply of water at the Overflow Mine is now (at the close of the year) exhausted, and operations must again be suspended until a heavy fall of rain occurs in the district.

COPPER.

During the past year the notable advance which occurred in the price of copper, and its maintained position on the market, gave considerable impetus to our copper-mining industry, in which 2,369 miners were employed, as compared with 1,976 so occupied in 1898. The value of the copper output, the direct product of the Colony, for the past twelve months was £118,927 in excess of the amount shown for the previous year ; but, for the purpose of fair comparison, it should be stated that the basis on which this output has been calculated in former years included the quantity of metal refined in New South Wales from imported ores ; whereas an estimated equivalent to the quantity and value of copper produced in this Colony, during the year, from ores and matte imported for treatment from other Australian Colonies and from New Caledonia has been deducted from the similarly obtained figures for 1899. Had not this deduction been made, an output valued at £469,114 would have been shown, as compared with £280,887 for the previous year.

TABLE showing the quantity and value of Copper exported from New South Wales, from 1858 to 1899.

Year.	Ingots.		Ore and Regulus.		Total Value.
	Quantity.	Value.	Quantity.	Value.	
	tons cwt.	£	tons cwt.	£	£

Includes copper refined in New South Wales, from imported ores, to the end of 1898.

The following notes relating to the copper-mining industry in the various divisions of the Colony may prove of interest :—

BATHURST MINING DISTRICT.

Cowra Division.

At Broula there is a silver and copper show which, locally, is highly spoken of. Little or nothing, however, has been done there during the year and it is at present unworked.

Mount M'Donald Division.

The old Milburn Creek Copper Mine is about to be formed into a company and opened afresh. About twenty men have been employed for some time past cleaning out the old workings preparatory to further developing ; and, judging from the ore showing in this apparently rich property, it seems to have an excellent future in store. The principal shareholders are Victorians.

Blayney Division.

A general opinion exists among experienced miners in this Division, that in and around the vicinity of Blayney there is an abundance of copper, and that if this mineral were included in the provisions of the Mining on Private Property Act a large number of applications for authorities to enter would be lodged—the land near Blayney being nearly all freehold or leasehold.

The

SMELTING WORKS, GIRILAMBONE COPPER MINE.

The principal mining property in the Division is that of the Blayney Mining and Smelting Co. (Ltd.), which, during the year has raised a large quantity of ore, estimated to contain about 5 per cent of metal, and valued at about £30,000. Their plant includes water-jacket blast furnace, reverberatory furnaces, and refiner. Since August last, as many as 280 men have been employed. Towards the end of the year, however, this number had been reduced to 80, pending some necessary arrangements; but the management expected to be employing fully 300 men within a few months time.

*Tuena Division.*

At the Costigan and Cordillera Copper Mines, in this Division, nothing has been done for a long time past.

*Burrage Division.*

As elsewhere stated, the principal mining done in this Division is for copper. The Burrage Copper Mine, which is the chief one in the district, was purchased about the middle of the year by an English Company for the sum of £100,000. Since this new company has taken over the mine, very great improvements have been effected in every direction, whilst the rate of output has at the same time been considerably increased. The furnaces have been thoroughly overhauled and repaired, and at the close of the year four out of five were being kept in full blast, while the fifth was expected to be started at an early date. Preparations for the erection of water-jackets and additional machinery have been going on vigorously. A large dam has been constructed for the conservation of water, for the use of the water-jackets; several of which will soon be ready for work. A large amount of surface work has also been done making and mending roads, erecting buildings, excavating foundations for machinery sites, &c., and about half a million bricks are being made on the spot. A double line has been put into the mine, and when everything is completed the output of ore will be double what it is at present. It is intended to put boring-machines into the mine, the lode in which looks very well, and at present averages about 8 feet in width. During the year 10,256 tons of ore were treated, the value of the matte produced being £36,400. Some 300 men are employed, and, generally, the operations of the new proprietary have lent considerable impetus to the adjoining township.

Stain, Cassell, and party, who have, under aid from the Prospecting Vote, been sinking an underlay shaft on a 40-acre lease about 2 miles south-east of the Burrage Mine, have a very good show. They are down 250 feet on the underlay, and have a big lode carrying strings of yellow ore.

About 1½ mile south of Burrage Mine, McKenny, Hall, and party are also sinking under aid from the Vote. They are down 95 feet, and get very good prospects of yellow ore. The country in which they are working is very hard, and progress is in consequence slow.

Bowie, Prosser, and party are sinking a prospecting shaft at Thompson's Creek, about 2 miles north of the Burrage Mine. They are down about 70 feet, but, so far, have struck no ore. They expect to strike the lode at about 100 feet.

Carey and party are prospecting on their copper lease about a quarter of a mile east of Burrage township, but they have struck nothing of any importance as yet.

Altogether, the future prospects of this district are very promising.

*Rockley Division.*

This district also appears to be rich in copper. The Cow Flat Mine, which has been idle for many years, is being again worked. Jamieson's Pinnacle Mine is also in working order, and the ore raised is being treated at Lithgow.

*Oberon Division.*

Bouchier and Sons have during the year raised 90 tons of copper ore, valued at £400, from their mine at Tuglow. The property is under offer to an English syndicate, and is expected to change hands before long. The prospects of the mine are said to be uncommonly good.

*Bathurst Division.*

In this Division there was some slight revival during the year in prospecting operations for copper, and some forty men were at one time employed prospecting at Mt. Morris, Apsley, and Green Swamp. But, unfortunately, as any lodes found were either not extensive or the grade of ore was not sufficiently high to warrant working, prospecting in this direction has now almost entirely ceased.

*O'Connell Division.*

Messrs. Gannon, Rea, and Foley, who hold a mineral lease of 40 acres at Wiseman's Creek, have continued their old shaft to about 180 feet in depth. They have also sunk a new shaft to 80 feet, and driven 50 feet. A large dam has been erected on the lease, and there is about 1,000 tons of copper ore at grass. Four men are employed at the mine.

Two men have been employed on another mineral lease in the same vicinity, held by Messrs. Wiley, Wilson, and Hunter. The shaft is down 100 feet, and new drives have been put in from the old tunnel. Two new lodes have been discovered, one 17 feet and the other about 7 feet wide, and both looking well. About 100 tons of copper ore has been raised, but none has yet been treated. A water-jacket is now in course of erection.

*Orange Division.*

From the North Carangara Gold and Copper Mining Co. no information was obtainable as to the work performed on their property at Byng. Little, if any, however, can have been done during the past year, and presumably the prospects obtained have not come up to expectations; otherwise, with the present value of copper, this mine should be in full work.

*Molong Division.*

At Copper Hill, near Molong, Mr. J. Williams has sunk 100 feet under a grant from the Prospecting Board, and is now about to drive 100 feet.

Mr. Delaney, at Gumble, has sunk 55 feet, also under a grant. In neither case has anything as yet been struck.

MUDGEE MINING DISTRICT.

*Leadville Division.*

The Mount Stewart Mine is still being prospected for copper. The shaft has now been sunk to a depth of 225 feet, at which level the lode is being driven along, but with what result is not known. Eleven men are employed.

*Wellington Division.*

No information is available as to the work done during the year at the Old Belara Copper Mine, which is situated about 25 miles distant from the Wellington Railway Station. It is believed, however, that the yield, if any, was inappreciable.

LACHLAN MINING DISTRICT.

*Forbes Division.*

Some 18 miles from Forbes, near Eurow, a small syndicate are at present prospecting a copper show, but, so far, their efforts have not met with success.

The only copper-mining done in this Division has been of a purely prospecting character, nothing of a proved payable nature having yet been discovered; although small bunches of highly mineralised ore have been occasionally won.

*Fifield Division.*

Towards the end of last year (1898), a copper lode was discovered at the Albert Water-holes, between Dandaloo and Fifield. The "Christmas Gift," as one claim has been named, is stated as likely to turn out a valuable mine. Thirty tons of ore from this property, treated at Dapto, returned 32 per cent. of copper, and showed traces of gold and of silver. This claim is reported to have been purchased recently by a company, and is expected to be at once worked on a large scale should

should developments justify. Adjoining this, another copper show—the “Elizabeth”—is also at work, and promises well. From this, 14 tons of ore was sent to Dapto for treatment, and a return was made of over 26 per cent. of copper. The Shaft of this mine, which was first discovered in February, 1899, is now down 65 feet. Four leases have been taken up in this locality during the year.

At Orange Plains several leases have been taken up for copper mining, and the prospects obtained are said to be good. It will probably be some time, however, before the value of these mines can be determined. They are situated in a remote part of the district, within a few miles of Dandaloo, and it is difficult to obtain information about them.

#### *Condobolin Division.*

A copper lode is being worked about 3 miles north of Condobolin by Smith and party, who sent 21 tons of ore to Dapto, and got a gross return of £241. This mine is known as the “Sultan,” and the owners are very sanguine, and intend making arrangements to extend their operations. At Melrose the “Big Ben” and “Anaconda” copper mines are idle. A considerable amount of money has been spent on these two properties, and it is intended to try and float them upon the English market. At Mount Tinda, where prospecting for copper has been going on for some length of time, two 40-acre mineral leases have recently been taken up by a syndicate.

### TUMUT AND ADELONG MINING DISTRICT.

#### *Cooma Division.*

At Middle Flat, near Cooma, Skidmore and party are still pushing on prospecting work with, it is said, satisfactory results. The lode is stated to present a good appearance, and the ore to assay an average of about 9 per cent. of copper. This party has been in receipt of Government aid from the Prospecting Vote.

#### *Kiandra Division.*

A party of working miners have a mineral lease at Lobb's Hole, where they are working a small copper lode, which averages about 27 per cent. of metal. In spite of the fact that the ore has to be packed out for a distance of at least 3 miles, and then conveyed about 62 miles by team, they are earning from £5 to £6 per week per man. The party consists of three men, and they employ other three men.

#### *Captain's Flat Division.*

During the year just ended, productive mining in this Division was, as usual, confined to the Lake George Mines (Limited). The smelting plant was in operation from January until the end of September, during which period 46,821·37 tons of ore were raised and treated, the gross value of contents being £63,298 ls. 4d., including the value of precipitates from water pumped from Keating's Shaft, Southern Section. At the end of September, owing to the sulphide ores having fallen to a very low grade, and the fact that the lode in the lower levels carried a large percentage of zinc, the management decided to discontinue smelting operations, and to proceed with the erection of a large cyanide plant for the treatment of the auriferous gossan ore in the Northern and Southern Sections, an experimental plant having shown very satisfactory results.

The erection of the new plant was pushed on most vigorously, with the result that at the end of the year it was completed, with the exception of a few minor details; and a portion of the plant is now in operation.

During the year the Company devoted a considerable amount of attention to prospecting; more particularly so, on what is known as the Copper Creek Lease, situated to the west of the old workings, where a shaft has been sunk to a depth of 200 feet, small veins of high-grade copper ore having been cut during the sinking. Progress, however, has been retarded by the large inflow of water, which necessitated the erection of powerful pumping machinery. Operations in this Section are watched with great interest, as the striking of a rich copper lode should lead to the resumption of smelting operations.

The work done outside the Lake George Mines has been merely prospecting. Messrs. Cooper and Coffey have had four men employed continuously on their prospecting area known as the Federal, which is situated about  $\frac{3}{4}$  mile east from the Lake George Mines.

At the Lake George North six men have been engaged in prospecting during the greater part of the year. A prospecting syndicate also employed four men for the past three months to the north of the township, where a vein of rich copper ore was discovered on the surface.

### SOUTHERN MINING DISTRICT.

#### *Braidwood Division.*

Early in the year arrangements were made by a local syndicate to reopen the old Mulloon Copper Mine, situated in this Division, between Braidwood and Tarago. The shaft was cleaned out and repaired, and 90 tons of ore raised and sent to Dapto for treatment realised a gross return of £620. The ore occurs in veins varying in width from a few inches to about 3 feet, and the principal metals contained are copper and gold, silver, lead, and zinc are also present, but not in payable quantities.

#### *Nelligen Division.*

Mr. W. Backhouse is still prospecting a copper lode on his mineral prospecting area, but with indifferent success, and no ore has been raised.

#### *Goulburn Division.*

During the years one mineral lease for copper was applied for, and 70 tons of copper-ore, valued at £150, were produced in this Division.

#### *Frogmore Division.*

It is stated that the old Frogmore Copper Mine, situated some 18 miles northward from Burrowa, which has been a good deal worked at different times, but which for a considerable period has lain idle, has been floated on the London market, and will in all probability be re-opened and extensively worked in the near future. It is thought that smelting works started there would lead to the working of a number of small copper lodes in the neighbourhood.

Not far from the old mine, A. A. MacInnes and party have been doing some work on a 5-acre lease, held under private agreement. During the year 8 tons 16 cwt. of ore was sent by them to the Dapto Smelting Works for treatment, and yielded about 1·36 tons of copper and 2 oz. of gold.

#### *Yass Division.*

Negotiations have been pending for again working the Wallah Wallah Copper Mine, which yielded rich mineral in the early fifties, but has been since lying idle. This property is situated near Rye Park, some 20 miles from Yass; and it is reputed that many years ago ore from this mine was, with profitable results, carted to Sydney, and sent on to be smelted at Newcastle.

### HUNTER AND MACLEAY MINING DISTRICT.

#### *Kempsey Division.*

At the Willi Willi Copper and Silver Mine no work other than that of prospecting has been done during the past year. Messrs. Baker Bros., who are now the owners of the mine, report that they have about 600 tons of ore at grass ready for smelting. The ore is composed of carbonates of copper, with silver chlorides present. It is thought this property may ultimately prove a valuable one.

### PEEL AND URALLA MINING DISTRICT.

#### *Hillgrove Division.*

The Chandler River Copper Company, formed in Sydney, has secured a property about 23 miles from Hillgrove, on terms, from Messrs. Keys Brothers, to prospect and develop. Tunnelling and cross-cutting for a considerable distance has been done, in the endeavour to find an alleged lode. Another tunnel has been driven on to a small reef. A trial of 5 tons of this stone gave

THE NYMAGEE" COPPER MINE AND SMELTING WORKS NYMAGEE N.S.W.

gave satisfactory results, something like 35 per cent.; but latterly the prospects of this reef have been disappointing and work there has been abandoned. Two other leases, not adjoining, but adjacent to the property, have been acquired and tunnelling is now being carried on. In these leases is a well defined copper lode. An average of 14 men were employed during the year, but as yet, no machinery has been placed on the property. About 20 tons of ore are at grass, 1,500 feet sheer from the top of the falls, and if prospects warrant it, an aerial tram will be erected to convey the ore to the surface. No returns have been received from this Company, of which Mr. T. Snow is the local manager.

#### *Tamworth Division.*

Copper is now found in this Division from Trough Gully to Fisher's, Dungowan, thence to Wright's, Woolomin; running in a line north and south for a distance of about 6 miles direct. Fisher's is the only mine from which a return of the ore treated has been furnished; and from this property 16 tons 15 cwt. of ore realised £194 6s. Although the ore was sent to Dapto for treatment, it is so easily obtained that a substantial profit resulted. Hanson and party, at Trough Gully, have recently forwarded a parcel of 5 tons of ore to the smelting works at Cockle Creek; and judging from its appearance the result, which is not yet known, should turn out satisfactory.

#### *Barraba Division.*

There has been considerable activity in copper mining in this Division during the past year. The property at Gulf Creek, owned by the Mining and Financial Trust Syndicate (Limited) and lately known as the Cornish Mine, has been thoroughly worked throughout the year; and 80 men are employed in and about the mine. A water jacket smelting furnace has been erected, and a large quantity of matte has been produced therefrom and forwarded to Newcastle. At one time it was thought that the ore would last for two years only, but as some rich lodes have been discovered, the field will probably last for a long time to come. It is stated to be the intention of the proprietary to erect a calciner, and thus produce a higher grade of matte. Operations are considerably handicapped by the nearest railway station being 50 miles distant.

During the year ended 2,000 tons of copper ore have been raised, averaging by assay 10 per cent. of metal and valued at £14,000. The main shaft is down 148 feet, at which depth the lode is 6 feet in width. There is a very large dam on the property, which has practically an inexhaustible supply of water. The present plant is valued at £4,000.

Mr. Peter Woodbery has opened up a copper mine near Woods' Reef. The shaft is 54 feet deep, and underlays in a westerly direction. About 20 tons of ore have been raised, but not smelted; and are estimated to represent a total value of about £140.

Another new copper find has been made by Victor Salter & Co., at Spring Creek. Good surface specimens were met with, and the mine may become a payable property when further developed; but no work of any importance has yet been done on it.

#### *Bingara Division.*

Some 70 tons of copper ore were raised in this Division during the past year. About 20 tons of this were raised by McCombe and Thompson, at Bobby Whitlow, and the balance was obtained from the Bingara Mining Syndicate's property at Top Bingara.

### NEW ENGLAND MINING DISTRICT.

#### *Drake Division.*

The yield of copper is largely in excess of the amount won last year, being 479 tons, valued at £3,528 5s., as against 17 tons for 1898. It all came from Drake, where several of the mines originally worked successfully for gold are now turning out gold and copper; but the ore has all to be sent away to Cockle Creek or elsewhere for treatment, necessitating careful picking of the ore to cover the heavy expense of carriage. The principal properties producing copper are the Pioneer Company on G.L. 6, Stanton and Co.'s mine, and the Rainbow.

Stanton and Co.'s mine at Sawpit Gully is a mineral lease worked for copper alone, and from which 85 tons of ore raised during the year realised £1,250. The Rainbow mine is owned by Parker and O'Connor, who are working at a depth of 120 feet on a lode 18 inches wide, and carrying rich copper ore, 82 tons of which have been sold to the Sulphide Corporation at Cockle Creek for £810. The Lady Mary, G.L. 72, is also being worked as a copper mine; one parcel of ore, containing 8 tons, was sent to Cockle Creek, and realised £126 12s. 10d. It is reported that the old Adeline Mine is likewise now going to be thoroughly worked for copper and gold. If so, there is every prospect of the copper yield for 1900 being again largely in excess of the return for this year.

#### *Tenterfield Division.*

During the year a discovery of copper was reported to have been made about 4 miles from the Bolivia homestead, but upon inspection it was found to be valueless.

### COBAR MINING DISTRICT.

#### *Cobar Division.*

The leading mine in this Division is, of course, the Great Cobar Copper Mine, which is said to be the greatest copper mine in Australia, if not in the world. It is still being worked by the Syndicate, on tribute, under the able management of Mr. Thomas Longworth and a competent staff. During the past year the plant has been increased and more labour employed. It has been the most prosperous year the mine has experienced since its inception, and its prosperity is likely to continue. The increased value of copper has been a boon to the proprietary, as, in a large going concern such as this, the increase in the price of copper means quite £50,000 a year. The plant is a most complete and extensive one, including five water jackets, each of 60 tons capacity, and the whole mine is lit with electricity. Although essentially a copper mine, a considerable quantity of gold is also won from this property in connection with its copper output.

The Chesney Copper Mine adjoins the "Fort Bourke," and is worked for both copper and gold. Like the "Fort Bourke," during the past year, there has not been much developing work done; but a considerable amount of money and labour has been expended in machinery and plant, which has been erected under the management of Mr. Henry Roberts. This mine has always been more or less disappointing to the shareholders, but is nevertheless believed to be a good sound property, which, in the future, with the increased and improved plant, will show better results. For the following short description of the work and plant the Department is indebted to the present manager, Mr. Provis:—"The Cobar Chesney Copper and Gold Company's claim is due south from the property of the Cobar Gold-mines (Limited). The lode runs approximately north and south, with a slight dip eastward. So far as proved, it is very wide; ranging from 30 feet to 50 feet in width, and carrying copper ore right through from wall to wall. At the 260 foot level bunches of oxidised copper ore were met with in the gossan, and at the 360 foot level the oxidised copper ore had been replaced by yellow sulphides. At 460 feet the lode seems to have settled down to a 4 per cent copper ore, and will average this for the whole extent of the level so far as driven; though bunches of richer ore occur occasionally. At the 560 foot level the lode fully maintains its width and character, indeed if any change has occurred, it is slightly better for copper contents. The shaft is now 20 feet below the 560 foot level, and sinking will be resumed at an early date. The ore when won is taken through the shaft into a hopper, from whence it drops into the concentrating mill. It first passes through a rock breaker, then through rolls, and afterwards on to a trommell. All ore smaller than 4-inch in size passes through the trommell on to a Hancock jig, which separates the gangue from the ore. The jig treats on an average 33 tons of ore every eight hours. The concentrated ore averages 13 per cent. to 15 per cent. copper, and carries a little gold. The Hancock jig seems well suited for this class of ore, as it will handle large quantities expeditiously. The present plant will treat 100 tons of ore per day, and the order has been given to duplicate it, so as to make provision for treating 200 tons daily."

The year's copper product for this Division amounted to 3,794 tons, valued at £265,580, as compared with 3,514 tons, valued at £178,900, won during 1898.

#### *Nymagee Division.*

The principal mine in this Division is the Nymagee Copper Mine, which is owned by the Great Cobar Copper Mine Syndicate, and worked under the management of Mr. Vipond. Notwithstanding the serious drought which has prevailed throughout the year, this mine has been able to effect good work; and with fairly good results. With regard to water, this mine has been most fortunate, as though on several occasions during the year it has had to shut down, on each occasion within

within the course of a few days a thunderstorm has come along, bringing with it a sufficient rainfall to enable them to go on working; and the end of the year found their enormous dam full and overflowing, as a consequence of a storm of hail and rain which lasted twenty minutes. It is estimated that nearly two years' supply has thereby been stored.

A noteworthy feature in connection with the working of this mine is the employment of a traction engine, which conveys coke from the railway station at Hermidale, and returns loaded with copper. The engine carries about 18 tons, and travels at the average rate of  $3\frac{1}{2}$  miles an hour.

At the North Nymagee some fairly good developing work has been done during the year, and patches of good ore have been struck. The mine is the property of the North Nymagee Copper-mining Company (No-liability) and is worked under the management of Mr. Thomas Vellenoweth, J.P., to whom the Department is indebted for the following particulars:—"This property was worked some fifteen or sixteen years ago, and was known as the Hartwood Copper Mine. A good deal of prospecting work was done, both in sinking and cross-cutting. In what is now known as the No. 2 shaft a quantity of good carbonates was discovered at about 100 feet deep. At 140 feet a low-grade sulphide lode was met with, but very little work was done on it, and the mine was eventually closed down in consequence of the low price of copper. The present company was formed and commenced operations about two years ago, since which time a large amount of development has been done, such as sinking, cross-cutting, and driving on the various lodes. At present there are three parallel lodes opened up on the property. No. 1 shaft is 300 feet deep, and is situated on the middle or main lode, from which a quantity of good grey ore has lately been obtained. This lode has a western underlie. No. 2 shaft is sunk on the western lode, and is down 300 feet. This lode underlies to the east, and good sulphide ore is being obtained from it at 200 feet. No. 3 shaft is sunk on the eastern lode, and is down 140 feet. This lode also underlies to the east. The strike of the lodes is  $25^\circ$  west of north and east of south. The lodes, or ore bodies, in this district are not regular; the ore being principally found in chutes or pockets, and invariably associated with capel—a hard silicious slate."

About 15 miles from Nymagee is what is called the Wirlong Copper Mine, which is a new find, and in receipt of assistance from the Prospecting Vote. Some four or five leases have been taken up in the locality but, though some fairly good ore has been found, there has been nothing up to the end of the year to indicate a profitable mine or otherwise.

About 543 tons of copper, ingots and matte, of an estimated value of £35,125, were produced in this Division during the past year, as compared with 669 tons, valued at £12,196, won the previous year.

#### *Nyngan Division.*

The Girilambone Mine is situated about 2 miles from the township of the same name, and is the property of the Girilambone Copper-mining Company (No-liability). There has been a great deal of money spent on this property in labour and machinery, but it appears to be never in full work for any considerable period, being at work one month and closed down the next. Towards the end of the year they made a fresh start again and put on about 200 men, but no good results have yet been heard of. The Department is indebted to the manager, Mr. W. Blakemore, for the following particulars:—"The mine comprises an area of 1,600 acres of freehold property, situated at Girilambone, parish of Canbelego, and employs from 100 to 200 men, inclusive of miners, smelters, woodcarters, labourers, &c. The plant is valued at £20,000, and consists of one 50 h.-p. winding engine, one 20 h.-p. jiggling engine, one 12 h.-p. blowing engine, one 8 h.-p. dynamo engine, and two Worthington pumps, (all of which are under buildings), four large dams (from 10,000 to 15,000 cubic yards each), a complete jiggling plant (Hancock and May jiggers), with Krom rolls, Cornish rolls, and rock-breaker, one large Oxford blast furnace, one copper refinery, and five reducing and roasting furnaces, all covered in under substantial shed. The main shaft is 525 feet deep, and is opened out at 140 feet, 200 feet, 300 feet, and 360 feet, while commencement has also been made at the 440-ft. and 520-ft. levels. The width of lode varies from 50 to 200 feet, full width unknown, dips to the N.E., and strikes N.N.W. and S.S.E."

There are no other mines of any importance in this locality, but a good deal of prospecting work is being carried on. About 40 miles from Nyngan, on Mudall Run, two mineral leases have been taken up, and some prospecting has been done for copper, but nothing worth mentioning has been discovered.

In this Division some 2,520 tons of copper ore were raised during the past year. The ore has only been partly smelted, but its estimated assay value amounts to about £5,800.

#### *Mount Hope Division.*

The new Mount Hope Copper-mine continues to be worked on tribute by Burns, Evans, and Kendall, who took the tribute from the company in 1889. During the year 1,224 tons of crude ore, valued at £6,748, was raised from the mine. The output has been much restricted owing to an eleven weeks' idleness in the early part of the year, caused by extensive alterations to the machinery, during which active mining operations were suspended.

In July last the old system of dressing ores by "Cornish jiggers" was replaced by bringing into use the new concentrating machinery, which cost over £500, and is capable of treating 30 tons of ore per day. The method now adopted (Hancock's) has proved very successful, as it has made available for smelting purposes some thousands of tons of ore now on the surface, but which, worked on the old system, was considered unprofitable. By the aid of the new concentrators this ore can now be raised from 4 per cent. to 16 per cent. at very little increased cost. One reducing furnace and a refinery is being worked, but it is in contemplation to start another reducing furnace; when this is done the output will be much increased.

The Great Central Copper Mine also continues to be worked on tribute, by Jones, Davis, and Morris. During the year 950 tons of ore, valued at £3,750, was raised from this property. Owing, however, to severe drought in the early part of the year the mine was practically closed for five months, and this materially interfered with its output. Arrangements have been made for the further testing of the deepest level (240 feet), in which a good body of sulphide ore is exposed; and it is anticipated that the year ahead will prove a more prosperous one.

In Mr. John Hill's mineral lease of 40 acres, at Double Peak, a good copper lode has been discovered; 20 tons of ore raised from which, treated at Dapto, returned  $1\frac{1}{2}$  tons of copper. The prospects of this mine are good, and the lessee is at present negotiating with a company to take it over.

In addition to the foregoing, several mineral leases have been applied for on Mount Dromedary, Double Peak, and in the vicinity of Mount Allan Gold Mine and Hill's mineral lease. Good assays have been obtained from some of these, and a bright future is predicted for the copper-mining industry in this district.

### ALBERT MINING DISTRICT.

#### *Broken Hill Division.*

A large area of ground in the outlying portions of this Division is held under lease or mineral prospecting area for copper; but, so far, the veins have generally proved small, and have cut out below 30 feet.

The only copper won in this Division during the past year was that saved from roasted sulphides by the Broken Hill Proprietary Silver-mining Company, in connection with their silver-mining operations, and by the Sulphide Corporation (Ltd.), and the Diamond Jubilee Company, from ore wrought from the latter's property. Some 30 tons in all, valued at about £2,075, was so produced.

#### *Milparinka Division.*

The only workings for copper in this Division are at the Coonibery Ranges; but the four leases taken up at that place are now idle, nor can any work be carried on there at present as there is not a drop of water within 10 miles of it. A good deal of prospecting work had been done previous to the applications to lease being lodged, and a large, well-defined lode was opened on, showing good ore. A bulk test of a parcel of the ore was made at Broken Hill, and it gave a good percentage of copper, with traces also of gold. Its great distance, however, from any convenient centre, and the scarcity of water, are serious drawbacks to any immediate development of the mineral resources of this neighbourhood.

#### *Wilcannia Division.*

Two mineral leases are in force at Grasmere Copper Mine, about 50 miles north-west of Wilcannia. But no attempt whatever has been made to work them, the lessees holding them simply for market operations.

TIN

## TIN MINING.

The abnormal jump in the value of tin, and its sustained high price, greatly stimulated the search for this metal during the past twelve months, and 1,489 miners were occupied in the tin-mining industry, as compared with 1,083 in the previous year. But their operations were greatly hampered by the general scarcity of water experienced on most of the tin producing fields, and the year's product, though fairly satisfactory, has, in consequence, not been as large as might have been hoped for had more advantageous seasons prevailed. However, the results of the increased activity which has been displayed may further reveal themselves in course of time, when water becomes more plentiful in some of the prospected localities.

The yield of tin for the past year is estimated at 826½ tons, valued at £98,428, showing an increase in value on last year's figures, but, apparently, a decrease in quantity. It should be stated, however, that the yield, as above given, only includes the direct product of the Colony; whereas in previous years the tin refined in New South Wales from imported ores has also been included in the annual outputs of this metal, and, computed on a like basis, this year's yield would have been 1,267·3 tons, valued at £150,919, as compared with 895 tons, valued at £69,000, produced in 1898.

TABLE showing the quantity and value of Tin, the product of the Colony or of imported ores refined therein, exported from New South Wales, since the opening of the Tin-fields in 1872.

Year.	Ingots.				Ore.				Total Value.

\*Exports of tin refined in New South Wales from imported ores not included.

During the past year an attempt made to work a deep tin lead supposed to exist at Kangaroo Flat, in the Emmaville Division, was frustrated owing to the influx of water proving too heavy for the pumping machinery in use; but it is understood that another endeavour is likely to be made to work this ground. With the assistance of Government aid, it is also intended to commence work almost immediately upon a deep tin lead at Nine-mile, in the Deepwater District, and, if the water difficulty can be overcome, good results are anticipated.

Several special leases have been acquired for tin-dredging purposes, but active operations in this direction have not yet been commenced. It is believed that when this industry gets a fair start the output of tin will be considerably augmented thereby, as there are numerous deposits of this metal known to exist in ground too wet to be worked by the ordinary alluvial tin-miner.

The information given in the following notes on the tin-mining industry is taken from reports furnished by the Wardens and Mining Registrars:—

## LACHLAN MINING DISTRICT.

*Pfifield Division.*

Within the past twelve months several leases for tin have been taken up at Burra Burra, but practically no work has been done on them; probably because water is not sufficiently plentiful.

*Yalgogrin Division.*

An area of 80 acres, about 7 miles westerly from Yalgogrin, has been applied for under mineral lease for the purpose of mining for tin, but the party has not yet commenced operations.

TUMUT

## TUMUT AND ADELONG MINING DISTRICT.

*Germanton Division.*

Some desultory prospecting for tin on private property has been carried on in this Division during the past year.

*Wagga Division.*

At Benke's Creek, some 5 miles southerly from Pullitop, tin has been found associated in the lode with wolfram; but on account of the alleged impracticability of separating the metals the ore has not been mined for.

Stream tin is found in the bed and banks of the creek, and some claims lately taken up are said to show a good depth of wash and to give a return of an ounce to the dish. The creek is, however, entirely waterless at present, and nothing can be done towards development until a rainy season sets in.

## SOUTHERN MINING DISTRICT.

*Bombala Division.*

The Monaro Tin and Gold Company has started operations in this Division, and have ten men employed. Up to the present very little has been done, and only a few pounds of tin have been obtained.

## HUNTER AND MACLEAY MINING DISTRICT.

*Kempsey Division.*

The Carrai tin-field—a new discovery reported during the year—was, it appears, known to the original prospector, H. A. McMaugh, for some considerable time; but it was not until September that applications for mineral leases or prospecting areas were made. So far, 360 acres have been applied for at Carrai and in its vicinity. The country is very difficult of access, and, in consequence, until a traversable road is made, not much work will be done. When this obstacle is overcome, operations there are likely to be expansive, as the wash extends for a large distance, and is of good depth. The prospecting now taking place is meeting with encouraging results, and it is thought that two or three of the leases will give very profitable returns when properly developed. As a few of the applicants have command of a good deal of capital, the ground will be thoroughly worked and tested.

With regard to the Gundle Tin-field, very little work has been performed there during the past year. It is stated that about twelve men are at work, but only a small quantity of ore was raised. Several suspensions have been granted, the miners having been hampered by inrushes of water, and want of necessary capital to purchase additional machinery. The lessees expect that arrangements are likely to be completed at an early date which will enable them to work on more economic methods, and with an increased capital.

During the year six mineral licenses were issued, and twenty-five mineral leases applied for in this Division.

## PEEL AND URALLA MINING DISTRICT.

*Glen Innes and Inverell Divisions.*

In consequence of the rise in the price of tin there has been great activity shown in these Divisions in this class of mining. On the Glen Elgin and Oban fields, numerous parties working over scattered gullies, principally on private lands under authorities to enter, have during the past year won about 89½ tons, valued at £5,651. In the Inverell Division the Elsmore Valley Tin-mining Co. have sunk a second shaft, erected new winding machinery, and raised 139 tons of tin ore, valued at £10,611. Many applications were also made to enter upon private lands in various localities in the neighbourhood of Ashford, to search for tin, diamonds, antimony, and silver. Most of these places have been worked and tested with unsatisfactory results—nothing payable being discovered—and towards the close of the year active prospecting gradually subsided; only a few parties now continue working, some of whom are in receipt of Government aid. Applications for large dredging areas—on Cope's Creek for tin, and at Oban for gold and tin—have been received; but no operations have yet commenced at either of these places.

*Tingha Division.*

In this Division, also, the increased value of tin caused mining for this mineral to boom, and diligent search to be prosecuted in fresh areas. Some 400 tons of ore, estimated in value at £22,000, have been won during the past year; and there are, besides, about 2,000 loads of wash-dirt at grass awaiting treatment. A good deal of prospecting was also carried on in this Division, upon private lands, under authorities to enter; but the results obtained did not prove encouraging and in most instances the work has been abandoned. During the year 312 miners' rights, 491 mineral licenses, and 27 business licenses were issued, and 301 mineral lease applications were received.

*Kookabookra Division.*

Some 5 tons of tin were won during the year from the old alluvial workings in this Division. Want of water greatly hampered operations, and only about half-time was worked.

*Armidale Division.*

During the latter half of the year a slight impetus was given to mining in this Division, in consequence of a discovery of tin at Boorolong. There are about thirty Europeans and twenty Chinese on the field. Five mineral leases have been applied for, and eighteen mineral claims have been conditionally registered.

*Bendemeer Division.*

The only metalliferous mining carried on in this Division is for alluvial gold and tin, and the series of droughts experienced in the district for some years past have proved greatly detrimental to operations. During the past year seven tin-miners were at work at Watson's Creek and Giants' Den, and between them won 9 tons of alluvial tin, valued at about £50 per ton.

Some 640 acres have been taken up within this Division, on the McDonald River, for the purpose of dredging for gold and tin; and about 450 acres have also been applied for at Watson's Creek for tin-mining purposes by means of dredging plant.

*Warraba Division.*

During the latter part of the year 200 acres have been taken up in the parish of Warrabah, in this Division, for tin-mining purposes. Operations have not yet been commenced, but probably soon will be.

*Bingara Division.*

Prospecting work for tin is being carried on about midway between Inverell and Bingara. At the latter place, in the parish of Delungra, T. Hartogg has done a good deal of surface prospecting on his lease, and 15 cwt. of tin has been won. Indications of deposits of bismuth were also found.

At Dumboy, in the same locality, some twenty men are prospecting.

## NEW ENGLAND MINING DISTRICT.

*Tenterfield Division.*

A find of tin was made by Willows and party, in a gully running into Bolivia Creek, near Bolivia Homestead; and between 30 and 40 cwt. of good tin were obtained with very little work, and sold at the rate of £52 a ton. The prospectors drove into the side of the gully and kept on tin for a distance of some 20 feet, when the claim was sold; but after having sunk a shaft a short distance in from the bank, the purchasers appear to have abandoned it. The shaft is full of water, but apparently payable tin is inside—in the drive. Pending development, it is impossible at present to say whether this find is more than a working-miner's claim or not.

*Emmaville,*

*Emmaville, Deepwater, and Wilson's Downfall Divisions.*

The increase in the price of tin greatly encouraged the tin-mining industry in these Divisions, and the yield of the metal during the past twelve months very considerably exceeded that of the previous year. In 1898, 473 tons, valued at £18,920, were obtained, as against 696 tons, valued at £39,310, won during 1899.

As in former years, the greatest quantity came from Emmaville and Deepwater, including Nine-mile and Torrington. It is very hard to separate the results of the year's operations, as the best return is obtained from the Railway Office at Deepwater, whence it is all sent away after having been smelted at the Tent Hill Smelting Works. From that Railway Station the amount of 576 tons 7 cwt. was sent away during the twelve months, and represents the winnings of both the Emmaville and Deepwater Divisions.

In the Emmaville Division, an effort was made during the year to bottom on the deep ground at Kangaroo Flat, where rich deposits of tin were said to exist; but the efforts were futile owing to the presence of water in vast quantities. A company was formed, and pumping machinery brought into use; but the water proved too strong, and after working for some months the holders were compelled to abandon further attempt. O'Donnell and party were more successful in what is known as Kennedy's Paddock, on the Graveyard Creek, about 3 miles west from Emmaville; and they succeeded in bottoming on good wash, under the basalt, at a depth of 130 feet. This property is being floated into a Company, the present holders being unable to cope with the heavy expenses incurred in working such wet ground. Heavy deposits of tin have been worked in this vicinity for the last twenty years, and it is stated the dip in every case was towards O'Donnell's ground; but up to the present the water has always beaten the miners, their pumping appliances having been primitive. The Ottery tin lode, situated at Tent Hill, about 4 miles north-east from Emmaville, has been worked continuously during the year with very satisfactory results. The ore is roasted and then carted to the Glen battery, where it is crushed and treated by up-to-date machinery. Alluvial tin mining has been carried on with great vigour during the year at Y Water Holes, Graveyard Creek, Rose Valley, Glen Creek, Paradise, The Gulf, Black Creek, Carpet Snake Creek, Kangaroo Flat, The Grampians, and many other smaller places.

In the Deepwater Division about 140 Europeans and 35 Chinese were engaged in alluvial and surface reef tin-mining, and the amount of their win is estimated to have been about 200 tons. The Deep Lead Tin Mining Company, at Nine-mile, with very generous assistance from the Department, have commenced to sink a shaft to try and bottom on the Deep Lead. The work having only recently started, it is impossible to say more than that the prospects of success are bright if the vast quantities of water underground can be overcome.

The only other place yielding any quantity of tin is Wilson's Downfall, which during the year produced 69 tons—an increase of but 4 tons on last year's win, though the value displays a much greater comparative increase, being £4,310 for 1899 as against £2,275 for 1898.

Some attention has been paid to prospecting for tin lodes in this district; but, although it is known that these do exist in the border ranges between Stanthorpe and Wilson's Downfall, no favourable results have so far been obtained. Much of the richer alluvial portions of the field have been worked out, yet the flats and banks of the creeks are still being worked; and fossicking by Europeans and Chinese, in the beds of the creeks, has resulted in fair wages being earned.

The very dry season has greatly retarded the work on all the small holdings here. It is usually such a wet place that none of the dams are of any size, and these, though always sufficient in former years, have been quite inadequate this year; in consequence of which, many applications for suspension of work for want of water have had to be granted. Great interest is also taken here in the dredging industry, and Wylie Creek, Ruby Creek, and Herding Yard Creek have all been applied for, for dredging for tin. These creeks, with their wide sand beds, have all been worked over and over again by the small holder, but at no great depth; and now, after prospecting the lands at some depth, the applicants for these leases think that handsome returns are to be obtained by dredging. Now, that the Act is passed this movement is anxiously watched, and, if successful, the yield of tin ought to be considerably increased for 1900.

## ALBERT MINING DISTRICT

*Broken Hill Division.*

At Euriowie the tin-mines have again been applied for, and a little work has been done. The 3 or 4 tons of tin ore raised proved very remunerative at the market prices ruling. An effort to float these properties in London is now being made.

## IRON, IRONSTONE FLUX, AND IRON OXIDE.

The examination and mapping of our iron ore deposits by Mr. Geological Surveyor Jaquet has been continued throughout the past year, with the object of preparing a comprehensive monograph on this interesting and consequential subject, and in anticipation of the special attention which is sure to be devoted to these deposits before long, when the Department desires to be in a position to furnish reliable data, and otherwise assist as far as possible those who may contemplate the erection of works for smelting our iron ores, and firmly establishing in the Colony an industry which must ultimately prove an important and remunerative one, both for capital and labour.

At the Eskbank Ironworks, Lithgow, which are the only works of the kind in the Colony, Mr. Sandford has employed on the average some 220 men and boys during the past twelve months, and turned out 6,500 tons of finished iron (manufactured from old scrap iron), valued at £55,550, as compared with 5,200 tons, valued at £42,250, produced in 1898.

TABLE showing the quantity and value of Finished Iron, Pig Iron, &c., made in the Colony of New South Wales from rolled scrap iron, to the end of 1899.

1890	3,413·44	39,949	Totals.	79,056·47	606,643

The raising of ironstone flux is an industry only established in this Colony since the erection of the large metallurgical works at Dapto and Cockle Creek, where it is utilised in connection with the smelting operations conducted at those places. Between thirty and forty men were employed winning this material during the past year, and 10,521 tons of ironstone, valued at £8,417 8s., were raised and sent away from Carcoar and Marulan. Nearly the whole of this flux contained traces of gold.

The production of iron oxide during the past twelve months amounted to 396·35 tons, valued at £346. This product is employed for gas-purifying purposes, and is absorbed by various gas-works within the Australasian Colonies.

The only localities within the Colony where any mining for antimony has been carried on during the past twelve months were in the neighbourhoods of Hillgrove and Bowraville.

The following notes upon the subject, taken from the Wardens' and Mining Registrars' reports, may prove of interest:—

PEEL AND URALLA MINING DISTRICT.

Hillgrove Division.

At Hillgrove the Eleanora Gold and Antimony Mining Company produced, during the year, 27 tons of antimony (oxide, and crude white metal), valued at £395; and 2 tons of antimony concentrates, valued at £50, were won by the Hillgrove United Gold-mining Syndicate. A few tons of antimony ore were also raised from the Garibaldi Gold-mining Company's property, by tributers.

HUNTER AND MACLEAY MINING DISTRICT.

Kempsey Division.

The antimony mines at Bowraville are not progressing very satisfactorily, as the ore appears to occur in patchy quantities. Mr. P. M. Hart, who is the principal operator there, reports that from one lease he has raised 116 tons of ore, estimated to contain 29 tons of antimony, and valued at £228. On another lease, on Purgatory Creek, which he has been working on tribute since the middle of July, he employs about four men, and has shifted about 80 tons of the reef, from which he won 20 tons of ore, estimated to average 60 per cent. of metal. No sinking has been done on this lease, the lode, which is carrying very good ore at present, being worked by a drive on the side of a hill, where it showed out at the surface. Three other parties working in the district raised between them 55 tons of ore, valued at about £370. Two of these parties, however, finding the deposits too patchy to be remunerative, have abandoned their ground.

BISMUTH.

Only 15·55 tons of bismuth, valued at £3,355, was exported during the year just ended. This is a decrease on the value of the export for 1898; but, as has been pointed out in former issues of the Annual Report, the output of this metal throughout the world is controlled by a "ring." The supplies of the metal are stated to greatly exceed the demand; and this superfluity is assigned as the reason for the necessity of such mutual arrangements as will enable the price to be maintained at a figure remunerative to mine-owners.

Bismuth

Bismuth ore is widely distributed over this Colony, but the principal localities from whence it has been raised in the past have been the Kingsgate Mine, in the Glen Innes Division, and the Jingera Mine, in the Pambula Division. At the former of these no mining has been carried on for some few years; but work at the latter property is still being continued. During the past year, indications of bismuth deposits were found in the parish of Delungra, Bingara Division; whilst from the "Old Nanima" Mine, in the Yass Division, ore to the value of £90 was raised.

TABLE showing the quantity and value of Bismuth Ore, the product of the Colony, exported from New South Wales, up to the end of 1899.

#### PLATINUM.

Fifield was the single locality in the Colony from whence any platinum was won during the year, and the yield amounted to little more than half that of 1898. Considering the great scarcity of water experienced in the district, a fair amount of prospecting was done; but in no case was the result satisfactory, and many of the miners who had been seeking gold and platinum left the vicinity.

In the Bullahdelah Division, a prospector to whom special concessions have been granted for the purpose of prospecting the beach between Smith's Lake and Seal Rocks, complains that his chief obstacle to success is the presence, in excessive quantities, of osmiridium. This might, perhaps, indicate the presence there of platinum also, which some few years ago was found in considerable quantity by the beach miners in the Ballina district.

TABLE showing the quantity and value of Platinum won in the Colony of New South Wales up to the end of 1899.

1896	2,438	3,479			
1897	1,966	2,949	Totals ..... £	7,765	11,425

#### CHROMIUM.

The output of chrome for the year is very satisfactory; the total quantity exported being 5,243 tons, valued at £17,416, as compared with 2,111 tons, valued at £6,301, exported during 1898. The mineral is at present only being won in the Gundagai Division, although chrome ore is found in many other parts of the Colony. Messrs. Quilter Bros.' chrome mine at Mount Lightning, in the Mooney Mooney Ranges, and about 18 miles distant from the township of Gundagai, is the principal one at work, and the deposits in that property are stated to show no sign of giving out, either in bulk or quality.

1896	3,851·75	11,280	Totals .....	21,948·65	70,975

COBALT.

The only deposits of cobalt at present being worked in this Colony are at Port Macquarie, Kempsey Division, where, during the year, Messrs. Telfesten and Wyburn have continued to raise this mineral.

The ore occurs in nests or pockets in serpentine and the overlaying clays resulting from its decomposition. The present depth of their shaft is 42 feet.

Some applications to mine under roads and reserves for this mineral are awaiting approval ; and as the deposits seem fairly extensive, projected operations should, no doubt, result in an increased future output.

WOLFRAM AND SCHEELITE.

These minerals occur in very many different localities within the Colony, but the deposits, as a general rule, have been found too patchy, of too low a grade, or, owing to association with other minerals, of too complex a character to be profitably handled. The steady and somewhat keen demand that has existed during the past few years for tungsten ores, has, however, encouraged prospecting work in search of payable deposits, and in the past twelve months a fair amount of mining for wolfram and scheelite has been done.

At Hillgrove the local yield of scheelite is attracting a good deal of attention. It is contended that this field produces more scheelite than any other part of the world, and an attempt being made to limit the output is mooted. During the year about 70 tons, valued at £2,750, were sold. None of this mineral appears to have been discovered upon any of the large mining properties, but considerable development of scheelite patches has been made—apart from the operations of the Fuller's Hopetoun Scheelite and Gold Syndicate—and some thirty or forty men are employed mining for antimony and sheelite on various small claims in the district. It is stated that about 76 tons of scheelite ore were raised during the last quarter of the year. The Hopetoun Syndicate, whose property is situated at Metz (Hillgrove West), during the year sold 4 tons of scheelite at an average price of £40 per ton, and, at the close of the year, they had also 70 tons of undressed ore at grass.

At Scrubby Gully and at the Gulf, in the Emmaville Division, wolfram was being won, but not in any great quantities, and in the Deepwater Division about a dozen men were engaged mining for the same mineral. Most of the wolfram won in the Emmaville and Deepwater Divisions is trucked to Sydney from Deepwater railway station, and as it is often bulked there with other ores it is difficult to accurately estimate the amount won in each of the districts ; but ore totalling in value about £800 would represent the combined yields for the year. Notwithstanding continuous prospecting, no deposit of any permanence has been yet discovered in either of these two Divisions ; the mineral won has been obtained in small quantities, and from scattered patches.

In the Tuena Division a prospecting party have been working on a new find, consisting of a small but rich vein of scheelite, situated to the west of Tuena and close to the police paddock. The vein is very narrow and the country rock hard.

PLUMBAGO.

Two men have been engaged during the past year in doing some prospecting work for this mineral at Undercliff, Wilson's Downfall, where deposits of plumbago are known to occur. With the help of aid from the Prospecting Vote they have been driving into the side of a range with the intention of cutting the lode supposed to exist there ; but this has not yet been done. This is the only mining for plumbago which is at present being carried on, and further assistance to continue the work has been granted.

DIAMONDS.

A HALF-DAY'S "WASH UP."  
(From the "Star of the South" Diamond Mine, Boggy Camp, N.S.W.)

NEW WASHING PLANT AT THE "STAR OF THE SOUTH" DIAMOND MINE.  
(Boggy Camp, Tingha Division, N.S.W.)

## DIAMONDS.

During the early part of the year a good deal of interest and activity was displayed in our diamond-mining industry, which is at present almost entirely confined to the fields in the Bingara and Tingha Divisions of the Peel and Uralla District. New and improved appliances have been added to the plant on several of the larger mines, and it was hoped that the output for the year would have been of greater magnitude than has proved. Unfortunately, diamond-washing operations on the majority of the mines were brought almost to a standstill, owing to a recurrence of the water famine which has been the experience of the fields for some years past. The restriction thus caused is the more to be regretted, as, from correspondence received, it appears that in the early part of the present year (1900) there was an excellent market in London for Australian gems, owing to the interruption of supplies from the South African fields. Still, a considerable amount of prospecting and developing work was, nevertheless, carried out; and it has been ascertained that at least 25,874 carats of diamonds were won, the value of which is estimated at £10,350. Nearly the whole of this yield was derived from the Boggy Camp field, situated about 15 miles west of Tingha; diamond-mining on the Bingara field having been, in the absence of an adequate supply of water, almost entirely limited to work of an exploratory description. It is pleasing to note that, notwithstanding the continued disadvantages the industry has laboured under, the yield for the past twelve months was, in quantity, the largest that the Department has yet been in a position to record; and there can be little doubt that when a plentiful supply of water is available our diamond output will be materially increased. In conclusion, it may be stated that there seemed a general inclination among leaseholders to conceal, as far as possible, the results of their operations; and, as in former years, a considerable amount of difficulty was experienced by the Department in obtaining information necessary for statistical purposes.

TABLE showing, approximately, the quantity and value of Diamonds won in the Colony of New South Wales to the end of 1899.

\* Estimated. † Result only of 19½ loads washed in January (Cope's Creek). ‡ Output of Malacca Co. (Inverell) only. § From "Monte Christo" mine (Bingera) alone. ¶ Output from Bingera only. || From Boggy Camp (Tingha) only. \*\* No information obtainable.  
NOTE.—This table is compiled from such information as is available, but is believed to considerably understate the actual output.

The following notes on the diamond-mining industry are taken from the Wardens' and Mining Registrars' reports:—

## PEEL AND URALLA MINING DISTRICTS.

*Bendemeer Division.*

Diamonds have been found in the stanniferous wash at Brown's Hill, Watson's Creek, about 17 miles north of Bendemeer. One stone forwarded to the Department, although found upon examination to be a true gem, was of bad colour and little value. Another one, however, found in the same locality, was of better colour and greater value; and it is thought possible that further development may prove their occurrence in the locality in sufficient quantity to be payable. The prospectors, J. Toole and party, have been at work for some months past, and are still persevering. The Prospecting Board has granted them aid to drive 200 feet, and at the end of the year they had about completed the first 50 feet.

*Bingara Division.*

The Warden of this Division was unable to ascertain its diamond yield for the year. In any case it was very small, as during the greater part of the year the mines were idle owing to scarcity of water and other causes, and the work done was mostly of a prospecting and exploratory character.

What has so far proved the richest lease on this field is the one known as the Monte Christo. It was purchased from Captain Rodgers, about the middle of the year, by Mr. W. J. Chick, on behalf of the New South Wales Search Syndicate, Ltd., and a good deal of work has been done in opening up and testing the wash. Mr. Chick\* has a number of leases in the locality, close to the Monte Christo, and it is believed intends bringing water on to the ground from the river.

The Australian Diamond Mining Proprietary Company have an area of 600 acres, and have expended a good deal of capital. Numerous shafts have been sunk, varying from 30 to 120 feet, and several tunnels driven, varying from 40 to 180 feet in length. In nearly all cases diamantiferous wash has been struck, varying in depth from 1 foot to 10 feet. One large hill has had tunnels driven from all quarters through the wash, the existence of thousands of loads of which has thus been proved. Whether this contains diamonds in payable quantities is a matter still to be tested; the probabilities are that a large percentage of the wash is barren drift.

It is considered that these mines can only be made to pay if worked on an extensive scale, and a large quantity of wash put through daily; and to enable this to be done there must be an adequate supply of water.

This the Company have tried to obtain, but so far without success. A large well has been constructed, about 12 feet square and 70 feet deep, but so slowly does the water make that it would be exhausted in about ten days if washing operations were in full swing, when work would have to be suspended till sufficient water made again. A large dam has been made across a deep gorge, but the seasons have been so dry that it has never had more than 8 or 9 feet of water in it since its construction, and it is understood to have the fatal drawback of not holding water for any time. Evidently a permanent water supply cannot be obtained on the field, and the only practical way out of the difficulty will be to bring the

\* Mr. W. H. Willoughby, of Inverell, has now taken the place of Mr. W. J. Chick, as local Manager of the above syndicate.

the water from the Gwydir River, which is distant some 3 or 4 miles. This, no doubt, will be expensive, but if ever any of the diamond mines in this locality are to be worked at a profit, especially when it is considered that, with the exception of the Monte Christo, none of these mines have been proved to be rich in diamonds, it can only be done by working them with the strictest economy, and on an extensive scale; in other words, a great quantity of wash must be put through daily, which can only be done by having a permanent and almost limitless supply of water.

On Mr. Allpress's leases, which have lately changed hands, a fair amount of prospecting has been done, but with very little success, so it is said.

#### *Moree Division.*

No mining, whatever, has been carried on in this Division during the past year; and the only item of interest was the alleged discovery of diamonds near Mungindi, which is situated on the River Barwon and close to the Queensland border; but, from what can be gathered, the so-called diamonds turned out to be quartz pebbles, and consequently valueless. At all events no claim was pegged out, nor lease applied for, and nothing further has been heard about the matter.

#### *Tingha Division.*

The Boggy Camp population has more than doubled, and there are at least 1,000 persons on the field; but diamond mining has not been as active, nor the results as satisfactory, as was expected. Many of the miners in this locality find employment, however, in the silver-lead mining industry at Bora Creek—about 3 miles distant.

It is estimated that over 25,800 carats of diamonds, of an average value of 8s. per carat, were obtained in this Division during the past year. The principal diamond mines at work are those of the Inverell Diamond Fields Ltd., The Soldiers' Hill Company, and The Australian Diamond Fields, Ltd. (Copeton); but there are, besides, a number of small properties giving employment to from two to fifteen men.

The Inverell Diamond Fields, Ltd., have a most complete and up-to-date diamond-washing and saving plant, which includes two puddlers, two elevators, and a "pulsator," and which has a capacity of 300 cubic yards per eight hours. They also have two winding engines and gear and four pumps at the mine, together with the requisite steam driving power; and a water supply plant, consisting of pump and steam driving engine, on the Gwydir River from which water is brought on to their property by means of over a mile of 6-inch piping. Besides diamonds, this company produces a considerable quantity of tin. Garnets, sapphires, and topaz are also found in their wash-dirt, but these being of no commercial value are not saved.

### OPAL.

In three different localities situated within outlying portions of the Cobar Mining District which have been prospected during the past year, indications of opal deposits are stated to have been found; but although it is believed to be quite probable that, in the course of time, payable deposits of this gem-stone will be found in that extensive District—many large areas in which are yet practically unprospected—nothing of any importance in this direction has yet been discovered. Meanwhile, the White Cliffs Opal-field, situated in the Albert Mining District, and about 60 miles north-west of Wilcannia, continues the only portion of the Colony where noble opal, in any quantity, is being produced.

For some years the annual yield from this field has been constantly increasing, and the value of its output during the past twelve months—estimated upon information kindly furnished by some of the principal buyers on the field, and upon data obtained from other reliable sources—is believed to be nothing short of £135,000, as compared with £80,000, accepted as a safe estimate of the value of the yield obtained during 1898.

During the middle of the year a rapid and very material increase in the population of the field took place, and at one period considerably over 1,000 miners were at work; but it would appear that, from the first, the probable effects of this too sudden influx were dubiously regarded by some of the older residents who best understood the conditions of the local market. The augmented quantity of opal produced, the bulk of which were of the poorer qualities, resulted in temporarily glutting the market; and during the last quarter of the year the fall in prices caused much work to be discontinued, and a consequent exodus of many wage-earners. At the end of the year, however, there were still some 750 miners on the field, the continued progress of which there is no reason to doubt notwithstanding this temporary check; for as present stocks become absorbed, there should be a tendency towards an increased demand for this gem-stone—especially its finer qualities—and enhanced values should then again rule.

The following interesting particulars are taken from Mr. Warden Fletcher's report:—

During the past twelve months the opal field at White Cliffs has experienced much vicissitude. In the early part of the year the population—which was estimated at the end of 1898 as about 1,200—steadily increased in spite of the imminence of a water famine, happily averted by a timely fall of rain. The state of the surrounding country, which suffered from a long protracted drought, was to a great extent responsible for this increase of population. At the stations around little or no work was to be obtained, and in Wilcannia everything was in a depressed state; so that families removed constantly out to White Cliffs, which was the only place in the district that could be called in any sense prosperous. During the winter, and up to August, these conditions were intensified; and the population increased by such leaps and bounds that it came to be estimated as high as 2,500. Although during this period all classes of opal kept up to their former market values, it was nevertheless felt that this appearance of progress and prosperity was delusive—that much of the money being spent at White Cliffs was not earned upon the field, but represented rather the accumulated savings of many people dependent on what money they had brought with them until their hope of an opal win should be realised. It was, therefore, foreseen that if the price of the gem went down, a large number would be forced to leave; and in September this occurred. The large increase of workers had caused an over production of the poorer classes of opal, which, though hitherto saleable, now became absolutely unmarketable; and as at least three parts of the opal won was of this quality, and a very large proportion of the miners were dependent on it, the existing state of things could not continue. Since that period there has existed a dulness in the opal market at White Cliffs; though good quality of opal still commands its price, and so far as can be learnt there is no falling off in the amount of opal which can be obtained.

It seems clear, however, that the White Cliffs Opal-field will not carry so large a population as sought to be dependent on it. The nature of the gem, and the uncertain and at times limited demand for it, must always render the market liable to be overstocked. In illustration of what has been stated, it may be mentioned that the White Cliffs Opal Company, who had at the end of August 350 tributaries working on their leases, dismissed 300 of them, and other lessees followed the same course. At the same time, White Cliffs has a future before it for several years at least.

The town of White Cliffs has naturally increased very much in size. A very considerable number of the inhabitants have purchased their blocks, and churches and hospitals are being built.

The

WASHING PLANT OF THE AUSTRALIAN DIAMOND FIELDS (LIMITED).  
(Copeton, Tingha Division, N.S.W.)

The water supply—always a source of great anxiety—will be greatly improved by the Government tank at present being sunk a mile south of White Cliffs, on the Wilcannia Road.

The output of opal is necessarily a mere estimate. For 1898 Mr. Warden Fletcher estimated the output, in value, at from £80,000 to £120,000; and preferred the lower valuation should be taken. Whether he under valued the output for 1898 or not in putting it at £80,000, he feels sure that he is not over estimating the output for 1899 at from £120,000 to £150,000; in spite of the falling off in the three last months of the year. Very many people, he states, would not think £150,000 an excessive estimate. As to the weight—that is still more difficult to estimate; on account of the great difference in price between the various classes of opal, and owing to the fact that opal buyers, even when willing to give information, cannot do so, as they do not, as a rule, keep books or record the weight of their purchases—not at all events with any accuracy. All that can be given is the Post Office return of the total weight of opal parcels which went through the Post during the year; and this was 2,795 lb. avoirdupois.

As to the outlying portions of the White Cliffs Opal-field, three parts of the miners who were at work on the Bunker Creek diggings, 12 miles from White Cliffs, have left there, and no attempt has been made during the year to extend operations outside the central field.

The number of applications in the Warden's Court at White Cliffs was fifty this year, as against eighteen last. The number of miners' rights issued during 1898 was 283; this year over 870 have been issued.

TABLE showing the estimated value of Noble Opal won in the Colony of New South Wales to the end of 1899.

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	lb.	£		lb.	£
1890	195·00	15,600	1896	1,390·00	45,000

1893	449·35	12,315	1899	.....	135,000
1894	198·00	5,684			
1895	333·00	6,000	Totals.....	.....	376,599

#### EMERALDS.

Butler's Reef, some 10 miles from Emmaville, is the only place in the Colony where these gems have been found, but no work has been performed there this year. A great amount of sinking, driving, &c., has been done on this property in the past, and some thousands of pounds spent in developing it; but the returns did not anything like cover the expense incurred, and it is quite possible that the ground will be abandoned if help does not come from some quarter to assist in prosecuting a search. Some of the gems sent to England from this mine are stated to have been highly praised.

#### TOPAZ.

About 60 oz. of topaz was obtained during the year, in the Kookabookra Division. The parcel was only valued at £4.

#### CINNABAR.

A deposit of cinnabar, giving a large per centage of quicksilver, has been discovered in the parish of Ewengar, county of Drake; but the necessary plant for successfully treating the material on the spot is not yet completed, and the ore is at present being forwarded to Sydney. The company into whose possession the property has passed expect to start the work in all its branches almost immediately; and a large and valuable output is anticipated.

In the vicinity of Carwell (between Cudgegong and Rylstone; in the Tambaroora and Turon Mining District) some further prospecting for cinnabar has been carried on during the year, but only indifferent results have so far been obtained.

#### KIESELGUHR.

Extensive deposits of this substance exist at Wyrallah (in the Lismore district), at Barraba, Cooma, and elsewhere. Upon a deposit at the first-named place, some work was done a few years ago; and several hundred bushels of the "diatomaceous, or infusorial, earth" sent away on trial, was stated to have realised, delivered in Sydney, 3s. 6d. per bushel. Evidently, however, there is a difficulty in finding a market for this mineral, and so far as is known no mining operations for it are now in process.

#### ZINC.

TABLE showing the Quantity and Value of Zinc Concentrates, the product of the Colony, exported from New South Wales up to the end of 1899:—

Year.	Quantity.	Value.	Year.	Quantity.	Value.

1894	.....	.....			
			Totals .....	118,632·45	£112,879

LIMESTONE (Flux).

The quarrying of limestone flux, at Myall Lakes, is being continued ; and, during the past year, Mr. W. W. O'Neill sent away some 1,000 tons of this material for the use of various smelting-works. The property has recently changed hands, and is now worked by the Port Stephens Limestone Company, of Newcastle.

The present proprietary have opened up a new face, 50 feet in depth, and have completed a new jetty and an overhead tramway to the lake. At present only a few men are employed, but operations on a fairly large scale are soon likely to begin.

In other parts of the same district there are large deposits of limestone ; but, these, though frequently prospected, do not appear to be of the necessary quality.

TABLE showing the Quantity and Value of Limestone Flux raised in the Colony of New South Wales to the end of 1899 :—

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	Tons.	£		Tons.	£
1890	41,438·8	41,989	1896	88,924·0	54,261
1891	74,057·0	65,337	1897	67,590·0	41,798
1892	103,368·0	93,031	1898*	9,253·0	5,783
1893	130,635·0	111,041	1899	1,000·0	750
1894	89,990·0	69,290			
1895	104,194·0	68,160	Totals .....	710,447·8	£551,460

\* Owing to the removal of the Broken Hill Smelting Works to Port Pirie, S.A., the Tarrawingee Flux Co.'s Quarry (from which large quantities of limestone flux were previously raised) ceased operation in the early part of this year.

ALUNITE.

The Alum Company is still working its alunite property at Bullahdelah, and are now opening up new quarries likely to turn out well.

During the year an average of eleven men have been employed, and 921 tons of alunite have been shipped to the Company's Works at Runcorn, near Liverpool, England.

TABLE showing the Quantity and Value of Alunite, the product of the Colony, exported from New South Wales to the end of 1899 :—

Year.	Quantity.	Value.	Year.	Quantity.	Value.

MANGANESE.

For some years past little or nothing in the way of mining for this mineral has been done. In various parts of the Colony deposits are to be found ; but the low market value prevents profitable working.

Totals .....	.....	78,967 0 0	78,967 0 0
General Total.....	.....	£ 134,064,712 4 9	

\* The quantity and value given in this summary as the total production of its several items prior to 1st January, 1899, do not in certain instances agree with the figures given in the Annual Report of last year. Where they do not it is because of adjustment, which has been necessary to bring them into accord with the totals as shown in the respective independent tables appearing under their proper headings elsewhere; or, where no such special table appears, the adjustment of previously given figures has been made to bring them into agreement with the sundry particulars published from time to time in former reports. † Rolled scrap iron.

In conclusion, it may be stated that, viewing the arid conditions that have so widely prevailed throughout the Colony, consequent upon a succession of exceptionally dry seasons—which have fettered the movements of the individual prospector, and seriously impeded work in many of our principal mining districts—the result of the past year's operations must be considered as satisfactory.

The substantial progress made under such adverse circumstances, as disclosed by the all-round increase that has taken place in the outputs of our various mineral products, amply justifies the anticipation that with a break up of the long-continued and disastrous drought a marked expansion in our mineral industries will be experienced.

I have the honor to be,

Sir,

Your obedient Servant,

A large, elegant handwritten signature in dark ink, reading "W. C. Lachlan". The signature is written in a cursive style with a long, sweeping underline that extends to the left and then curves back under the main body of the signature.

Under Secretary for Mines and Agriculture

Department of Mines and Agriculture,  
July 31st, 1900.

## ANNUAL REPORT OF THE CHIEF INSPECTOR OF MINES AND SUPERINTENDENT OF DIAMOND DRILLS.

Sir,

In submitting my Annual Report for the year 1899, I have the honor to acknowledge, with thanks, the assistance given me by Wardens, Coroners, Inspectors of Mines, Wardens' Clerks, and Mining Registrars by reporting, at the earliest possible opportunity, any mining accident occurring in connection with the metalliferous mines in their respective districts.

It is also with pleasure that I beg to acknowledge the great assistance given me during the year by the several Inspectors of Mines, and other Officers connected with my branch, who have all done their duties faithfully and well; and who have performed a considerable amount of extra work during the year, which the increased demands upon the Department in general has necessitated.

During the year I visited officially the following places:—Mudgee, Hargraves, Hill End, Sofala, Wattle Flat, Bathurst, Stuart Town, Orange, Molong, Parkes, Alectown, Peak Hill, Cobar, Girilambone, Mittagong, Grenfell, Young, Adelong, Gundagai, Deepwater, Nine-mile, Torrington, Emmaville, Tent Hill, Kangaroo Valley, Armidale, Puddledock, and Hillgrove.

The papers registered in the Chief Inspector of Mines and Diamond Drill Branch during the year were 3,688; letters written, 2,324; papers to and from records numbered 1,550 and 1,602 respectively. The number of fossickers to the gold-fields assisted with free railway passes was 395, as against 601 in 1898, and 982 during 1897. Thus it will be seen that the issue of free railway passes to gold fossickers is being greatly reduced.

Boring operations with diamond drills were carried on during the year at Tarro (Hexham District), Gulgong, Sunny Corner, Catherine Hill Bay, and Mittagong districts.

At Tarro, in the Hexham district, 602 feet were bored in the coal measures, prospecting for a payable seam of coal.

At Gulgong, 546 feet were bored through very close, hard basalt, for the purpose of prospecting the basaltic covered drifts about the junction of the Black, Happy Valley, and Star Leads, which on the upper parts contained extraordinarily rich auriferous deposits. So far, however, the results of boring operations have been unsatisfactory.

The prospecting operations at Sunny Corner have proved disappointing, and after boring an additional 290 ft. 8 in. during the early part of the year, the work was then stopped and the diamond drill withdrawn. The work was done with a view to possibly discovering a continuation of the gold and silver deposits which produced such profitable yields in the Sunny Corner Mine.

Near the end of the year a diamond drill was erected and started in the coal measures at Catherine Hill Bay, to test several seams of coal; the total depth bored up to the end of the year was 60 ft. 6 in.

At Mittagong a diamond drill bored a total distance of 74 ft. 6 in., in connection with Mr. Geological-Surveyor Jaquet's examination of the iron ore deposits in that locality.

This brought the total number of feet bored during the year up to 1,573 ft. 8 in.

I also have the honor of submitting herewith twelve (12) Tables marked from A to L.

*Table A.*—Showing fatal, serious, and minor accidents during 1899, which may be regarded as true mining accidents.

*Table B.*—Showing fatal, serious, and minor accidents on surface, as distinguished from true mining accidents during 1899.

*Table C.*—Number of men at work in the metalliferous mines in New South Wales, and value of machinery at the end of the year 1899; also the ratio of persons killed and injured per 1,000 employed.

*Table D.*—Fatal accidents on and under surface (exclusive of Broken Hill) during 1899, with verdicts of Coroners' Juries and Magisterial Inquiries.

*Table E.*—Fatal accidents, both on and under surface, Broken Hill District, during 1899.

*Table F.*—Showing fatal, serious, and minor accidents which occurred in the open cuttings, Broken Hill, during 1899.

*Table G.*—Minor accidents under surface in the Broken Hill district during the year 1899.

*Table H.*—Serious accidents under surface in the Broken Hill district during the year 1899.

*Table I.*—Serious accidents on surface in the Broken Hill district during the year 1899. (There were no fatal accidents on surface, in connection with the Broken Hill Mines, during the year.)

*Table J.*—Minor accidents on surface in the Broken Hill district during the year 1899.

*Table K.*—Comparison of accidents recorded during the years 1896, 1897, 1898, and 1899.

*Table L.*—Lead-poisoning returns from the Broken Hill Mines for the years 1895, 1896, 1897, 1898, and 1899. Also returns from other parts of New South Wales.

Thus it will be seen that as far as the Broken Hill Mines are concerned the "Lead-poisoning Act" has been of great benefit. During the whole of the year only 13 cases have been reported from the Broken Hill Mines. But anxiety is felt with regard to the number of lead-poisoning cases which occurred during the year at the Zinc Works; the latter works were erected by the Australian Metal Company. The Company have already been informed that they will have to conduct their works in accordance with the provisions of the Act, and the Rules and Regulations appertaining thereto; as soon as this is done lead-poisoning will be of very rare occurrence in the Barrier Mining District. As the total number of fatal accidents throughout the Colony, it will be noted that during 1899 there were four more than during 1898, the number being 39—of which Broken Hill District contributed 14, or two less than in 1898, and the remaining 25 occurred in various other Mining Districts of the Colony.

The

The percentage of persons killed during the year was very little greater than during the previous year; being 1,208 as compared with 1,154 for 1898.

It will be observed by perusing Table K, that the total number of accidents from all causes throughout the Colony was 192, as compared with 147 in 1898; but as usual the minor accidents form a very large percentage, and as a fact a large number of these minor accidents, although noted here, are overlooked in other Colonies as of too little importance. Many of these minor accidents are certainly of such a trifling nature that, strictly speaking, they can hardly be named accidents, the injured persons frequently returning to work again almost immediately.

In perusing Table D, and noting the decisions arrived at by Coroner's Juries, or Magisterial Inquiries, the same unsatisfactory circumstance presents itself as in all previous years; that the large majority of fatal accidents could have been prevented if the unfortunate persons had only used ordinary precaution, and complied with the Mining Regulations or with the Special Rules of the Mines; or had used even moderate forethought; or had possessed sufficient practical knowledge of the work they undertook to perform. Taking common sense as a guidance I cannot see that in such cases a Mining Manager or an Inspector of Mines can reasonably be held responsible. In Districts where extensive mining operations are carried on there can at all times be found persons willing to work, and earn their living, but who have not sufficient practical knowledge of the work they are engaging to do. The Manager has little, if any, alternative in such matters; he requires persons to do certain work; persons present themselves to do said work, and they are engaged, and it is only after the accident occurs that the Manager is told the injured person had not sufficient practical knowledge. How can the Manager then be responsible in matters over which he has no control, being but too glad to secure the best and most practical men? The persons who undertake work in any mine without having a good practical knowledge of same, at once become not only a danger to themselves, but also a danger to others engaged in the mine.

No doubt the trying climates of Broken Hill and Cobar have had a great deal to do with keeping a larger number of practical miners from moving with their families, or proceeding themselves, to said districts. Another drawback is the great distance from these districts to other mining districts; hence, in case of slackness of work, they would be unable to incur the expenditure of removal—the wages paid in the handicapped localities referred to being, in proportion, hardly high enough. The good practical miner, therefore, who can obtain work in any mining district, feels that his family is better off, and he can save more in other more advantageously situated parts of New South Wales than in Broken Hill or Cobar.

In addition to the actual mining, the several dredging plants now in use and under construction have already, and will, in the future, add considerably to the duties of Inspectors of mines. In addition to which, cyanide works have been erected, or are under erection, in nearly every mining centre of New South Wales; in some places three or four are in full work within a short distance of each other.

Very extensive machinery has been introduced and erected on several of the principal mines at Cobar. Foremost is that known as the Fort Bourke, or Cobar Gold-mines (Limited), which is under the able management of Mr. Thos. Buckland, Managing Director, Mr. Fox, Mining Manager, and Mr. A. Billingham, C.E., as principal engineer; the latter constructed the whole of the additional plant, under the personal supervision and direction of Mr. Buckland.

The shaft, which was down 250 feet, is 11 ft. x 4 ft. 6 in. over all, and is divided into three compartments; the two winding compartments are each 2 ft. 10 in. wide between skids; the ladder compartment, which also contains the air pipe, is 3 ft. 11 in. wide.

The shaft is closely timbered and centred with hardwood, 2½ inches in thickness. Poppet-heads are erected over the shaft, the centre of the pulley wheels being 42 ft. 6 in. above surface brace; at a height of 17 feet above the collar of shaft, a landing brace is constructed, with a tramway carried on trestles, leading therefrom for use during development.

Winding engine.—The winding-engine house, 30 x 20, is situated on the south side of shaft. The winding gear consists of a pair of horizontal engines, having 14 inch diameter cylinders, 24 inch stroke, and capable of raising a load of 2½ tons at a speed of 500 feet per minute; gearing, 4 to 1. The two winding drums are 7 feet in diameter, by 1 ft. 6 in. wide, loose on the shaft, and each fitted with clutch and brake gear. Indicators are fitted in position gear, with the drums showing position of cage in shaft.

Ore shoots—Grizzlies.—The ore is landed at the surface brace in trucks, and is conveyed on a tramway to the ore shoots, where it is tipped; the fines passing through the grizzlies into a lower shoot leading direct to the ore bins; the ore which requires breaking passes over the grizzlies into the ore crushers, and thence to the ore bins, the supply being regulated by adjustable doors at mouth of shoots. The sides of each grizzly are carried up to a height of 7 ft. 6 in. to form hoppers, in order to secure a regular supply.

Ore breakers.—Two of which have been erected over the ore bins, and are driven by belting direct from the engine shaft. The engine to drive said ore breakers is horizontal 12 inch cylinder and 16 inch stroke.

Ore bins.—These have a capacity of 100 tons, and are built throughout of ironbark timber, well bolted together. The bottom is divided into two parts, having shoots leading to iron discharge doors, each of which is provided with lever attachments for raising and lowering same. A tunnel is constructed immediately below the ore bins, through which the ore is conveyed in trucks over the tramway into the mill, where it is tipped into the ore storage bin over the battery.

Mill-house, covering battery, and engine-room, is 109 ft. long x 68 ft. wide.

Battery.—This consists of 100 head of stamps, erected in two lines of 50 each, placed back to back. The storage bins have a capacity of about 1,000 tons, and are fitted with adjustable hopper doors and self-feeders to batteries throughout.

The amalgamating tables are covered with electro-plated copper plates. The power for the battery is supplied by two 75-horse power Wheelock engines, each having a cylinder of 14 in. diameter with 3 ft. 6 in. stroke. The exhaust steam is conveyed to feed water-heaters, from which the water for use of boilers is taken. Taking the crushing stuff as it was at the end of 1898 as a sample, the capacity of the battery may be set down at about 300 tons per day.

Air-compressor and dynamos.—The building containing these is 45 ft. x 17 ft. 6 in., divided into two parts, the one at the southern end containing the engine and dynamo for generating electricity for lighting purposes (electric light being used both about the machinery and the mine), and the other the air-compressor. The dynamo is coupled direct to the engine shaft, and is capable of supplying 215 incandescent

BROKEN HILL "PROPRIETARY" SILVER MINE.  
(The "Open Cuts," looking North.)

THE BROKEN HILL PROPRIETARY "BLOCK 14" SILVER MINE.

incandescent lights of 16-candle power each. The air-compressor is compound, having high-pressure steam and air cylinders of 14 in. diameter, and low-pressure steam and air cylinder of 22 in. diameter; the stroke is 22 in. The air receiver is fixed on the northern side of the mill-house, and is 30 ft. in length and 5 ft. 6 in. diameter. The main air-pipe running from the air-receiver to the mine is about 400 ft. in length and 4 in. diameter, and is carried down the shaft to the 216 ft. level, and branches are laid to various levels as work proceeds, and also to the open cut for the purpose of supplying air to rock drills.

**Boiler-house.**—This building is 46 ft. x 25 ft. 6 in., and covers the new boiler-settings. The two boilers are of a Lancashire type, each being 30 ft. long x 8 ft. internal diameter, the combined horsepower being equal to 440 indicated, working pressure 120 per square inch. These boilers supply the whole of the steam required on the mine. Four old boilers in former use in the south side of the mill-house are shut off, but are ready for use in case of emergency. The chimney stack is 70 ft. in height and 4 ft. 1½ in. x 4 ft. 1½ in. inside at the top.

**Cyanide Plant.**—This is one of the largest, if not the largest, in New South Wales. The tailings, after leaving the battery, are conveyed by launders to a sump, from which they are lifted by a centrifugal pump, driven by a horizontal engine, 10 in. cylinder, 15 in. stroke, and delivered at a height of 36 ft. above suction into the spitzkasten. This spitzkasten is of steel, and has two divisions, each having a 3 in. outlet leading to the launder junction-box. The heaviest sand settles in the first compartment, the finer sands and slimes being carried on to the second division, where the remainder of the sand is separated, the slimes running away by an overflow which leads to the slimes launder. Above the top tier of leaching vats is an arrangement of steel launders radiating from the junction-box, from which point the flow is directed, and the inlets to the junction-box are fitted with adjustable doors by which the flow from the different divisions of the spitzkasten is regulated.

**Automatic Distributors.**—Each of the vats in the top tier is fitted with one of "Butter's" patent distributors which revolves automatically and lays the sand down evenly in the vat.

**Leaching Vats.**—The foundation of these vats are of cement concrete. The piers are of brickwork, three in number, each 164 feet in length, the outer ones being 3 ft. wide and the centre one 4 ft. in width.

The lower tier of vats rests upon ironbark joists, supported on heavy wall plates, and the top tier of vats is supported by a massive staging of ironbark timber which is carried by the piers below. The amount of the timber used in the staging alone is about 70,000 superficial feet.

There are ten (10) leaching vats each 30 ft. diameter and 8 ft. deep, built of steel throughout, and riveted in position; they are erected in two tiers; the five upper ones are provided with slime gates through which the water together with remaining slimes escapes into the slime launder which leads direct to the slimes dam. All the ten (10) vats are also provided with circular discharge doors, four (4) in the bottom of each vat. Below the vats, tramways are laid between the piers for the purpose of trucking away the residues after treatment.

Each vat is also fitted with a filter bottom of oregon pine, covered with a jute filter cloth and cocoanut matting.

**Extractor House.**—This building is 50 ft. in length by 40 ft. in width, with a compound truss louver roof. The floor is of concrete, finished with cement and graded to allow of all washings, leakages, &c., flowing into a sump. The extractor house also contains the distributor box, three extractor boxes each 18 ft. x 3 ft. 6 in. and 3 ft. deep, two mixing vats each 8 ft. diameter and 4 ft. deep, with all the piping, connections, valves, bye-passes leading to the solution vats, an improved zinc lathe, filter press, and two centrifugal pumps for pumping water to the spitzkasten supply tank and solutions into the vats. The required power is supplied by a horizontal engine 8 in. diameter cylinder and 15 stroke.

Furnace setting comprises one retort and two melting furnaces; the chimney is 30 ft. high. The solution vats are three in number, each 20 ft. in diameter by 10 ft. in depth, built of steel throughout, and carried on timber joists resting on concrete foundations.

It will be seen from the above description that this is one of the most perfect and extensive gold-saving plant in New South Wales.

The Cobar Mines (Limited), late Fort Bourke, deserves every possible and justifiable encouragement; they have undertaken at a very great cost to solve the problem whether the very low grade ores occurring in large deposits at Fort Bourke, Cobar, can be made to pay. It was at first thought that these deposits could be worked by crushing and amalgamation, which, however, proved a failure; however, undaunted at their first failure, they kept on moving by the erection of more extensive and improved machinery, intending to work their mine on only up-to-date principles in every particular. The cyanide plant alone cost £10,000. The company are already employing more than the complement of men needful to comply with the labour condition of the leases, and it is looked upon as a certainty that Mr. Thomas Buckland, their managing director, will put the company from a losing on to a dividend-paying footing. That even at the present juncture he has made the income overbalance the expenditure is information which I received from fairly good authority, and if such is correct, then the company must succeed when once work is in full swing and every part of their machinery fully employed.

It will be a great benefit, not only to the Cobar district but to the colony generally, if these low grade auriferous ores, which have been unsuccessfully tested by individual parties and small companies, can be made to pay by the introduction of large capital as is done by the Cobar Gold-mines (Limited), at Fort Bourke, Cobar.

At the time of my visiting the Cobar district the Chesney Mines were erecting extensive machinery; the Occidental Mine was enlarging their cyanide plant, and nearly every gold-mine along the line of auriferous belt was either at work improving their machinery or sinking new shafts. At the Great Cobar Copper Mine everything seemed to be progressing favourably.

If the indications at the end of the year can be taken as a criterion, then the year 1900 should be a prosperous one for the Cobar district.

I have, &c.,

W. H. J. SLEE, F.G.S.,  
Chief Inspector of Mines, &c.

The Under Secretary for Mines and Agriculture.

TABLE A.

TABLE A.

Showing Fatal, Serious, and Minor Accidents during year ending 31st December, 1899, which may be regarded as True Mining Accidents.

No	Date of Accident	Name of Mine	Locality	Number of Persons in each Accident	Names of Persons Killed or Injured			Mining for—	Occupation	On or Under Surface	Nature and cause of Injury or Death
					Killed	Serious Injuries	Minor Injuries				
1	4 Jan	Nymagee Kohnoor	Nymagee Parkes	1	George K Pringle		John Daniels	Copper Gold	Labourer Miner	On Under	Fall of earth—bruised leg

TABLE D.

FATAL Accidents, both on and under surface (exclusive of Broken Hill), during year ending 31st December, 1899, with verdicts of Coroners' Juries or Magisterial Inquiries.

Date.	Name.	Name of mine.	Locality.	Number of persons in each accident	Mining for—	Occupation.	On or under surface.	Remarks and Verdict.
4 Jan.	George K. Pringle	Kohinoor	Paikes	1	Gold	Miner	Under	Verdict—Accidentally drowned in sunp; no blame attached.
11 "	John Sharp	Mt Momsen	Wolumla ...	1	"	Mine-manager	"	Verdict—Death due to breathing foul air.
25 Feb.	Joseph Curnow	Great Cobar Co	Cobar	1	Copper	Miner	"	Verdict—Accidental death.
15 Mar.	George Carr	Black Coon	Yalgogrin	1	Gold	"	"	Verdict—Accidental death, no blame attachable to any person
17 "	John McKenny	South Burraga	Buriaga	1	Copper	"	"	Verdict—Accidental death, no one being to blame.
11 April	Alexander Taylor	Baker's C. Consols.	Hillgrove	2	Gold	"	"	Verdict—Accidental death, no blame attached to any one.
3 May	Ralph Dawson	Alluvial claim	Sofala	2	"	"	"	Verdict—Accidental death; caused by fall of earth.
18 "	Thos. Carpenter	"	Drake	1	"	"	"	Finding of accidental death was recorded.
9 June	Ah How	"	White Chiffs	1	Opal	"	"	"
10 "	Richard J. Coates	"	Oberon	1	Gold	"	"	"
15 "	Francis Hynes	Booth's Reward	Coolac	1	"	"	"	"
19 "	George Dalton	Great Cobar Co	Cobar	1	Copper	"	"	"
20 "	David Wilson	Eleanora	Hillgrove	1	Gold	"	"	Verdict—Accidental death; no blame attached to any one.
21 "	W. H. Martin	"	"	1	"	"	"	Verdict—Death due to falling down an unsafe winze.
4 July	James Hinder	Webb's	Emmaville	1	Silver	"	"	Verdict of accidental death was recorded.
8 Sept.	Sing Mow	Alluvial claim	Nerrigundah	1	Gold	"	"	Verdict—Death due to falling into hot-water well.
9 "	D. H. Southon	Prince of Wales	Gundagai	1	"	"	"	Verdict of accidental death was recorded.
30 "	John Clark	Alluvial claim	Tuena	1	"	"	"	Verdict—Accidental, no blame attachable to any one.
14 Oct.	Robt Pritchard	Klondyke	Wyalong	1	"	"	"	Verdict—Accidental death; no blame attached to anyone.
18 "	Robt Pamment	Gibraltar	Adelong	1	"	"	"	Verdict—Accidental, no one being to blame.
3 Nov.	John Taylor	Proprietary	Peak Hill	1	"	"	"	Verdict—Accidental; no blame attached to any one.
18 "	John Muller	Alluvial claim	Sofala	1	"	"	"	Verdict of accidental death was recorded.
23 Dec.	John Harris	"	Nine mile	1	Tin	"	"	"

TABLE E.

FATAL Accidents, both on and under surface, Broken Hill District, during year ending 31st December, 1899.

Date.	Name.	Name of Mine.	Number of persons in each accident	Occupation	On or under surface.	Remarks and Verdict.
21 Feb.	John Fenotti	Block 12	1	Miner	Under	Jury discharged without returning verdict.
8 March.	William R. Reilly	B. H. Proprietary	1	"	"	Verdict—Accidental death, no blame being attributable.
29 "	August A. Astall	"	1	"	"	Verdict—Accidental, no blame attached to anyone.
1 May	August Welch	"	1	"	"	Verdict—Accidental, no blame being attachable.
2 "	Matthew Gardiner	"	1	"	"	Verdict—Accidental death.
8 June	Edward W. Wood	"	1	"	"	Verdict—Accidental death; no blame being attachable.
21 "	James Bruff	Central	1	"	"	Verdict—Accidental death.
23 July	Patrick Quigley	Block 10	4	"	"	Verdict—Killed by fall of earth; no evidence to show that blame was attachable to any person.
28 "	Charles Brown	"	4	"	"	Verdict—Accidental, no blame attachable.
28 "	James Parkinson	B. H. Proprietary	1	"	"	"
21 Aug.	Thomas F. Truran	Junction	1	"	"	"
7 Oct.	John Cocks	"	1	"	"	Verdict of accidental death was recorded.
19 "	Edward Murray	B. H. Proprietary	1	"	"	"
30 "	William John Phillips	B. H. North	1	"	"	"

TABLE F.  
SHOWING Fatal, Serious, and Minor Accidents which occurred in Broken Hill Open Cuts during 1899.

Date	Fatal	Serious	Minor
7 February	A. Welch	T. Rogers	
20 "		S Spalding	
1 May			
19 August			W Waters.
29 "			J Philpott
21 September			T Graham
26 "		J Anderson	
23 October		S Trevenna	
22 November			J Johnson
14 December		Jas Crowley	

TABLE G.  
MINOR accidents under surface, Broken Hill District, during year ending 31st December, 1899

Date	Name	Name of Mine	Number of persons in each accident	Occupation	Remarks and Verdict
7 Jan	Geo Bartholomew	Central	1	Trucker	Injured arm by fall of stone
14 "	Ernest Graham		1	Miner	Kell down shoot
20 "	W E Gardner	B H Proprietary	2	Surveyor	Fall of ore
4 Feb	George Maier	"	1	Miner	Trunk capsized
11 "	Joseph Shore	"	1	"	Fell and lacerated hand
14 "	James Francis	British "	1	"	Injured thigh while barring down rock.
17 "	Owen O Neill	Block 10	1	"	Fall of stone—injured ankle
7 Mar	John Sheppard	Central	1	"	Staging fell
10 "	Arthur White	Block 14	1	"	Scalp wound through fall of ore
21 "	E Merrett	B H North	1	"	Injured hand through fall of ore
26 "	J Richards	Junction North	1	"	Fell whilst working
5 April	Wm Solomon	B H Proprietary	1	"	Struck by ore coming down shoot
6 "	Chas Johnson	Central	1	"	Fell off timber
7 "	H Watson	"	1	Trucker	Struck by falling stone
2 May	Samuel Lawn	B H Proprietary	2	Miner	Bruised by fall of ore
2 "	William Kitto	"	2	"	Scalp wounded by fall of ore
23 "	William Martin	"	1	"	Leg injured by fall of stone
27 "	A Anderson	B H South	1	"	Injured by flying stones
9 June	Joseph Raby	Central	1	"	Bruised by falling
12 "	Thomas Miles	"	1	"	Cut foot by rolling ore
12 "	Charles Mahon	"	1	"	Scalp wound through cable breaking.
29 "	John Delbridge	B H Proprietary	1	Trucker	Truck injured foot
3 July	David McOrrie	Block 14	1	"	Fell into pass
2 "	J Wishart	Junction North	1	Labourer	Struck by timber
27 "	John Davies	B H Proprietary	1	Miner	Struck by truck
28 "	Arch Anderson	"	1	"	Injured in cage
5 Aug	M Bviant	Central	1	"	Struck by a drill
11 "	Joseph Snell	Block 10	2	"	Bruised by fall of ground
11 "	William Levin	"	2	"	" "
11 "	Samuel Virgin	"	2	"	" "
18 "	Robert Lee	B H Proprietary	1	"	Abrasions—fall of ground
19 "	J Andrews	Central	1	"	Struck by falling stone
19 "	William Walters	B H Proprietary	1	Labourer	Injured leg with truck wheel
21 "	Sydney Pearse	Central	1	Miner	Scalp wound—fall of ground
29 "	J Philpott	B H Proprietary	1	Trucker	Stone rolled on foot
30 "	Thomas Holbs	"	1	Miner	Fall of stone—injured back
1 Sept	Ed Quntrell	South	1	"	Struck by bucket
21 "	Thomas Graham	B H Proprietary	1	"	Struck by falling stone
29 "	Benjamin Wearne	Junction	2	"	Returned to unexploded blast
29 "	Joseph Wearne	"	2	"	"
3 Oct	William Rutter	British	1	"	Struck in eve by flying stone
16 Nov	R Fidler	"	1	"	Fell into pass
22 "	George Mitchell	Central	1	Trucker	Foot injured by truck
22 "	John Johnson	B H Proprietary	1	Miner	Bruised by fall of ground
28 "	Isaac Smith	"	1	"	Crushed thumb with drill
16 Dec	Chas Ranford	"	1	"	Fell and injured back
29 "	Chas Brooke	"	1	"	Temporarily overcome by fumes

TABLE H.  
SERIOUS Accidents under surface, Broken Hill District, during year ending 31st December, 1899.

Date	Name	Name of Mine	Number of persons in each accident	Occupation	Remarks
20 Jan	Charles Pound	B H Proprietary	2	Surveyors' Assistant	Bruised by fall of ore
7 Feb	Thomas Rogers	"	1	Trucker	Injured foot by fall of stone
20 "	Samuel Spalding	"	1	Powder Boy	Flying stone—broken thigh
1 Mar	S Thomas	Junction	1	Miner	Slab fell—broken collar bone
26 "	George Hobbs	Block 14	1	Carpenter	Fell while working in shaft
26 "	James Duffies	B H Proprietary	1	Labourer	Cage over run—broken leg
27 "	R J Benger	Block 10	1	Miner	Flying stone—abdominal injuries
6 April	Joseph Martin	B H South	1	"	Struck by falling stone
3 May	John Casey	Central	1	"	Fell off timber—injured back
18 "	Thos Humphreys	"	1	"	Fell through floors—fractured skull
26 "	Wm Wright	B H Proprietary	1	"	Machine slipped and injured foot,
3 July	William Bray	South	1	"	Splinter from hammer injured sight
28 "	George Holmes	Block 10	4	"	Crushed by fall of ground
28 "	Elias Nankivell	"	4	"	"
4 Aug	William Rear	B H Proprietary	1	"	Fall of rock—injured head &c
14 Sept	Louis Tremanzia	B H North	1	"	Bruised through falling down pass
26 "	John Andrews	B H Proprietary	1	"	Injured by runaway truck
23 Oct	Samuel Trevenna	"	1	"	Struck by flying stones
27 "	Alfred Curtis	Central	1	"	Fall of stone—broken leg
3 Nov	A Bullers	B H Proprietary	1	"	Fall of ground—broken wrist
6 "	C Smith	Block 14	1	Trucker	Strained back—lifting truck
13 "	Arthur Gilfillan	Junction	1	Miner	Fell and broke leg
16 "	Wm Murren	Block 10	1	"	Blast exploded whilst returning to examine
14 Dec	Jas Crowley	Junction North	1	"	Premature explosion of powder

TABLE I.  
SERIOUS Accidents on surface, Broken Hill District, during year ending 31st December, 1899.

Date.	Name.	Name of Mine.	Number of persons in each accident.	Occupation.	Remarks and Verdict.
28 Jan. ..	Isaac Burgan .....	British .....	1	Mill hand .....	Caught in machinery.
29 April. .	G. McKenzie .....	B.H. Proprietary .....	1	Labourer .....	Run over by trolley.
24 May ..	Thos. Waters .....	" .....	1	Carpenter .....	Struck by timber.
4 Aug. .	C. Bonnard .....	" .....	1	Miner .....	Burned by hot ore.
11 Oct. .	V. Holland .....	" .....	1	Trucker .....	Thigh broken by waggon.
4 Dec. .	George Smith .....	Block 10 .....	1	Mill hand .....	Leg broken through wheel breaking.
6 " ..	George Blake .....	B.H. Proprietary .....	1	Blacksmith ..	Foot injured by horse.

TABLE J.  
MINOR Accidents on surface, Broken Hill District, during year ending 31st December, 1899.

Date.	Name.	Name of Mine.	Number of persons in each accident.	Occupation.	Remarks and Verdict.
14 Feb. .	Henry Jones .....	B.H. Proprietary .....	1	Trucker .....	Detonator exploded ; injured hand.
7 Mar. .	T. R. Reynolds .....	" .....	1	Labourer .....	Fell off stage.
8 " ..	Wm. Marjorm .....	" .....	1	Mill hand .....	Caught in belting.
19 " ..	Wm. Kilmartin .....	" .....	1	" .....	Foot crushed under truck wheel.
13 April. .	J. Nelson .....	" .....	1	Labourer .....	Injured while handling machinery.
4 May ..	John Major .....	Junction .....	1	Mill hand .....	Injured hand with circular saw.
5 " ..	William Hills .....	" North .....	1	Machine hand. .	Fell into pit ; scalp wound.
19 " ..	Charles Burt .....	" .....	1	Mill hand .....	Injured foot with truck.
2 June .	Wm. Raynor .....	B.H. Proprietary .....	1	Labourer .....	Struck by pick.
6 " ..	W. James .....	" .....	1	Miner .....	Accidental explosion of powder.
13 Aug. .	Chas. Smith .....	" .....	1	Mill hand .....	Burned by hot ore.
13 Sept. .	Thos. J. Hoare .....	British .....	1	Sawyer .....	Fingers severed by circular saw.
22 " ..	Frank Carroll .....	B.H. Proprietary .....	1	Trucker .....	Injured arm with rope.
10 Oct. .	Alfred Bertram .....	" .....	1	" .....	Jambed by truck.
1 Nov. .	J. McGubbin .....	" .....	1	Mill hand .....	Truck injured ankle.
2 " ..	Thos. Whetstone .....	" .....	1	Engine-driver..	Fingers severed by machinery.

TABLE K.  
A. Comparison of Accidents recorded during the years 1896, 1897, 1898, and 1899.  
Total from all causes for the whole Colony.

1896	...	...	...	...	...	...	...	...	123
1897	...	...	...	...	...	...	...	...	112
1898	...	...	...	...	...	...	...	...	147
1899	...	...	...	...	...	...	...	...	192

As follows :—				Fatal.	Serious.	Minor.			
1896	...	...	...	35	36	52	=	123	
1897	...	...	...	35	41	36	=	112	
1898	...	...	...	35	27	85	=	147	
1899	...	...	...	39	57	96	=	192	

Divided into—					Under Surface Accidents.				
				Fatal.	Serious.	Minor.			
1896	...	...	...	32	26	31	=	89	
1897	...	...	...	29	30	26	=	85	
1898	...	...	...	31	19	69	=	119	
1899	...	...	...	37	45	71	=	153	

And into—					Surface Accidents.				
				Fatal.	Serious.	Minor.			
1896	...	...	...	3	10	21	=	34	
1897	...	...	...	6	11	10	=	27	
1898	...	...	...	4	8	16	=	28	
1899	...	...	...	2	12	25	=	39	

Broken Hill only (but included in above).  
Total from all Causes.

1896	...	...	...	...	...	...	...	...	60
1897	...	...	...	...	...	...	...	...	61
1898	...	...	...	...	...	...	...	...	90
1899	...	...	...	...	...	...	...	...	108

Divided into—					Under Surface Accidents.

Report on Tin-mining and Silver-mining in the Emmaville District.

Sir, Emmaville, 17 March, 1899.

Having for the time being completed my official duties in the district, I have the honor to inform you that, owing to the present high price of tin, quite an impetus has been given to the tin-mining industry here. Nevertheless the effects of the drought, and consequent scarcity of water, is greatly retarding even fair progress.

Nothing is being done at Kangaroo Flat; the prospecting party, Messrs. Thomas Chandler & Co., were beaten by a heavy flow of underground water, but they hope soon to start again and, either with pumping appliances or by driving a tunnel, to drain the principal part of the water, and so enable the deepest part of the channel to be reached.

In lode-mining the principal mine is the "Ottery," situated about 2 miles from the Tent Hill Smelting Works. This contains the largest and so far the most permanent tin lode discovered and worked in the district, or even in New South Wales. The lode is of great width, but of low percentage, yet Mr. John Reid, of Tenterfield, the general manager and director of the Ottery Company, by systematic and economical working, makes 2 or 3 per cent. yield payable returns.

The mine is now about 250 feet in depth (and has paid from the surface), hence it is the deepest tin-lode mine in New South Wales. At present the mine employs about thirty-five persons, exclusive of those employed at the crushing, concentrating, and smelting works at Tent Hill. An accident occurred in the mine during my stay here, of which I have already separately reported.

Webb's Silver-mine.—This mine is situated about 9 miles from Emmaville, and is owned by an English company known as the White Rock Silver Mines (Limited), of which Mr. Uriah Dudley is the general manager and Captain John C. Dave mining manager.

No doubt this is the principal and most important mine at present developing in the Emmaville or the Vegetable Creek district. About 100 persons are now employed, which number will in a short time be considerably increased.

There are at present three separate known lodes, which apparently join into one another on the northern part of the land.

The main shaft on the middle lode is 656 feet in depth; a level has been opened at 650 feet, leaving 6 feet of a well-hole. But so far there is only a very little dripping of water—barely noticeable.

Several levels have been opened and are under development, namely, the 650-foot, 600-foot, 550-foot, and 440-foot.

The lowest or 650-foot level is being driven north and south, and the extension of the other levels are also being proceeded with—the whole of said levels being on payable ore, and of higher quality than the outcrop on the surface, which contained more lead (galena), also payable.

The vein in the middle lode is very persistent in its regular continuity, but at times varies in width from 1 to 2 inches up to 16 feet. This variation in width appears greater on account of the main workings being near one of the junctions of the three main lodes above referred to, inside of which the angle of pressure has shattered the wedges of ground, completely misleading the earlier or former workers as to where the main lode really occurred and should be looked for.

The main chute of ore now being worked on the lower level had but a small and insignificant outcrop. Numerous similar outcrops are known to exist, some of which are now being developed. There is, therefore, every prospect that the number of employees will be considerably increased in connection with these new developments.

The

The latest southern workings have disclosed ore that was not known to exist, or even anticipated to exist, in the old or former Company's time. All payable ore so far discovered is in distinct and well-defined chutes, of which three different ones are now opened; all are dipping southerly. The north chute averages about 60 feet, the middle chute 80 feet, and the south chute 70 feet in length.

Owing to the very dry season work had practically to be stopped for some months, as the milling could not be kept going.

Over 1,000 tons of ore is lying broken underground, all of which is supposed to be of high average percentage of silver, with some gold, lead, and copper also carried.

The present concentrating mill treats about 3 tons per hour through hand-jigging; but this plan is now being superseded by machine jigs, and extra crushing capacity to 15 tons per hour, hence the mine equipment is also enlarged to meet the demand.

There are about 20,000 tons of ore on the surface ready for the mill, in addition to which large bodies of ore are being opened out upon in the mine. Two main shafts are now being sunk, and in the course of about six months the new milling plant will be at work. The present output, so far maintained, is between 20 to 30 tons of concentrates per week, which is regularly sent to the Dapto Smelting Works.

Taking everything into consideration, the prospects of this mine are very good. This proves beyond doubt that New South Wales has valuable mineral deposits which only require capital to develop, and it is to be hoped that the Webb's Silver-mine Company will be highly rewarded for their pluck and perseverance in thus developing the mine and placing it on a satisfactory and payable footing.

No doubt the high qualification, ability, and practical knowledge of Mr. Uriah Dudley, the general manager, and Captain John C. Dawe, the mining manager, and their systematic and economical management and working, has had a great deal to do with the present satisfactory prospects of the Webb's Silver-mine.

The Under Secretary for Mines and Agriculture.

I have, &c.,

W. H. J. SLEE, F.G.S.,  
Chief Inspector of Mines.

#### Report on Tin-mining at the Nine-mile, Deepwater.

Sir,

Deepwater, 17 March, 1899.

Having for the present completed my official duties at the Nine-mile, in the Deepwater district, I have the honor to inform you that the rise in the price of tin has stimulated prospectors in all directions to seek for fresh deposits of tin, and those who own mines which formerly would hardly yield working expenses are now reaping a reward for their energy and perseverance. New arrivals are frequent, and should heavy rains fall in the district a large increase in the output of tin may be looked forward to. A very noticeable circumstance in this district is that during the dry season the Chinese population has greatly decreased, whereas the white population stood stationary, but since the rise in the price of tin the latter has increased. All seem to be in high spirits, and idlers are a rarity. Several miners are now working on narrow tin veins or lodes, which, so far, have only been followed in short chutes to a very shallow depth, although there is no tangible reason why these should not prove to be permanent and to be carrying payable ore deposits to a great depth.

Efforts are now being made by miners, and backed up by the principal inhabitants of the district, to prospect the basaltic country for payable alluvial stanniferous deposits. Hitherto the attempts made have proved failures, owing to the small shafts and primitive appliances which prevented miners from bottoming, as they could not cope with the hard basalt and the heavy water-soaked drifts.

Should present endeavours be successful, of which there seems but very little doubt as the indications are very promising, and provided said prospecting operations are carried on in a systematic and economical manner, *i.e.*, with larger shafts and steam pumping-power, then the Deepwater and Nine-mile district is likely to be placed in the first rank of tin-producing districts.

Numbers of parties are also prospecting in the district for wolfram, which section of the mining industry is also coming to the front.

The Under Secretary for Mines and Agriculture.

I have, &c.,

W. H. J. SLEE, F.G.S.,  
Chief Inspector of Mines.

#### Mr. Inspector Milne's Annual Report for 1899.

Sir,

Cobar, 20 January, 1900.

I have the honor to submit my annual report for the year 1899.

With the exception of three months relieving Inspector Hebbard at Broken Hill, I have been continuously engaged inspecting the mines in Cobar, Gundabooka, Bald Hills, Restdown, Mount Drysdale, Mount Allen, Mount Hope, Nymagee, Gilgunnia, Bobadah, and Melrose districts.

I have also reported on a number of sites in the above districts for which aid was asked from the Prospecting Vote.

Owing to the continuous drought during the first half of the year nearly all the larger mines in the districts were compelled to shut down, and in the outlying districts work has only been intermittent, and prospecting almost a dead letter.

Early in the year a 5-stamp mill was erected at Restdown by a Cobar syndicate, and a few tons of quartz crushed for very satisfactory returns.

Since that very little work has been done, and what stone has been crushed did not come up to expectation.

This locality up to the present time has only been worked in a half-hearted manner, and is well worth the attention of energetic prospectors.

The country rock (slate) is fairly soft, the veins are small, and occur in lenticular blocks, with occasional rich short chutes of gold. There is a good supply of water, and requisites are easily obtained from Cobar.

At Boppy Mountain the Anglo-Australian Syndicate have opened up their mine in a most systematic manner, proving the extent of the reef both in length and depth. The lode runs from 8 to 30 feet wide, and I was informed by the manager that 200 tons taken promiscuously from the heap yielded 16 dwt. per ton.

This mine has recently been floated on the English market, and will in the coming year be equipped with suitable machinery for operations on a large scale.

The adjoining claim, Budd and party, is a promising one on the same line of reef, but the prospectors have been seriously hampered in opening up their mine owing to want of capital.

Work at the Nymagee Copper-mine has been steadily pushed ahead underground, and some good bunches of sulphide ore opened up in the south end of the mine at the lower levels, and in the north end fresh bunches of carbonates and grey ore are being discovered. Now that a plentiful supply of water is on hand the returns should be considerably ahead of those for some time past.

The same system of securing the underground workings is in vogue as described in my previous reports, the depleted stopes being kept well filled from the open cutting on the surface.

A hot-air furnace has been added to the water-jackets, causing a good saving in the consumption of coke. A saving in the cost of carriage from the railway to the mine has also been made by the addition of a traction engine, which draws a load of 20 tons at the rate of 7 miles an hour in dry weather, making nearly one-half saving in the cost of carriage by teams.

In the North Nymagee Mine prospecting has been steadily pushed on. Small bunches of rich ore have been found; but so far no large bodies of ore or anything of permanent character have been discovered.

The returns from Gilgunnia are very satisfactory, Her Dream contributing very strongly to the yield, which is about the highest since the opening of the field.

The returns from Seigel and Sons, Osmetti and party, and others, although the tonnage is small for the year, are highly satisfactory.

It seems a pity to see a battery like that at Gilgunnia only kept running about two months in the year.

The total number of tons of stone crushed is 364, yielding 1,182 oz. of gold.

At Mount Allen the old heap of tailings has been treated by cyanide, leaving a balance in hand, which is to be used in further developing the mine. A start is now made at the 115-foot level, driving on a small pyrites vein on the east side of the shaft. It is intended to continue sinking the main shaft in the new year.

Hill and Son, on the Dromedary, discovered a very promising copper lode on the west slope of the hill, the outcrop showing rich veins of carbonate; but, like most prospectors, they are anxious to sell, and almost immediately after the discovery placed the mine under offer to a Cobar syndicate, who again, instead of opening up and prospecting said discovery, put it on the market at a very much increased rate, and the mine thus stood for some months in its virgin state. The mine has again fallen back to Hill and Son, and it is to be hoped they will now do some prospecting, so as to prove that there is something under the outcrop to warrant the expenditure of capital.

In the New Mount Hope Mine no work was done for the first three months of the year, advantage of the enforced idleness being taken in repairing the old plant and adding a Hancock jigger capable of treating 25 tons of ore a day, which has so far benefited the mine to the extent of doubling the output of copper.

The same system of fossicking and rooting about underground, as in the past years, is still in vogue, and unless the company make some arrangement for systematically developing the deeper levels, and proving the sulphides which must exist below the large bunches of carbonates which have been so long exploited, it is only a question of time when this mine, which should rank as one of the principal producers of copper in the Colony, will have to shut down. In the primitive method on which the mine has been worked 1,224 tons of ore have been raised, yielding 662 tons concentrates, which produced 103 tons 14 cwt. 1 qr. 5 lb. of copper—or, an average of 15.6 per cent. of copper, per centate of concentrates.

The Great Central Mine, after five months of enforced idleness, raised 1,000 tons of ore, yielding 50 tons copper.

The prospects of this mine are now much better than for some time past.

A strong bunch of sulphides showing in Hodge's Shaft, and going down strong underfoot. This and the bodies of carbonates showing in other parts of the mine indicate a decided improvement in the future of this mine.

On the south end of the mine a large lode formation, impregnated with small veins of grey ore, could be cheaply mined by open cutting, and may give handsome returns if worked on a large scale.

To do this a powerful concentrating mill would have to be erected, and a suitable tank for conserving water.

This, like the Mount Hope Mine, is worked by tributers.

The Overflow Mine has again had a bad year.

A complete plant for crushing and cyanide has failed to give any returns, owing to the very slimy nature of the ore. It was first tried as a dry-crusher and direct cyanidation, but a satisfactory percolation could not be obtained.

Then a system of wet-crushing and amalgamation, after which the slimes were separated by a spitzkasten and the pulp cyanided. This also failing to give payable results, the principal portion of the gold still being in the slimes: The Krupp mill is said to be unsuccessful as a wet-crusher.

It was then decided on smelting the ore, and an Oswald brick furnace built and smelting began, but only for a short period, it being proved that bricks would not stand the heat, but is said to have run long enough to prove that smelting was the better means of handling this ore, and, as it was only erected for experimental purposes, was not expected to last long.

A return was again made to crushing and cyanide, which appears strange after proving smelting the proper means of treatment.

All this experimenting ran away with the principal and richest chutes of gossan, leaving the mine in such a state that now a course of prospecting and development will have to be gone into. For this purpose, a new issue of shares was made to raise capital, and a start has been made to further prospect Booth's Shaft, in the bottom of which there are small veins of yellow copper ore.

On the Yellow Mountain several prospectors are working some very promising shows.

This locality has a most promising appearance, and by systematic prospecting valuable lodes of copper, silver, and gold may be discovered in the near future.

*Cobar*

COBAR GOLD MINES, LTD. (FORT BOURKE).  
(Open Cut.)

*Cobar District.*

On the C.S.A. Mine a lot of prospecting has been done. The main shaft has been sunk to the depth of 300 feet, and at that level cross-cut about 80 feet, exposing a large body of friable ore carrying silver and gold.

On the Wild Wave prospecting has again been resumed.

In the Great Cobar Copper-mine the same system of work continues as described in my previous reports, and the same satisfactory results obtained.

During the year the syndicate have been actively developing the mine, and in sinking and driving large bodies of ore have been opened up.

Both Barton's and the new shaft are now sunk to the depth of 108 fathoms, and connected by drive at the 90-fathom level with winzes sunk at convenient intervals. The bodies of ore showing strong under foot augurs well for the future prosperity of this mine.

The hot-blast furnace mentioned in my last year's report has been completed, and so satisfactory has it been that furnaces are now being erected to supply all the plant with hot-air blasts.

It might be interesting to note the amount of ore raised and smelted, timber and filling used in the depleted stopes, also amount of sinking and driving for the year.

Ore raised and smelted	...	...	...	...	122,829 tons.
Filling depleted stopes	...	...	...	...	114,639 "
Mine timber	...	...	...	...	896 "
Driving	...	...	...	...	1,194 feet.
Sinking	...	...	...	...	942 "

The prospects of the mine are even better now than in the past.

The Fort Bourke Mine.—The first nine months of the year all work was centred in remodelling the old and erecting new machinery and in development work underground.

The main shaft is 216 feet deep, 11 ft. x 4 ft. 6 in., divided into three compartments, secured with close timber, ironbark, 9 in. x 2½ in. The deepest working level 116 feet, where a large chamber is cut out and the lode driven on for a distance 554 feet north, close timbered with sets and laths for a distance of 467 feet, the level being 7 ft. x 7 ft. in the clear, with double truck road.

Quartz shoots 10 feet apart on alternate sides of the level, add materially to the convenience of handling the ore in the stopes; every 60 feet a travelling road is added to the pass; all the stoping is done above this level, the lode averaging 30 feet in width.

The shaft is well equipped with headgear of ironbark, and a suitable engine for winding; double cylinder 14 inch, stroke 24 inch, geared four to one, hand-brake on drums, drums 7 ft. x 1 ft. 6 in., capable of winding 500 feet per minute.

The ore broken in the stopes and open cut falls to the 116 foot level, where it is trucked to the shaft, and to surface, thence to the rock-breakers, a distance of 50 feet, where it passes over a grizzly, the fines passing into a hopper below, and stones requiring breaking on to rock-breakers, and thence to the hopper above the tunnel-level. From this it is trucked to the mill, and is fed automatically by Challenge feeders to the mortars.

The mill is 100 stamps, by Fraser and Chalmer's, being two separate mills of 50 stamps, standing back to back, each ten head being independent. The stamps weigh 800 lb., and are driven at ninety drops per minute, 5-inch drop, crushing 250 tons every twenty-four hours. Driven by two separate engines, each 150 h.p., made by Whitelock, fitted with Scott and O'Neill patent cut-off.

The pulp, after passing through the mortars, runs over amalgamating plates and thence to a sump-hole, from which it is raised 40 feet, by a 5-in. centrifugal pump, to the spitzkastens, where the slimes are separated and run away to slime-tanks for future operations.

The sand passing through launders to the distributors over the cyanide vats, of which there is a double row of five top and bottom, 30 ft. x 8 ft., treating 1,000 tons per week.

The solution passes on to the extractor-house, through a distributor and three extractor-boxes.

In the extractor-house, besides the distributor and extractor-boxes, are two mixing vats, zinc lathe filter press, furnace, testing appliances, and four centrifugal pumps, 4-inch delivery, for pumping the solution to the vats and water to the spitzkasten.

The whole plant and surface of the mine is fitted up with electric light.

The air-compressor, for supplying air to the drills in the open cutting and underground, is by the Rand Rock-drill Company, compound, capable of driving twenty drills; the whole plant being steamed by two Lancashire boilers, 8 feet diameter, 3 ft. 3 in. flues, 30 feet long.

This is one of the largest and most complete plants in the Colony, and every possible advantage has been taken for the economical handling of the ore through all its courses.

The Chesney Mine has also spent the principal part of the year in work—developing the mine underground, and erecting machinery; the main shaft cut down, the dimensions of which is now 15 ft. x 4 ft. 6 in., divided into three compartments, close-timbered with ironbark.

The poppet legs are of Oregon pine, 70 feet high, with a brace 35 feet above the surface, from which is a tramline extending to the mill, a distance of 180 feet.

The ore is trucked direct from the shaft to a hopper outside the mill, from which it passes through a rock-breaker and broken to 2½-inch gauge, thence through Krom rolls and a trommel of four holes to the inch, then raised by a Raff wheel, and through the rolls again to the jigger. The coarser skimpings are again raised by a second wheel passed on to a smaller pair of rolls, then by an elevator to the second jigger. The jiggers are by Hancock, and capable of treating 33 tons every eight hours.

It is intended that the slimes shall pass over buddles, which are in course of erection. The ore is now dressed to 12 per cent. The concentrating plant is driven by a 100-horse-power steam-engine with rope gear, alongside of which stands a compound air-compressor capable of driving 15 drills. The engine and compressor made by Thompson & Co., Castlemaine.

The prospects of the mine underground are good, the lode being about 30 feet wide, and although not solid bodies, there are fairly large bunches of ore and small veins of rich yellow ore all through the lode formation.

Mount

Mount Pleasant Mine, after a long period of suspension, has been opened by the Cobar Syndicate on tribute. Since its opening work has been steadily pushed on, the main shaft being sunk, in the course of which some rich bunches of carbonates and grey ore are occasionally met with, leading one to believe that there is a future for this mine, which now has a chance of development.

The Young Australian only resumed work underground in the last half of the year owing to the drought, during which time surface improvements were extensively carried on—erecting new poppet-heads, winding-engine, and boiler.

Since resuming work (although the mill has been running most of the time) it can only be reckoned as prospecting, and the returns for the coming year should be materially increased.

The Great Western Mine has done very little mining during the year. A slight alteration has been made to the plant by re-erecting a small cyanide plant just down below the tailings from where it was removed, and it now stands midway between the mill and the tailings heap.

The sinking of the new shaft has been abandoned, and the old shaft is now being cut down and timbered, as it is now intended to work the large body of low-grade ore showing.

This mine, if worked on a large scale on economical lines, should give profitable returns for some years to come.

The Occidental, after an enforced idleness owing to the drought, resumed work in June, and has been run consistently ever since. Advantage was taken of the dry time by enlarging the dam for the conservation of water, adding to the cyanide plant, and also in doing some dead work in the mine. The mine is showing strong bodies of ore, and in the winzes sunk good-grade ore proved to be going down underfoot. The future prosperity of this mine is assured if carried on on the same careful lines as at present. A new 10-stamps have been added to the plant, so now thirty stamps are falling, which, in addition to the tailings every week, will nearly keep the cyanide plant going. Gold won from both sources, 3,703 oz.

The Great Peak Mine has not done as well as might have been expected, the owners appearing to be satisfied to continue on in the same old fossicking system as in previous years, no attempt being made to open up the mine systematically; still it has paid its way, if not more.

The Conqueror has only, like its neighbours, worked intermittently, but the results have been very satisfactory, and, to all appearances, likely to continue so for some time to come.

On this end of the field, late in year, a new find of silver was opened, the lode showing about 15 feet wide, assaying 50 oz. per ton silver and 5 dwt. gold, but up to the present so little work has been done it is impossible to say anything as to permanency. It is, to all appearances, the same line as that on which Barrass and party obtained such a rich bunch some years back.

Towards the close of the year a rich chute of gold was struck in the Drysdale Mine at the 275-foot level on the east side of the shaft in the south drive.

The vein when first opened was from 4 inches to 6 inches thick, showing fair prospects, and, by driving on about 30 feet, opened out to 18 inches in thickness, with veins of almost pure gold at intervals across the face. Up to the end of the year, 96 tons of ore from the chute yielded 267 oz. of gold.

The prospects of the Eldorado Mine has been considerably enhanced by this find, which is to all appearances strengthening as it nears their boundary.

At the present time a fairly good chute of ore is being worked in the south end of the open-cut near the surface, and the rich chute of gold lately discovered in the Drysdale Mine at the 275-foot level is near the Eldorado boundary.

This rich discovery will probably put fresh life in prospecting the Drysdale district.

At Gundabooka only two parties are prospecting, but so far without any good results.

On the Bald Hills small rich veins are occasionally met, but they have so far not yielded payable returns.

Open-cuts or Quarries.—This class of work on the Great Cobar Copper Mine, Fort Bourke, and Occidental Mines is beginning to assume an extensive appearance, fairly good ore being raised from them, after which the sides are shot away for mullock to fill the depleted stopes below, and make a safe batter for the sides of the cutting.

Machinery has been very considerably added to the district during the year. Now all the larger mines have increased the power on their air-compressors, and winches below are driven by compressed air; also increased drills being added.

There is now in the district seven air-compressors, capable of driving eighty-two rock-drills, necessitating an equally increased steam-power on the mines.

In this district there is a collection of boilers of every description and make, but of late a leaning has been made towards Lancashire boilers, both the new plants erected being supplied with this class.

Owing to the varied nature and the age of some of the boilers, extreme care has been taken to see that the regulations in regard to testing are carefully carried out; every precaution has also been taken in regard to the safety of other machinery.

Lead-poisoning.—Two cases have been reported during the year, both coming from the North Nymagee Mine, where in one portion of the mine the lode is heavily charged with carbonates of lead.

Prospects of the district are decidedly good, but the returns in all mines, except the Great Cobar Copper Mine, will be only for the last half of the year, and in some instances only for two or three months. This is owing to the extended drought which prevailed throughout the Western District.

Taking everything into consideration, the present indications of the mining industry in the Cobar District has a most healthy appearance.

I have, &c.,

DAVID MILNE,

The Chief Inspector of Mines, Department of Mines, Sydney.

Inspector of Mines.

"THE CENTRAL" BROKEN HILL SILVER MINE (1886).

"THE CENTRAL" BROKEN HILL SILVER MINE.  
(Recent.)

## Mr. Inspector Hebbard's Annual Report.

Sir,

Broken Hill, 6 January, 1900.

I have the honor to present my Annual Report for the year 1899, as follows:—

During the year I have been occupied in constant and frequent inspections of the mines on the Broken Hill line of lode and the smaller mines of the surrounding district, except during my holiday, when Mr. Inspector Milne was in charge of the district; I have also visited and reported on numerous claims in the out-lying parts, to prospect which aid had been asked from the Prospecting Vote.

The district generally.—Outside of the Broken Hill line of lode the efforts at resuscitating the small mines have in a great many instances proved failures, partly from want of capital and partly also through the owners' desire to sell at an exorbitant price instead of putting their own energies into the development of the claims. I feel sure, however, that many of the claims now lying unoccupied will in the future well repay the labour of small parties of energetic miners.

A good deal of activity was manifest in the earlier part of the year in the working of the copper and lead shows in the vicinity of Mount Robe, beyond Purnamoota, but the cost and difficulty of transport, the scarcity of water owing to the phenomenally dry season, together with the want of capital, has resulted in the abandonment of many of the claims; and the same statement applies equally to many other small but promising shows scattered over the Barrier District. During the year a good number of tin claims in the neighbourhood of Euriowie were repegged, and put on the English market for flotation, but this appears to have exhausted the energies of the prospectors, as, so far as I can ascertain, nothing in the way of real work has been done during the year, and the negotiations for their sale have, so far, not had a successful issue.

The silver-lead claims at Allendale, near Poolammacca, have, I believe, been purchased by a powerful Broken Hill company, and there is now some prospect of their being systematically operated.

Of the claims in immediate proximity to the main lode, the A.B.H. Consols has had a considerable measure of success attending the year's operations, and has made some finds of remarkably rich ore, that have more than paid expenses, and encouraged further prospecting, which is now being vigorously prosecuted. In all probability a vertical shaft of large dimensions will now be sunk to intersect the lode at a point below the level of the deepest incline.

The Pinnacles Mine is now employing about sixty men, and seems in a fair way to prosperity.

On my last visit there were large bodies of ore in sight in the slopes of an apparently payable quality, judging from the class of material being passed through the mill, and the mine is now to be submitted to a very thorough prospecting, both in depth and by the extension of the levels already opened.

At Thackaringa Lead Mines nothing of an unusual nature has transpired. The deposits of galena and ironstone continue to be worked, and have yielded 221 tons of ore, containing 7,700 oz. of silver and 130 tons of lead.

Development at Broken Hill.—On the Broken Hill line of lode the development of the ore-deposit has continued with satisfactory results, and the mines now show prospects that augur well for the long continuance of the industry.

The South Mine is developing a large body of ore on the 800-foot level. The Central has passed through a large body of ore in the Kintore Shaft at about 700-foot level. Block 10 is now engaged in opening up the ore-body at 1,000-foot level. Broken Hill Proprietary has proved the existence of a large body of ore at the 800-foot level. Block 14 has developed an unexpected make of ore at their 400-foot and 500-foot levels, and are now preparing to open out at the 600-foot level. The British is pushing on with Blackwood Shaft from the 500-foot level, and there is the best of evidence of strong bodies of ore underfoot at the 400-foot level; and at the northern end of the lode the Junction, Junction North, and New North Mines have proved the existence of a strong lode at 850-foot, 950-foot, and 750-foot levels respectively.

Altogether the results of developments in depth during the year must be considered as highly satisfactory, and have added very appreciably to the available ore in sight.

The extraction areas of the various mines have also, in some instances (chiefly owing to unexpected divergences of the ore-body), augmented the reserves of ore, and it is probable that this will be the experience in the future.

To a large extent the limits of profitable working in the ore-body have been defined by the presence of unusual quantities of rhodonite in the ore (the extra cost of extraction, and subsequent treatment, putting this class of ore outside the paying margin), but the more general adoption of machine drills in stoping has brought this class of ore within the paying margin, and incidentally led to the discovery of richer patches of ore that would pay well.

Compressed air is thus becoming a very important factor in the work of the mine in the extraction of ore, as well as in the work of development, in which, until lately, machine drills have almost exclusively been employed. Almost every company has largely increased its air-compressor plant, and a notable instance of this increase is the plant recently completed at the Broken Hill Proprietary Mine (at a cost of about £10,000), capable of driving ninety-six machine drills.

Underground (Stopes).—Generally speaking, the systems of winning ore from the stopes remain the same as at date of last annual report; and, as I have previously fully described the various systems in vogue, I will content myself by, as briefly as possible, noting the improvements and modifications in the systems found to be advantageous.

In the bulkhead system a more general use of long stringers connecting two or more bulkheads and booms thrust out from the bulkheads has become common, and has been found of decided benefit.

In the sloping stope system, in moderately hard ore and in friable ore, some modifications and improvements have been introduced, particularly in picking up the bottoms of old stopes and levels.

This is now being done by means of light square sets placed on the mullock-filling.

In some stopes these light square sets have almost altogether replaced the clap-me-downs of the early system, but the slope of the stope is maintained, in order to secure the advantage of the natural strength of the arch, and the sets where possible are withdrawn or disconnected as a safeguard against the spread of fire.

It has been found also that it is advantageous to lath the sides and prepare for mullock-filling, simultaneously with the advance of the stope, in order that the upper portion may be filled with mullock before

before the stope is completed, should that course appear advisable or necessary. Very strict attention is paid to the prompt refilling of this class of stope, and there is no doubt but that this has added greatly to the general stability and security of the mines.

The problem of the safe working of these huge ore-deposits is one constantly engaging the attention of men skilled in their work, who are extremely alive to the difficulties to be encountered and who are constantly seeking, by new methods or improvements on old, to minimise the dangers of their work.

Not the least among the difficulties, is the fact that all present operations are to a serious extent affected by movements of ground consequent on the gradual collapse of the older unfilled workings of the mines and the resultant subsidences of overburden, and hanging and footwall rock have now to be reckoned with in securing the present workings.

The security of the back is the great problem, and the system adopted is determined by the character of the ore and circumstances, which may vary in each mine or in separate stopes of the same mine.

In hard ore the sloping stope presents the advantage of leaving the back in its strongest natural position, but has the disadvantage (because the mullock-filling necessarily conforms to the back) of presenting great difficulties in timbering the back, should it become weak from any cause, whereas the flat back stope, while presenting good opportunities for securing the back, leaves it in its weakest natural position, and consequently in very much greater need of securing. The safety of the stope, in hard ore, under either of these systems, must be considered from the standpoint of the whole and not from any individual face, because the extent of the stope is not broken or limited by pillars, except in rare cases. The particular system adopted is governed by the nature of the ore, the shape of the whole deposit, and the conveniences for refilling. In consequence the details of the work vary considerably. Both these methods have the advantage of finality, and though the system of stoping the lode in cross-section, leaving equal pillars of ore standing, has very decided advantages at present, I think the work of extracting the pillars will prove a very difficult one.

This class of ore (hard) is in some mines still being worked on the square-set system, but it is found of little service, except as staging, until the stope can be filled with mullock; and in places where mullock-filling is not readily available, the difficulty of keeping timbers in position, owing to the necessarily heavy blasting, in order to support the back, is very great; and, as a matter of actual practice, there is frequently a greater area of back unsupported under this system than under either of the others. This state of things is unavoidable, as it is impossible to keep the sets in position within 20 feet or 25 feet of the face, and the constant heavy blasting loosens all wedges and blocking, so that even though the sets are in position they are not for very long in actual contact with the back.

The safety of the individual still depends very largely on his own skill and ability, but it will be seen that the safety of the stope as a whole, and consequently the safety of the individual, may be affected by causes outside the control of the individual, and that, therefore, the safety of the workmen depends largely on the care, vigilance, and foresight of the officers controlling the working of the stope.

During the year the mines have been comparatively free from large movements of ground, and, except in the case of Block 10, no accident has resulted from this cause. In this instance there is now no doubt that the fall of ore in the stope was caused by a subsidence of rock above the extreme limit of the old unfilled workings, and that the sudden impact of the falling ground caused a shell of ore to break off from the back of the stope.

Every possible precaution is taken to guard against occurrences of this sort, but it is not possible to put in timbers or pack mullock so tightly as to altogether prevent them. Unfortunately, the nature of the ore is such that it gives no warning of weakness, and the fall is likely to be very sudden, and, generally, in a very large mass.

Open-cuts.—The open-cuts of the Broken Hill Proprietary have been vigorously operated during the year, but the winning of ore has been much hampered through subsidences of the hanging and foot walls of the lode. This has been caused partly by the underground fires and partly by the shrinking of the old square set stopes in the upper workings that were left unfilled.

It has been found necessary from time to time to further flatten the batter of the permanent sides, so that the work of extracting the ore from the bottom might be proceeded with with safety.

The haulage of the ore and waste material is mainly done on incline tramways, though aerial hoists are still in use.

A good deal of the waste is being utilised to fill up portions of the open, from which all the available ore has been extracted.

Besides these open-cuts, quarries have been opened on the Central, South, Block 14, and Broken Hill Junction North Mines for the express purpose of providing mullock for filling depleted stopes.

Block 10 and Broken Hill Proprietary Mines obtain their supplies from the waste-heaps of the latter, while the remaining mines are utilising the tailings from the concentrating mills for the purpose.

Machinery and boilers.—The increasing hardness of the ore, or, rather, the determination to treat the harder portions of the lode, has necessitated a large increase of boiler-power and ore-crushing machinery.

In regard to boilers, the tendency is to adopt some type of water-tube boiler in place of the Lancashire type, with a view to high initial steam-pressure, affording the opportunity to use the steam expansively.

In mill machinery the hardness of the ore has necessitated the adoption of more powerful rock-breakers, and the Blake Rotary is gradually replacing the old type of jaw rock-breaker.

There is also a remarkable increase in the appliances for the fine treatment of ores.

All the boilers in the district have been kept within the requirements of the regulations in the matter of periodical testings and cleanings, and all the machinery is as securely guarded as is at all possible. The system of recording the work of the boilers—that is, the time they are under steam—has the good effect of inducing more care of them, and the recording of the tests made is regarded by the managements as a very great safeguard, particularly as the tests are witnessed by some of the workmen immediately interested in the safe working of the boilers.

The Lead-poisoning Act.—During the year eighty-two cases of lead-poisoning have been reported, and the Australian Metal Company's Zinc Works at Railway Town is responsible for seventy of these.

On the mines I find the provisions of the Act very fairly carried out.

Owing

"THE BRITISH" B. H. PROPRIETARY SILVER MINE.

THE "BROKEN HILL SOUTH" SILVER MINE.

Owing to the increased number of workmen, the changing and bathing accommodation at some places has become rather cramped; but in every case when I have found it necessary to make representations to that effect the increased accommodation is being provided, either by enlarging the old premises or building new. The fact noticed in last year's report, as to the non-use of the baths except as a luxury in the summer season, is still very noticeable, and in winter not more than 10 per cent. of the workmen avail themselves of the conveniences provided.

At the Zinc Works every condition of the Lead-poisoning Act is being given its full effect, but notwithstanding this the cases of lead-poisoning are very numerous. The Company compels its employees to wear respirators while at work, having a printed rule to that effect, the infraction of which leads to instant dismissal; but the atmosphere of the buildings is so heavily charged with dust that every branch of the work suffers, including the engine-drivers and the officers. The excessive dust is due to the fact that the material to be treated must be thoroughly dried by being passed through a drying furnace, in order to add to the efficiency of the electro-magnetism, employed in the separation of the metals.

The separating machines are as completely enclosed as is consistent with the operation, and this undoubtedly does, to a very great extent, reduce the quantity discharged into the surrounding atmosphere. Exhaust-fans are also employed to draw off the dust and discharge it into a chamber. Some further modifications are now in progress, both in the enclosing of the machines and in the application of the exhaust-fans, which it is hoped will minimise the evil.

Water-bags and filters, in accordance with the Act, and bathing and washing conveniences, are provided; but the two latter, I am informed, are not much availed of. I am pleased to be able to record the anxiety of the officials to reduce the liability to leading, and their willingness to carry out every provision of the Act, and to adopt any suggestion having for its object the health of their employees.

As will be seen from the record, many of the names appear over and over again, and these men, having proved their extreme susceptibility to lead-poisoning, should, in their own interest, endeavour to find some other class of employment.

Some further precautions appear to be necessary. There is no doubt but that a careful following of Dr. Ashburton Thompson's personal rules would prevent some of the mischief, but there is not much chance of their being followed unless made compulsory.

The effects on the health of the men employed in this industry are so serious as to more than counter-balance the benefit the community derives from the increase of trade resulting from it, or the addition to the mineral wealth of the Colony; and as the case at present stands, it would seem almost as if, in the interests of health, the treatment should be stopped. There are, however, experiments now in progress for the treatment of zinc tailings direct from the mills—that is, in a wet state—which already have a distinct element of success; and it is to be hoped that these experiments will prove entirely successful.

The Prospecting Vote.—During the year I have reported on numerous applications for aid from the Prospecting Vote, chiefly on account of claims containing copper. Of the claims to work which aid has been granted, the Little Broken Hill Silver and Lead Syndicate, at Rockwell, and R. Tregize, at Silverton, have made such finds as have enabled them to repay the amount of the aid granted; while Wiseman's, at Acacia, now known as the Nadbuck Copper-mine, and Harding, Bray, and Jones' Claim, 8 miles from Silverton, have such prospects as should shortly leave them independent of any further aid from the Vote, as both claims have been able to make shipments of highly payable ore. Nothing of any consequence has been discovered under the auspices of the Vote at either Thackaringa or Purnamoota. At the Nine-mile a big ore-deposit has been proved to exist at 160 feet from surface, but the ore is evidently of too complex a character (consisting of zinc, lead, and copper, &c.) to be efficiently or profitably worked, except after the expenditure of a considerable amount of capital in the development of the mine and the erection of complete works for treatment of the ore locally.

Treatment of Ore and disposal of Products.—Carbonate of lead and other oxidised ores are still being raised at the Broken Hill Proprietary, Block 14, and British Mines, and are shipped in the crude state to the sea-board for treatment.

In the concentration of the sulphide ores, owing to the increased hardness of the ores brought within the limits of profitable treatment, the most noticeable features of the work during the year are the increases in the capacity and strength of the rock-crushing machinery and the multiplication of the appliances for fine-ore dressing. The results, generally speaking, have been, in the first instance, to materially increase the capacity of the mills; and, in the second instance, to increase the product, while producing cleaner material and rejecting poorer tailings.

The bye-products of the mills—zinc tailings, zinc slimes, &c., &c.—are still in great demand, and some of the companies have made large sales of this material during the year, and thereby considerably increased their profits. I think the near future will see the erection of plants owned by the mining companies for the recovery of the metals contained in the tailings, and other products of the mills, which may now be considered as waste; meantime the efforts of the mill engineers are being directed to the separation of a clean zinc product direct from the jigs and tables.

The Australian Metals Company has now a large electro-magnetic plant for the separation of zinc employed exclusively in the treatment of tailings. The plant is in full work, and I am informed with a gratifying amount of success.

Experimental plants have also been erected in nearly all of the mines, and the tests in some instances are considered satisfactory.

The methods adopted vary greatly, but the principle is the same—electro-magnetism.

The chemical treatment has so far not got beyond the experimental stage.

Accidents and fatalities.—Of accidents and fatalities reported on by me as occurring in and about the mines of the district, the total is 107, comprising 15 fatal, 41 serious, and 51 slight accidents, besides numerous slight accidents which did not seem to require further investigation.

The records forwarded show in brief the causes of the accidents and the extent of the injuries received. A very large proportion of these accidents may be regarded as preventable; and though I should not care to pronounce these preventable accidents as arising from carelessness (though a good many might reasonably be classed under that heading), it is only too evident that many of them are the outcome of want of skill and experience on the part of the workmen. And it unfortunately happens in cases where experienced and capable workmen have been injured or killed the accident has occurred while attempting to rectify the damage done by and through the inexperience and unskillfulness of the workmen who preceded them.

I have good grounds for this opinion, as I have seen instances of it many times, and have also seen men working in places decidedly dangerous, which a few minutes' work would make safe, but without the knowledge of their danger until the boss visited them and informed them of it and instructed them how to secure themselves by timbering or taking the ground down.

And there seems no hope of remedying this state of affairs unless some system be adopted whereby youths may enter the mines as apprentices or beginners, and learn their business under skilled miners.

To this employment of unskilled labour is to be attributed a very large proportion of the accidents on the list, and evidence of the truth of this statement is furnished in the report of the manager of the Central Mine, who has kept figures regarding the employment and rejection of unsuitable men. He says regarding this subject:—

"The number of workpeople engaged during the half-year has been 1,120; leaving and discharged, 1,242. The average number employed being 764. So continuous and extensive a movement in the *personnel* is very detrimental to satisfactory working, and undoubtedly conduces largely to accidents of both a slight and serious character."

And I may further add that this opinion is often expressed by numbers of competent workmen who are personally known to me.

Prospects of the Industry.—The results of the development, as stated in a previous part of this report, must be very satisfactory to all concerned in the progress of the mining industry, and this, with the increased efficiency of the appliances for mining and treating the ores, leaves its permanence and prosperity in the future dependent only on the price of the metals.

During the year the various plants have been increased in capacity, and the Proprietary in particular has about doubled its capacity, so that we may expect a very much larger output of ore and a substantial increase in the number of men employed. The returns for December, 1899, give 6,910 for the Broken Hill lode and 7,245 for the district, as against 5,956 for the corresponding period in 1898.

The attached information regarding output and quantities of timber, explosives, &c., used will no doubt be found of interest as showing the magnitude and importance of the mining industry in this district:—

Tonnage of ore raised, 1,399,009 tons.

Material extracted from open cuts, 366,156 cubic yards.

Quantity of mullock-filling put into depleted stopes, 279,418 cubic yards.

Quantity of mining timber used, 13,586,572 superficial feet.

Amount of work in the way of shafts, winzes, levels, crosscuts, and rises accomplished, 14,136 lineal feet.

Quantity of high explosives used, 403,572 lb.

Detonators used, 535,300.

Fuse used, 66,602 coils.

Total value of explosives, fuse, and detonators, £27,748 16s. 2d.

Nominal horse-power of boilers, 5,220 h.p.

Nominal horse-power of engines, 5,706 h.p.

Present valuation of machinery and plant, £568,010.

Value of machinery and plant erected during 1899, £112,818.

Quantity of coal used in raising steam, 76,300 tons.

I have, &c.,

JAMES HEBBARD,

Inspector of Mines.

The Chief Inspector of Mines, Department of Mines, Sydney.

#### Mr. Inspector Godfrey's Annual Report.

Sir,

Sydney, 1 January, 1900.

I have the honor to forward you my annual report for the year 1899.

With one exception my work was confined entirely to the Southern District, and during the twelve months I inspected the following localities and their environs:—Adelong, several times; Argalong, near Tumut; Big Hill and Bateman's Bay, Blairgowrie, Barmedman, Bongongo, Batlow, Bungendore, Bywong, Bredbo, Bombala, Cullinga, Cunningham, Coolac, Cootamundra, Cobar, Captain's Flat, Cooma, Cowra Creek, Currowan, Delegate, Fiery Creek, Garangula, Grenfell, Gundagai, Gobarralong, Hall, Junee, Jindabyne, Kybean, Lacmalac, Meragle, Muttama, Murrumburrah, Mimosa, Moruya, Mount Blundell, Nimitybelle, Nerrigundah, Narriah, Pambula, Quartzville, Sandy Creek, Sebastopol, Springdale and Scrubyards, Tumberumba, Temora, Tarago, Wyndham and Whipstick, Wolumla, Wyalong, Warrambucca, Weetangra, Wagonga, Yarralumla, and Yalgogrin.

During the year I travelled over 8,000 miles, and, in addition to my usual work of inspection, I reported upon a very large number of applications for prospecting aid.

There is a decided revival in mining in the Southern District for the year. At Adelong the Caledonian Mine has become dividend-paying, and as the discovery of the shoot of gold now being worked was due to aid granted by the Prospecting Board, it is gratifying to hear of its success. The money granted to them has been repaid. The Challenger Mine, an old property which has been reopened, is also prospecting well, and may soon become a gold-producer. The Gibraltar Consolidated Mine was in full work throughout the year.

Wyalong is also holding its own as a well-established gold-field, and many of the mines are being deepened and developed satisfactorily. The deepest shaft on the field is the Bantam, now over 600 feet deep. At the Shamrock and Waratah Mine some very fine poppet-legs have been erected, and a first-motion winding engine, this being the first engine of its class erected on the field. Messrs. Neeld have erected a 20-head battery on their mine, and have now many thousand tons of ore at grass ready for treatment.

In the more easterly portion of the Colony mining is rather depressed, but there is great activity amongst dredging companies, every available river and creek having been taken up for this purpose, and one dredge, 4 miles below Araluen, is now at work.

I had to inquire into five fatal accidents during the year, as well as a fatal accident at Cobar, which was caused by the explosion of a water-jacket blast-furnace, owing to water finding its way into the molten matte.

Most.

Most of the accidents were preventable, but, as usual, the danger was not realised until the accident had occurred.

Speaking generally, it may be said that care has been used in working the mines, and I have not had to serve many written notices during the year.

I have, &c.,

J. R. GODFREY,

The Chief Inspector of Mines, Sydney.

Inspector of Mines.

#### Mr. Inspector Hooke's Annual Report.

Sir,

Sydney, 2 January, 1900.

I have the honor to submit the following statement in connection with the work performed by me during the year 1899 :—

The localities visited were in the vicinity of Amaro, Bathurst, Blayney, Boney's Rocks, Bodangora, Burraga, Burra Burra, Bumberry, Byng, Cadia, Carcoar, Cargo, Canowindra, Cow Flat, Cowra, Emmaville, Essington, Fifield, Forbes, Forest Reefs, Gallymont, Lucknow, Lewis Ponds, Mandurama, McPhail, Mitchell's Creek, Molong, Mt. David, Mt. Costigan, Mt. McDonald, Newbridge, Oberon, Ophir, Orange, Parkes, Palmer's Bulga, Peak Hill, Pinnacle Reefs, Rockley, Rosedale, Stuart Town, Sunny Corner, Toogong, Tomingley, Tuglow, Woodstock, Wyagdon, Weelong, and Yeoval.

During the period under review 9,525 miles were travelled, and 438 inspections were made, many of which being in connection with applications for aid from the Prospecting Vote.

During 1899, so far as my district is concerned, in copper-mining only has there been any increased energy shown, and notably at the Burraga Copper-mine, which, under new ownership and management, is being reopened with a new main shaft from surface, whilst this latter is being equipped with modern smelting furnaces and accessories.

At Blayney the old copper-mine has been further developed, and has now at work an entirely new reduction plant, which, however, is not yet suited to the necessities of the ore, hence does not yet run continuously.

At Cow Flat also the old mine of that name has been acquired by an English company, who, with a large force of men, are busy developing the formation which years ago were worked to limited depths; in this case a new main shaft has been started, and has already intersected hitherto unknown ore-bodies.

In the vicinity of Byng, near Orange, the old Icely Copper Mines are about to be further exploited, steps to that end being busily proceeded with under the guidance of a former manager.

Another copper-mine of note reopened during the year is the Milburn Creek Mine, which promises to take a place amongst the producers; whilst a number of others of lesser importance than the foregoing could also be cited.

In gold-mining new discoveries have been made at Rosedale, near Orange, also at Bodangora, near Wellington, and at Clear Creek, near Bathurst; the first-named is in quartz veins, the others being alluvial. In each instance the discoverers and first-comers have been able to dispose of their claims with advantage to themselves; their true value, however, as mines, has not yet been finally determined.

Some of the older mines have retained their former high value, notably the Mitchell's Creek Freehold, recent developments in which at greater depths being exceptionally gratifying. In the case of the Wentworth Proprietary Mines at Lucknow, new ore-bodies of high grade continue to be found, still the quantity is not such as to cause the employment of the large number of men formerly engaged.

Dredge gold-mining is proceeding steadily, and when more intimate acquaintance with local peculiarities has been acquired will be even more profitable than at present; but two are working in my district, viz., one on the Macquarie and one on the Turon, whilst others are in course of construction for both rivers.

Other classes of mining are stagnant, due to various causes; and prospecting operations are being carried on mainly with assistance from the Prospecting Vote. No discovery or new development worthy of note has been recorded.

I have, &c.,

The Chief Inspector of Mines,

Department of Mines, &c., Sydney.

HENRY HOOKE,

Inspector of Mines.

#### Mr. Inspector Polkinghorne's Annual Report.

Sir,

Sydney, 10 January, 1900.

I have the honor to submit my annual report for the year 1899.

During the year my attention has been confined to the inspection of portions of the Western and Southern Districts.

The following mining centres have been visited :—

Western District.—Bathurst, Blayney, Burraga, Binda, Carcoar, Canowindra, Cargo, Dark Corner, Dandaloo, Forbes, Fifield, Gulgong, Gallymont, Hazelgrove, Hargraves, Hill End, Long Creek, Leadville, Mudgee, Mandurama, Myall, Molong, Oberon, Parkes, Peak Hill, Rockley, Sunny Corner, Sofala, Tuena, Trunkey, Tuglow, Two-mile Flat, and Wattle Flat.

Southern District.—Burrowa, Bungendore, Bredbo, Bombala, Bega, Captain's Flat, Cooma, Cobargo, Frogmore, Fiery Creek, Jindabyne, Myalla, Murrumbateman, Nanima, Pambula, Queanbeyan, Wolumla, Yass, and other places,—in the performance of which I travelled 9,904 miles by means of train, vehicle, horse, and steamer, and made 503 inspections, &c., 254 being in connection with the Prospecting Vote.

Several notices were served on mine owners and managers to remedy defects in connection with their mines, machinery, and steam-boilers.

As far as I have been able to ascertain these have been complied with.

Numerous sites have been tested during the year with assistance from the Prospecting Vote.

I think more attention should be paid to deep-sinking on all our fields.

I have, &c.,

JOHN POLKINGHORNE,

The Chief Inspector of Mines.

Inspector of Mines.

Mr. Inspector Carthew's Annual Report.

Sir, Hillgrove, 4 January, 1900.

I have the honor to submit my annual report for the year ending 31st December, 1899.  
During the whole of the year I have been engaged in the Northern District, my headquarters being at Hillgrove.

The following places have been visited, the majority four times, and some five:—Armidale, Ashford, Bendemeer, Barraba, Bingara (Upper and Lower), Bundarra, Bukkulla, Bungwall, Bulahdelah, Bucca Bucca (Upper and Lower), Boonoo Boonoo, Bowling Alley Point, Boggy Camp, Bora Creek, Balala, Copeland, Cobark, Coramba, Corinda, Coolongolook, Clarence Town, Casino, Crow Mountains, Chichester, Ctaiglee, Camp Fire, Dungog, Dungowan, Drake, Dalmorton, Dingo Creek, Deepwater, Emmaville, Enmore, Elsmore, Gilgai, Glen Innes, Glen Elgin, Grafton, Glenreagh, Glen Morrison, Gloucester, Hillgrove, Inverell, Kookabookra, Krambach, Limbri, Lionsville, Moonbi, Melrose, Moonanbrook, Manilla, Maitland, Nundle, Niangala, Nana Glen, Nymboi, Nine-mile, Omadale Brook, Pendaroi, Rockvale, Rocky River, Rawden Vale, Rivertree, Scone, Solferino, Stewart's Brook, Swamp Oak, Spring Creek, Tia, Tamworth, Teunterfield, Tallawadjah, Tingha, Uralla, Undercliff, Walcha, Wollomombi, and Wilson's Downfall.

This has necessitated my travelling of 9,704 miles, the majority of which has been by horseback and vehicles.

The number of mines visited was 248, of which 186 were visited in connection with the Prospecting Aid Vote, and I am pleased to say that in some instances payable results have been obtained therefrom.

Notices.—I have during the year served nineteen notices on mine managers and mine-owners in reference to mine workings, which were, in my opinion, defective.

Throughout the Northern District, especially that of New England, mining has been very active. During the year the Inverell District has no doubt made the most rapid strides, owing, perhaps, to the increased market value of tin, whereas the mines in the vicinity of Boggy Camp have been more developed, considerably larger quantities of diamonds have been and are still being won.

Several companies have been formed at Tingha for the purpose of tin-mining. The same may be said of Bora Creek, but in this field silver, lead, and copper are the principal ores on which mining operations are carried on.

Sites for dredging many of the rivers and creeks in the Northern Mining District have been located and pegged—in some instances for gold, but in many others for tin, and this method of mining will in all probability considerably augment the output in the coming year.

I have, &c.,  
JOHN CARTHEW,  
Inspector of Mines.

The Chief Inspector of Mines.

## COAL AND OIL-SHALE MINES.

Report on the Inspection of Mines under the Coal Mines Regulation Act, 1896, in the Colony of New South Wales, for the year ending 31st December, 1899.  
By A. A. ATKINSON, Chief Inspector of Coal Mines.

Sir,

Department of Mines, Sydney, 7 February, 1900.

As required by section 21 of the Coal Mines Regulation Act, 1896, I have the honor to submit the following report of inspection, together with a detailed list of fatal and non-fatal accidents, and other statistical information relating to coal and shale mining generally.

The report is divided as follows :—

- Section I. Persons employed.
  - „ II. Output and export of mineral.
  - „ III. Accidents.
  - „ IV. Prosecutions.
  - „ V. General remarks.
  - „ VI. Inspectors' Reports, &c.
- Return showing particulars of ventilation.

The quantity of coal wrought during the year amounted to 4,597,028 tons, the quantities in each District, and the comparative figures for the year 1898, being as follows :—

	1899.	1898.	Increase or Decrease.
	tons.	tons.	tons.
Northern District .....	3,259,708	3,355,600	— 95,892
Southern and South-western Districts .....	1,119,503	1,068,367	+ 51,136
Western District .....	217,817	282,284	— 64,467
Totals .....	4,597,028	4,706,251	— 109,223

The quantity of oil-shale wrought during the year amounted to 36,719 tons, the quantities in each District, and the comparative figures for the year 1898, being set out hereunder :—

	1899.	1898.	Increase or Decrease.
	tons.	tons.	tons.
Northern District .....	7,526	5,378	+ 2,148
Southern and South-western Districts .....	29,193	24,320	+ 4,873
Western District .....			
Totals .....	36,719	29,698	+ 7,021

The shale industry is at present in an unsatisfactory condition, as the present high rates of freight have had the effect of reducing the export. Colonial gas companies are using very little shale in the manufacture of gas ; but I understand that they are inclined to use shale oil, and this may induce the shale companies to erect a modern plant for the recovery of oil and other bye-products.

## SECTION I.

## PERSONS EMPLOYED.

TABLE showing the number of persons employed in and about Coal and Shale Mines, divided according to ages and occupation below or above ground, and in the several districts :—

Districts.	Number of Mines.	Below ground.			Above ground.			Total number of persons employed below ground and above ground.
		Ages.			Ages.			
		Boys under 16.	Males above 16.	Total below ground.	Boys of 14 and under 16.	Males above 16.	Total above ground.	
Northern .....	58	187	6,062	6,249	134	1,432	1,566	7,815
Southern and South-western .....	14	96	1,580	1,676	32	456	488	2,164
Western .....	20	11	422	433	7	104	111	544
Totals, 1899 .....	92	294	8,064	8,358	173	1,992	2,165	10,523
Totals, 1898 .....	95	244	8,145	8,389	132	1,998	2,130	10,519

These figures are obtained from the statutory returns made by the mine owners under section 27 of the Coal Mines Regulation Act, 1896 ; but as many of the returns are not received on the date required by the Statute, great inconvenience and delay is caused in making up the Statistics and completing the annual report.

## SECTION II.

SECTION II.  
OUTPUT OF MINERALS.

TABLE showing the output and value of Coal and Shale from mines under the Coal Mines Regulation Act, 1896, in the Colony of New South Wales, during the year 1899 :—

*Output.*

Districts.	Coal.	Oil-Shale.	Shale used for other purposes.	Total.	Value at Mine.
	tons.	tons.		tons.	£ s. d.
Northern .....	3,259,708	.....	.....	3,259,708	1,005,420 2 1
Southern and South-western .....	1,119,503	7,526	.....	1,127,029	284,331 2 3
Western.....	217,817	29,193	.....	247,010	76,870 13 1
Totals, 1899 .....	4,597,028	36,719	.....	4,633,747	£1,366,621 17 5
Totals, 1898 .....	4,706,251	29,698	.....	4,735,949	£1,303,666 11 0
Increase.....	.....	7,021	.....	.....	£62,955 6 5
Decrease .....	109,223	.....	.....	102,327	.....

TABLE showing the Output of Coal and Shale per person employed in and about Mines under the Coal Mines Regulation Act, 1896, in the Colony of New South Wales, during the year 1899 :—

*Output per person employed.*

Districts.	Below-ground.	Below and Above-ground.
	tons.	tons.
Northern .....	521	417
Southern and South-western .....	672	520
Western .....	570	454

The corresponding figures for 1898 were 564 tons per person employed below-ground, and 450 tons per person employed above and below-ground, whilst for the United Kingdom the figures (for all mines under the Imperial Coal Mines Regulation Act) for the year 1898 were 379 tons per person employed below-ground, and 304 tons per person employed below-ground and above-ground.

Showing Coal and Shale separately, we obtain the following figures :—

*Quantity raised per person employed.*

Districts.	Below-ground.		Below and Above-ground.	
	Coal.	Shale.	Coal.	Shale.
	tons.	tons.	tons.	tons.

„ 1898 .....	127	468	282,284	0 0	59,639 7 11
Increase.....	.....	.....	.....	.....	.....
Decrease.....	16	35	64,467	0 0	14,173 19 10

In the Northern District in 1899, whilst there were 48 more persons employed at the mines, there was a decrease in the output of coal of 95,892 tons.

The reduced output is to be accounted for by the stoppages of work at the Wallarah and Pacific Collieries in consequence of disputes, and also by short time worked at some of the larger collieries, especially Wallsend and Stockton.

The output of coal in the Southern District has improved to the extent of 51,136 tons as compared with 1898, with an increase of 54 persons employed. The Bulli Colliery was not working for several weeks, in consequence of a dispute between the owner and the workmen.

Stormy weather on the coast still prevents vessels loading at the jetties, and this causes a considerable amount of broken time occasionally at the Southern collieries.

The Western District shows a reduction of 64,467 tons in the output of coal, and 35 fewer persons employed, as compared with 1898. The reduced output was due to a stoppage of work at several of the collieries in the months of May, June, and July, about the price to be paid for getting the coal.

COKE.

During 1899 more ovens have been erected at the Co-operative Colliery in the Northern District, whilst a new plant of 16 have been erected and started at the Oakey Park Colliery in the Western District, and in the Southern District a few more ovens have been erected at South Clifton Colliery, and at the Unanderra Coke Works, and a new plant has been erected and commenced near Port Kembla.

This is, in my opinion, an industry which must grow with the metallurgical developments in the Colony, and efforts should be made to produce a good coke here, which would have the effect of reducing the quantity imported. This can only be done by attention to the treatment of the coal before coking, by washing and crushing, and by the selection of an oven best adapted for the coal to be treated.

The

The following table shows comparisons between the year under notice and the preceding year, as regards the proportion the accidents and deaths bear to the persons employed, and the quantity and value of the coal for each person employed in and about the coal mines in the Northern, Southern, and South-western, and Western Districts.

NEWCASTLE—Export of Coke for the year 1899.

Countries to which exported.	Quantity.	Value.
	tons.	£
Tasmania .....	3,945	4,459
Victoria .....	1,159	1,454
South Australia.....	9,761	12,050
New Zealand.....	371	513
West Australia.....	35	62
	15,271	18,538

During the year 1898, the total quantity of coke exported amounted to 9,644 tons, valued at £11,693.

The increase shown for 1899 over 1898 is therefore 5,627 tons, and £6,845 in value.

During 1899 the Co-operative Colliery Company have built several coke ovens, and it has been stated that the Sulphide Corporation Company intend to erect ovens near their works at Cockle Creek.

The following statements, kindly supplied by Mr. E. Potts, Customs Officer at Wollongong, show the shipments of coal and coke from the port of Wollongong and Jetties for the year 1899 :—

SECTION III.

ACCIDENTS.

The total number of accidents reported during the year 1899, including accidents on private branch railways, &c., was 162, the corresponding number for the previous year being 116. During 1899 there were 10 fatal accidents and 152 non-fatal, resulting in the deaths of 10 persons and injuries to 154 persons, the figures for the previous year being 25 deaths and injuries to 113 persons.

It is satisfactory to notice that there is a decrease of 15 in the number of lives lost ; on the other hand, the non-fatal accidents show an increase of 45, which is to be regretted. It would appear that one reason for the latter increase, is due to the fact that colliery managers are reporting more non-fatal accidents than has been their custom in the past, and this is to be commended.

In addition to the above the following deaths were reported in or about mines, but as they are not accidents within the terms of section 29 of the Coal Mines Act, they are not included in the annual statistics.

On the 30th March, a miner named John Absolom, 65 years of age, died in his working place in Stockton Colliery. At the inquest held on the body, evidence was given to the effect that death was due to natural causes, and the verdict was to that effect.

On the 24th April, a miner named Daniel Frazer, aged about 60 years, died from natural causes, whilst seated, having a smoke, near his working place, in the Mount Pleasant Colliery. The verdict at the inquest was to the effect that "deceased came to his death by heart disease."

On the 11th September, a boy named Lewis Dobb, who was attending school, when attempting to cross the Newcastle Coal Mining Co.'s private railway near Merewether, between loaded coal waggons in motion was caught by one of the waggons, run over and killed on the spot. A verdict of accidental death was returned at the inquest.

SUMMARY.

## SUMMARY of Fatal and Non-fatal Accidents.

Place and cause.	Fatal accidents.		Non-fatal accidents reported.

## List of Fatal Accidents.

No. of Accident.	Date of Accident, 1899.	Name of Mine.	Situation of Mine.	Name, Age, and Occupation of Person killed.	Cause of Accident and Remarks.
1	17 Jan...	Bulli .....	Bulli .....	John Stewart, 62, miner .....	He was coming outby along the engine plane, when he was caught by the engine set of tubs, and his body was found between one of the sheaves and the rope. The manholes or places of refuge were all in accordance with the Coal Mines Act.
2	7 April..	New South Wales Co.'s Shale Mine	Capertee .....	Wm. Stapley, 60, miner.....	Fall of stone in face of gateway not thought to be serious. Death was accelerated by acute bronchitis and pneumonia.
3	1 June..	Wickham and Bullock Island.	Carrington .....	Thos. Screen, 64, miner .....	Crushed between full tub and coal, when attempting to pass on road outby; injured internally about the abdomen. Died in Wallsend Hospital on following day.
4	29 July..	Brown's No. 4 ..	Minmi .....	Walter Wilks, 49, shiftman ..	Right foot badly cut by fall of stone in return airway. He and others were enlarging return when stone fell off the remains of a brick stopping. Tetanus set in, and he died in Newcastle Hospital on the 4th August.
5	1 Sept..	Lambton .....	Lambton .....	Jas. Hanlon, 41, miner .....	Hanlon was taking top coal down in the tunnel flat; he dropped a portion of "tops" to a facing, and had two props under the remainder, but whilst he was engaged in filling a tub a portion of these tops came away over the timber at a facing, causing fatal injuries.
6	30 „ ..	A.A. Co.'s No. 2 or Borehole.	Hamilton .....	Georgé Hancock, 69, miner ..	Fatal injuries by fall of coal whilst taking down "top band." Died 5th October.
7	9 Oct. ..	Gunnedah .....	Gunnedah .....	Charles White, 30, shunter ..	Fatal injuries caused by being crushed between buffers of railway waggons whilst shunting same at colliery siding.
8	20 „ ..	Metropolitan .....	Helensburgh ..	Oliver Hickman, 42, miner ..	Death was caused by fall of coal at the working face. Place was well timbered.
9	20 Dec..	Greta .....	Greta .....	William Francis Cotteril, 27 miner.	Whilst engaged in filling a tub a portion of the stone roof fell, inflicting fatal injuries.
10	21 „ ..	Dudley.....	Dudley.....	John Thomas Smith, 55, miner	Pelvis broken by fall of coal whilst holing, which broke over one sprag. Fast side of this coal had been fractured by a shot fired on the previous day. Died in Newcastle Hospital on the 23rd December.

The following tables show the districts in which the accidents occurred :—

FATAL ACCIDENTS.

Districts.	Fatal accidents						Deaths.					
	Explosions of fire-damp and coal dust	Falls of roof and sides	In shafts.	Miscellaneous under ground	On the surface	Total	Explosions of fire-damp and coal dust	Falls of roof and sides.	In shafts	Miscellaneous under ground	On the surface	Total.

LIST of Non-fatal Accidents.

No of Accident	Date of Accident, 1899.	Name of Mine.	Situation of Mine.	Name and Occupation of Person Injured.	Cause of Accident and Remarks.
1	4 Jan	Burwood ....	Lambton .	John Ford, miner .....	Fall of stone Both bones of right leg were broken between knee and ankle. The roof props were too far from the face, and no doubt this led to the accident.
2	5 ,,	South Bulli ...	Bellambi	H Mathison, naner	Fall of stone in a pillar working. Not in his regular working-place
3	6 ,,	Duckenfield	Minmi .	John Winterbottom, screen boy	Injury to leg whilst shunting waggons on a siding.
4	6 ,,	Brown's No 4	"	Henry Taylor, miner	Injury to leg by fall of roof in working place
5	10 ,,	Co operative ..	Plattsburg	Wm Love, screen boy	Injury to hand by waggons. Thumb and forefinger afterwards amputated
6	11 ,,	Burwood .....	Lambton	Robert Metcalfe, miner	Fall of coal in working place, causing severe bruises to left shoulder, left leg, and right hip One long and two short sprags were fixed, and he was going to fix another when the accident happened
7	11 ,,	Pacific	Teralba	Duncan Griffiths, miner	Injury to head and back by fall of coal from face.
8	12 ,,	Metropolitan	Helensburgh	Wm Nixon, wheeler	Both legs broken. Run over by two full tubs
9	13 ,,	Corrimal	Corrimal	James Dinnard, wheeler	Internal bruises by being squeezed between tubs He was attempting to put in a sprag and failed
10	13 ,,	Stockton	Stockton .	Thos Chilvers, waggon boy	Fell asleep by the side of surface railway, and empty waggon ran over his toe, taking off nail and flesh
11	18 ,,	A.A. Co's Sea Pit	Newcastle	John Mitcheson, horse driver	Two empty tubs were derailed, and Mitcheson was trying to put them on again without undoing the coupling chain The last tub slipped and jerked down on his arm, causing fracture of the bone close to the wrist
12	21 ,,	Bulli ..	Bulli .	Chas Hope, under manager	Fall of stone after firing a shot at a manhole on the engine-plane Leg broken and the injured man was off work a number of weeks
13	23 ,,	Hetton ....	Carrington .	Chas. Sneddon, miner . . .	Both legs broken by fall of roof coal He was wedging bottom coal when a piece of roof of peculiar shape fell from between two sooty facings
14	23 ,,	South Greta	Farley .	John Bradford, set rider ..	Injury to head and shoulders by jumping out of empty tub when entering tunnel
15	23 ,,	A A. Co's Sea Pit.	Newcastle ..	A. J. Price, flatter . . . . .	He was riding between two tubs in the flat, and jumped off, when he fell on to his right hand, causing a fracture of two bones between knuckle and wrist.
16	27 ,,	Seaham ...	West Wallsend	Jas Campbell, winding engine driver	Scalded at blow-off cock of a boiler.
17	31 ,,	Hetton	Carrington	Gilbert Anderson, miner ..	Injury to head and shoulders by a falling prop as he lay holing. Prop was knocked out by empty tub being raised from "roll off"
18	1 Feb	Stockton .	Stockton ..	Samuel Singleton, shaft bottomer	He fell with his fingers on the rail, and full tub ran over them, breaking one
19	4 ,,	Osborne Wallsend	Mount Keira	Wm Tubrian, water baler	Two ribs broken by being jammed between tubs and coal
20	4 ,,	Wallsend .	Wallsend . .	Henry Burt, miner	Injury to back and shoulders by fall of shale roof, whilst working at a pillar
21	6 ,	New castle Co's B Pit.	Merewether .	J. H Rouse, miner .....	Injury to abdomen by falling coal forcing pick handle against his body.

No. of Accident.	Date of Accident, 1899.	Name of Mine.	Situation of Mine.	Name and Occupation of Person Injured.	Cause of Accident and Remarks.
22	6 Feb.	Lambton .....	Lambton ..	Thos. Hubback, labourer	Fracture of leg by falling when loading rails on to a waggon.
23	13 "	Wallsend .....	Wallsend ..	John Gibson, waggon greaser	Injury to leg, which was afterwards amputated, by slipping between the guard-iron and wheel of a waggon when attempting to ride.
24	13 "	West Wallsend ..	West Wallsend.	Lewis Hughes, siding boy	Crushed slightly between tubs.
25	13 "	A. A. Co.'s Sea Pit.	Newcastle	J. Hope, onsetter .....	Fall of coal down shaft, struck him on the head, and caused a slight wound.
26	17 "	Cullen Bullen ..	Cullen Bullen	John Fitzgerald, miner	Thumb was crushed between two tubs, whilst in the act of coupling them
27	18 "	A. A. Co.'s Sea Pit.	Newcastle	W. Hitchcock, miner .....	Stuck point of pick into his toe whilst in the act of holing.
28	20 "	Hetton .....	Carrington	John Hicks, miner	Right leg broken by fall of coal when holing. About 2 cwt broke over a sprag.
29	21 "	A. A. Co.'s Sea Pit.	Newcastle	E. Bainbridge, shifter ..	Whilst taking a load of timber inby, one end of a batten caught the roof, and the other end struck him in the groin, causing a slight injury.
30	21 "	Burwood ..	Lambton	Edward Jones, miner	Fall of coal at face, causing fracture of legs. Right leg afterwards amputated.
31	22 "	Hetton .....	Carrington	George Kaye, miner	Fall of coal over sprag when holing. Injuries not very serious.
32	22 "	Osborne Wallsend	Mount Keira	John Rowls, miner	Whilst in the act of setting a prop at the working face, a piece of stone fell on his foot. No bones broken.
33	25 "	" ..	" ..	John Dobin, water baler	Hurt between shoulders. Jammed between tub and roof whilst riding in tub on main road.
34	3 Mar.	A. A. Co.'s Sea Pit	Newcastle	William Rowlands, miner	Injury to head by stone falling off caunch.
35	3 "	" ..	" ..	Henry Hurst, wheeler	Injury to foot by full tub upsetting whilst wheeling round a turn.
36	6 "	Newcastle Co.'s B Pit.	Merewether	A. Parker, screen boy	Fell from a tree when getting bushes for the purpose of sweeping flat sheets. He sustained fracture of left thigh, dislocation of left ankle, and fracture of small bone in left ankle.
37	7 "	A. A. Co.'s No. 2 or Borehole Pit.	Hamilton	Amos Clack, miner	Fall of coal in pillar working, causing a slight bruise on left hip.
38	7 "	Seaham ..	West Wallsend.	Thomas Griffiths, shaft boy	Struck by hauling rope. Injury to head, but not very serious.
39	7 "	Metropolitan ..	Helensburgh	John Sweeney, miner	Fall of stone in working place, slightly bruising his back.
40	10 "	Corrimal ..	Corrimal	Richard Huxtable, wheeler	Small bone of arm broken, between tub and coal, when coming round a curve
41	22 "	Mount Kembla	Mount Kembla.	John Bunn, miner	Leg broken by fall of coal in face when holing.
42	23 "	A. A. Co.'s Sea Pit	Newcastle	R. Matthews, miner	At the time of accident Matthews was shifting some jerry stone from a 3 feet caunch. A piece of coal about 1 cwt. rolled from the caunch and struck him on the left foot, causing injury to several toes.
43	23 "	Waratah .....	Charlestown	Peter Stoddart, miner.	This accident was caused by an explosion of powder. The injured man had drilled a hole vertically in the bottom coal 14 inches deep. He then got on his knees and inserted a plug of powder (2 oz compressed). He was leaning over the hole smoking (contrary to special rules), when a spark from his pipe fell into the hole, and ignited the powder, and the flames flashed into his eyes, causing total loss of sight.
44	29 "	A. A. Co.'s Sea Pit	Newcastle	A. Curry, miner	Fall of roof (coal) in working place, causing a slight wound on the head.
45	30 "	West Wallsend	West Wallsend.	James Macdonald, shiftman	Some loose rails being carried on an empty tub were pulled off by a passing horse, and fell upon Macdonald, resulting in two ribs being broken.
46	1 April.	A. A. Co.'s Sea Pit	Newcastle	George Winning, wheeler	Kicked by horse, causing bruise on right thigh.
47	4 "	New Lambton	Adamstown	John Roberts, wheeler	Jammed between loaded tub and coal, causing a bruise on right hip. He was without a light at the time.
48	7 "	Metropolitan	Helensburgh	Stephen Hanson, miner	Foot hurt by fall of coal from the face. Getting coal down after sprags were drawn.
49	7 "	Stockton	Stockton	Wm Eagles, miner	Tub knocked prop out and slab fell on his head, cutting it.
50	8 "	Osborne, Wallsend	Mount Keira	Charles House, wheeler	Arm broken, between tub and coal.
51	11 "	Stockton	Stockton	Samuel Packer, wheeler	Thumb jammed between tubs.
52	13 "	Metropolitan	Helensburgh	J. Meredith, wheeler	Jammed between tub and a prop. Internal injuries.
53	17 "	Co-operative	Plattsburg	Wm. Andrews, miner	Fall of coal when holing. Coal broke over two sprags. Fractured pelvis and lacerated bladder.
54	21 "	South Bulli	Bellambi	Charles Diegel, miner	Struck by his mate's hammer when setting a prop. Off work a few days
55	27 "	Hetton	Carrington	Arthur Miller, onsetter	Injury to chest by being crushed between full tubs at shaft bottom.
56	29 "	Sydney Harbour.	Balmain	J. Turner, sinker	Ankle bruised by a piece of stone falling out of bucket in pit bottom.
57	3 May	Metropolitan	Helensburgh	D. Davison, miner	Foot injured by fall of coal at working face. Not off work long.
58	6 "	A. A. Co.'s Sea Pit	Newcastle	R. Griffiths, fireman	Two toes fractured; caught between bed-plate and eccentric when oiling machinery.
59	9 "	Stockton	Stockton	Sydney Baber, labourer	Injury to spine by falling off a barrel into a timber waggon when fixing timber at screens
60	10 "	A. A. Co.'s Sea Pit	Newcastle	S. Wood, wheeler	Forefinger fractured. Caught between tub and coal when going round a curve
61	11 "	" ..	" ..	D. Mitcheson, wheeler	Hand was caught between top edge of tub and ribside, and all fingers on right hand were more or less bruised.
62	12 "	Brown's No. 2	Minmi	Samuel Wells, miner	Injury to foot by falling coal, whilst wedging off the face.
63	14 "	New South Wales Co.'s Shale Mine.	Capertee	Wm. Conney, miner	Fingers cut by fall of shale in the face.
64	29 "	Co-operative	Plattsburg	Andrew Fleming, trapper	Riding on buffers between two full tubs on surface tramline, when a lump of coal rolled off one tub, striking his leg and knocking him off. He fell on the rails, and several tubs ran over him. Right arm afterwards amputated at shoulder. Riding has since been prohibited.
65	2 June	Waratah .....	Charlestown	J. Walton, onsetter	Crushed by cage at pit bottom when oiling pulleys, causing a compound fracture of left leg.
66	5 "	East Greta	West Maitland.	William Difford, miner	Injury to back by fall of top coal.
67	8 "	Mount Kembla	Mount Kembla	Peter Johnson, miner	Leg broken by fall of coal in working face, when filling a tub.
68	9 "	Newcastle Co.'s B Pit.	Merewether	J. Minto, wheeler	Small bone of leg fractured between tub and horse lumbars.
69	21 "	A. A. Co.'s Sea Pit	Newcastle	John Maloy, wheeler	Caught between tub and props when passing through canvas door, and slightly crushed.
70	21 "	East Greta	West Maitland.	Walter Taylor, miner	Burns on left hand and wrist by ignition of powder (loose) whilst handling same with light on head (against special rules).
71	28 "	Eskbank	Eskbank	George Margison, miner	Toe was bruised by fall of coal in the face.
72	3 July	Newcastle Co.'s A Pit.	Merewether	H. Banfield	Sprained his back when filling a tub of coal.
73	3 "	Co-operative	Plattsburg	George Bruton, miner	Thigh broken by fall of "little tops" coal when holing. Coal had been fractured by a shot, and ought to have been pulled down.
74	3 "	Seaham	West Wallsend	David Lewis, wheeler	Injury to wrist by ignition of small quantity of fire-damp, given off by 3-inch coal falling. Lewis was holding horse's head when gas ignited at lamp in cap. Injuries not serious.
75	4 "	Wallsend	Wallsend	John Carter, miner	Injury to shoulder and foot by fall of roof coal and stone.
76	13 "	South Clifton	Clifton	E. Williams, miner	Sparks from fuse ignited blasting powder whilst in the act of testing fuse. Burnt about face, arms, and breast.
77	20 "	A. A. Co.'s Sea Pit	Newcastle	E. Bainbridge, shifter	Piece of stone fell from roof on to left hand, cutting the second finger.
78	20 "	Brown's No. 4	Minmi	Edward Scott, miner	Fall of stone. Muscular abrasion on shoulder and side. Stone 4 feet x 2 feet x 4 inches fell from between wall side and a prop upon the injured man as he was holing. Injuries not very serious.

No. of Accident	Date of Accident, 1899	Name of Mine	Situation of Mine	Name and Occupation of Person Injured	Cause of Accident and Remarks.
79	21 July	A A Co's Sea Pit	Newcastle	Wilton Price, wheeler	Slight bruise on instep of left foot caused by tub wheel
80	25 "	Metropolitan	Helensburgh	Joseph Geddes, miner	Fall of stone in working place, which knocked timber out, causing further falls
80	25 "	"	"	William Atkinson, miner	Both men slightly hurt, and had a miraculous escape
81	27 "	Stockton	Stockton	J W Walsh, trapper	Back slightly bruised by being jammed between an empty tub and a prop
82	28 "	New Lambton	Adamstown	J Rixon, blacksmith	When sliding down a crane chain, his privates were slightly injured by the hook
83	28 "	Mount Kembla	Mount Kembla	John Kain, miner	When lifting coal into a tub roof stone fell, which caused the bone above his right eye to be injured against corner of tub
84	2 Aug	Bulli	Bulli	John Johnston, greaser	Leg broken, between tub and rib of coal, whilst assisting a wheeler
85	3 "	Metropolitan	Helensburgh	Wm Harris, miner	One of his fingers was badly crushed by a fall of side coal
86	5 "	A A Co's Sea Pit	Newcastle	Geo Perham, miner	Slight burns on arms by explosion of shot
87	11 "	Corrimal	Corrimal	Roderick Fitzgibbons, wheeler	Kicked by a horse when in the act of uncoupling tubs, no bones broken
88	15 "	Co operative	Plattsburgh	Thos Bennett, water baler	Left thumb crushed between water tub and a prop, thumb afterwards amputated
89	15 "	Gunnedah	Gunnedah	Samuel Lemmon, wheeler	Thrown down by tail chain, and pinned against tub, bruised about head and body, but not very seriously
90	18 "	Wallsend	Wallsend	Henry Crompton, flatter	Fracture of arm whilst coupling loaded tubs
91	28 "	South Bulli	Bellambi	Sydney Casley, wheeler	Whilst in the act of taking sprag out of tub wheel, the horse started, causing sprag to cut flesh on calf of leg
92	29 "	A K O Co's Shale Mine	Capertee	John Parkinson, miner	A piece of shale burst out in working place and damaged his eye, injured man was wearing gauze eye protectors at the time
93	4 Sept	A A Co's No 2, or Borehole	Hamilton	Wm Belamy, miner	Fall of top band coal in pillar working, bruised on right hip and scratched on back
94	4 "	Dudley	Dudley	Jas Brown, miner	Injury to leg, above knee, by fall of coal
95	8 "	East Greta	West Maitland	Louis Tiedeman, miner	Slight burns on finger whilst lighting a shot
96	11 "	Hetton	Carrington	John Hall, wheeler	He was riding on limbs when cotter came out and detached limbs from tub. He fell in front of first tub and had his left arm bruised from elbow to shoulder, injuries not very serious
97	13 Sept	Duckenfield	Minmi	John Fullick, miner	Going into working place he sat down some yards from place. Placing his lamp on small coal an ignition of powder occurred, which burnt his left hand. Powder is supposed to have been inadvertently left by the man who had just left the cave. This was the first day for Fullick in this place
98	14 "	Corrimal	Corrimal	John Kay, miner	Right leg fractured. Fall of stone from roof startled Kay, who was partially lame on one leg, and in attempting to avoid fall his leg was broken
99	15 "	Wallsend	Wallsend	Frank Craig, wheeler	Injury to ankle whilst lifting loaded tub
100	15 "	Dudley	Dudley	Angus Whitfield, shiftman	Fall of stone on roadway. Injury to hand
101	15 "	Newcastle Co's B Pit	Merewether	R Burgess, wheeler	Knocked against side of bord by young horse, causing a graze on right temple, cut on right arm below elbow, and fracture of left arm near wrist
102	19 "	Dudley	Dudley	Henry Edwards, miner	Fall of coal. Injury to leg
103	19 "	Stockton	Stockton	Jos Hawkins, miner	Thigh burnt by the ignition of half a plug of powder, which he had placed in his trousers pocket, whilst busy lighting a shot. He was unable to say whether it was caused by sparks from lamps or fuse
104	20 "	Newcastle Co's B Pit Railway	Merewether	Thos Jones, labourer	Knocked down by locomotive on Company's private railway, and right arm was shattered, and afterwards amputated close to shoulder. Jones is both deaf and dumb
105	23 "	A A Co's Sea Pit	Newcastle	Richard Rodwell, painter	Severe shaking by falling off a plank whilst erecting a new band screen
106	25 "	Newcastle Co's B Pit	Merewether	Benjamin Sanders, wheeler	Empty tub which he was pushing overpowered him, and threw him on to his back, causing bruises in the region of the breast bone
107	26 "	Stockton	Stockton	Peter McDade, miner	Sprained ankle and slight bruise on leg caused by a piece of coal falling. Worked two hours after accident, and it was not until he was on his way outby that the injury troubled him
108	27 "	Duckenfield	Minmi	Jas Price, miner	Whilst holing, a piece of roof stone fell on his left leg causing simple fracture
109	2 Oct	A A Co, No 2 or Borehole	Hamilton	Wm Thompson, miner	Working at a pillar and pulling some loose stone from the roof, when a piece fell on his shoulder inflicting a flesh wound
110	2 "	Waratah	Charlestown	Richard Pascoe, wheeler	Foot bruised by full tub leaving rails
111	2 "	Co operative	Plattsburgh	Stephen Neilson, miner	Whilst preparing to fix a prop some stone fell upon him dislocating his left shoulder. He was off work four weeks
112	6 "	West Wallsend	West Wallsend	Walter Williams, driver	Kicked by his horse as he was detaching him from his train of tubs causing damage to bridge of nose
113	6 "	Bulli	Bulli	Richard Brodie, feeding coal shaker at Coke works	Smrit got entangled with horizontal shaft, resulting in his arm being broken. Injured boy had left his usual place of work
114	14 "	A A Cos Sea Pit	Newcastle	James Sharp, fitter	Injury to foot by falling off stage into hopper when fixing travelling belt for small coal
115	16 "	West Wallsend	West Wallsend	Ernest Gibson, shaft siding boy	Forearm fractured by being caught between tubs whilst trying to couple them together
116	17 "	Mount Kembla	Mount Kembla	James Callaway, locomotive fireman	Leg broken at jetty (several miles from colliery), was in the act of getting on to the locomotive when his foot slipped, and his leg went through one of the spaces between the planks of bridge, causing it to break
117	17 "	Greta	Greta	Samuel Lane, miner	Injury to leg by falling coal. The coal was holed and spragged. Sprags were drawn, but as the coal failed to come away, he was standing up cutting it when a portion fell
118	23 "	Brown's No 2	Minmi	Geo Taylor, miner	Partly filled tub dropped over the rail ends and jammed him against a lid standing out from the top of a sprag he had set at the face. Collar bone broken
119	24 "	Hetton	Carrington	Geo Gill, miner	Fall of coal knocked out a prop which struck him on the head and shoulder
120	24 "	Corrimal	Corrimal	Allen Mackey, miner	Right thigh bone broken by a fall of coal at face. Working with his uncle, an experienced miner
121	24 "	East Greta	West Maitland	Adm Lavender, wheeler	Caught and severely bruised by moving a cage in jig, whilst travelling in jig during working hours contrary to rules
122	3 Nov	South Clifton	Clifton	Richard Dovey, miner	Small fall of roof stone from between timber and coal face, causing sprained ankle and bruised shoulder
123	3 "	Metropolitan	Helensburgh	Peter Worthington, miner	Leg broken by a fall of stone at the working face
124	3 "	Seaham	West Wallsend	Wm Stewart, wheeler	Arm fractured above the wrist by being caught between the wall side and tubs which he was trying to stop
125	3 "	A A Co's Sea Pit	Newcastle	W Williams, labourer	Severe wound caused on third finger of left hand, by being caught in a tippler of travelling belt
126	3 "	Newcastle Co's A Pit	Merewether	Hardy Bennett, miner	Fall of stone from roof, which struck him on the head, and also caused a bruise on the foot and fracture of big toe
127	8 "	East Greta	West Maitland	Frank Genge, mine	Burns on right hand, arm, and side, by ignition of loose powder whilst experimenting with fuse
128	8 "	Bulli	Bulli	Thos Kelly, miner	Whilst in the act of taking down a piece of coal it fell, knocking him against a prop, hurting his chest and head. He returned to his work in a few days
129	10 "	"	"	John Jones, miner	Whilst in the act of holing in the coal his pick struck a prop, and rebounding sideways caught the top of his foot, causing a flesh wound
130	18 "	Bulli Pas	"	Thos Haigh, miner	Broken arm above the wrist, and thumb taken off from first joint. A piece of stone of about 4 cwt fell from the roof, which caught him in its descent

No. of Accident	Date of Accident, 1899	Name of Mine.	Situation of Mine.	Name and Occupation of Person Injured	Cause of Accident and Remarks
131	17 Nov	Wallsend No 2	Wallsend	Frank Stokes and Thos Arm strong, miners	Fall of roof in pillar workings A large stone fell from a slip, knocking out two props, when a fall came and covered both. It consisted of 12 inches coal and 4½ feet shale, and was of the following dimensions —5½ feet thick, 8½ feet long, 4½ feet wide at base, and 2½ feet at top Fell from a well defined joint and a hanging slippery facing, bringing with it two props Armstrong's foot was cut and bruised, and Stokes received internal injuries, and was sent to Wallsend hospital.
132	23 „	Wallsend	Wallsend	Geo Reed, main road driver	Fracture of leg by being caught between lumber and front of tub, whilst riding on full tub
133	27 „ „	Ebbw Vale	Adamstown	W Maxwell, water baler ...	Abrasion of skin of back of both hands by being caught between top of tub and roof
134	28 „ „	Wickham and Bul lock Island	Carrington	John Brien, waggon shunter	Jumping into an empty waggon he twisted his leg, which broke the sinews below his right knee
135	29 „ „	Sydney Harbour	Balmain	Dennis Hughes, sinker	Injury to right leg and hand by stone falling down shaft from surface out of sinking bucket
136	1 Dec	Wallsend	Wallsend	Chas H Rae, deputy	Loss of right eye by piece of stone striking it whilst he was using a hammer in laying rails
137	7 „ „	Newcastle Co , B Pit	Merewether	C. Hawcroft, flatter	Bitten by horse , forefinger of left hand damaged
138	7 „	Waralah	Charlestown	J Sharp, miner	Fall of coal in face when holing Sprag was screwed out, and a portion of the falling coal struck the injured man across the loins and caused internal injury
139	8 „	Metropolitan	Helensburgh	Wm Lenham, wheeler	Internal injuries caused by horse plunging and knocking out two props, bringing down a fall of stone Injures not so serious as at first thought
140	9 „	Greta	Greta	Wm Morgan, wheeler	Brused on back by coming in contact with roof timber, when riding on full tub
141	9 „	Co operative	Plattsburg	John Hawkins, wheeler	Head and ear cut, requiring fourteen or fifteen stitches. Walking between his horse (attached by tail chain) and four full tubs, he lost his light at a canvas door, and tried to get on to side of roadway The timber was too close for him to do so, and the result was injury as above stated
142	11 „	Metropolitan	Helensburgh	Wm Gillespie, miner	Leg broken by fall of coal at the face, which came away from between two slippery partings
143	13 „	A A Co. Sea Pit	Newcastle	W Hedley, engine driver	Whilst oiling some of the bearers for the travelling belt which works over the top of the small coal bunker, when he lost his balance and fell into the bunker, a distance of about 12 feet, and on to small coal The muscles of ribs and hips on right side were injured, but not very seriously
144	18 „	„	„	J Williams, token boy	Whilst pushing an empty tub he fell and the axle of the tub forced his foot against a wooden chock, and caused a bruise to the right ankle and heel
145	18 „	Newcastle Co 's B Pit.	Merewether	John Mulvey, miner	At the time of the accident Mulvey was about to pull a portion of coal from a greyback, when about 2 cwt of coal slipped away, striking the pick and forcing Mulvey back He was hurled against a standing prop and sustained fracture of one rib and injury to another on the left side and several bruises on body
146	18 „	Northern Extended Stockton	Teralba	John Stubbs, assistant wheeler	Injury to head by kick from a horse near stables on surface
147	20 „	„	Stockton	John Scarant, mnner	Broken leg by fall of coal He was holing and had two sprags fixed—a long and a short one Taken to Newcastle hospital.
148	21 „	Hetton . ..	Carrington	Wm McKay, mnner	Bottom coal fell away over a sprag and caught him about the hips as he was holing It came away from a greyback.
149	27 „	A A. Co 's Sea Pit	Newcastle	Fran is Cooney, labourer	The injured man was unloading props from a truck on the surface and was standing in the truck A prop about 9 feet in length slid from the pile and struck Cooney on the left foot, injuring the big toe
150	28 „	Hetton . .	Carrington	Jas Gill, driver ..	Whilst holding a door open for his horse and an empty train to pass through the horse swerved and its lumber end struck the door post This threw the first tub off the rails and the boy was thereby jammed between the tub and the door. The injuries are to ribs and left knee
151	28 „	Metropolitan	Helensburgh	John Crowe, flatter	Whilst in the act of uncoupling tubs his fingers were crushed between buffers
152	29 „	Northern Extended	Teralba	George Hyslop, miner	Slight flesh wound on head by fall of coal from face.

The following table shows the death-rate from accidents in the Coal and Shale mines of the Colony for the years 1898 and 1899 :—

DEATH-RATE from Accidents in the Colony.

Year.	Per 1,000 persons employed below ground	Per 1,000 persons employed above ground	Per 1,000 persons employed below and above ground
1899	1·077	0 462	0 950
1898	2 741	0 939	2·377

The following table shows a comparison of the death-rate, &c , in respect of Coal and Shale mines in the Colony for the years 1898 and 1899, and those in Great Britain and Ireland for the years 1897 and 1898 (including the persons employed on private branch railways, &c., and accidents to such persons) :—

Place	Death rate from Accidents per 1,000 persons employed	Number of persons employed per Fatal Accident	Number of persons employed per Life Lost	Tons of minerals raised per Fatal Accident.	Tons of minerals raised per Life Lost.
New South Wales, 1899	0 950	1,052	1,052	463,362	463,362
„ 1898	2·377	1,168	421	526,216	189,438
Great Britain, 1898	1 284	837	779	259,857	236,962
„ 1897	1 338	810	748	240,331	223,880

It will be seen that the Colony compares favourably with Great Britain in the above statistics, especially as regards the year 1899.  
Of the three tables following, which are made up for the twenty years, ending with 1898, two afford comparisons as between Great Britain and Ireland and this Colony, and the third shows the fatal accidents here, classified according to place and cause.

STATEMENT

STATEMENT showing the tons of mineral raised, persons employed, lives lost, &c., in Great Britain and Ireland for twenty years, 1879-1898 (both inclusive), in mines under the Coal Mines Regulation Act.

EXPLOSIONS of Fire-damp and Coal-dust.

The only accident under this head during the year occurred at Seaham Colliery (No. 74 on list of non-fatal accidents) on 3rd July, when a wheeler had his wrist singed by the ignition of a small quantity of fire-damp, liberated by the "3-inch coal" falling.

Use of Safety-lamps, &c.

During the year fire-damp has been reported under General Rule 4 at the following collieries, viz.: Metropolitan, Bulli, Mount Pleasant, Osborne Wallsend, and Corrimal, in the Southern or Illawarra District; and at Dudley, Burwood, Lambton No. 2 Pit (late Durham), South Waratah, Newcastle Coal-mining Co.'s A Pit, Seaham, West Wallsend, Killingworth, Brown's Colliery (Minmi), Duckenfield, Wallsend, and Greta Collieries, in the Newcastle District. I am not aware that fire-damp has ever been seen at any of the collieries in the Lithgow or Western District.

Safety-lamps are used for the purposes of inspection under General Rule 4 at the collieries named above, as well as at South Clifton, Coal Cliff, Bellambi, South Bulli, Bulli Pass, and Mount Kembla, in the Southern or Illawarra District, and at Wallarah and East Greta Collieries, in the Newcastle District.

In addition to this they are used exclusively in the underground workings of the Metropolitan and Killingworth Collieries, and in all but the main intake airways of the Dudley Colliery, and in the south side workings of the Burwood Colliery.

The question as to whether any additional price shall be paid to miners when using safety-lamps is now engaging the consideration of some of the Colliery Owners and the Colliery Employees Federation, in the Newcastle District; and in order to facilitate the introduction of safety-lamps for use when considered to be necessary by any manager, without the probability of a stoppage of work ensuing, it would be well if this matter was satisfactorily settled.

The General Rules of the Coal Mines Regulation Act with reference to the use of safety-lamps in certain places, the construction and examination of same, are as follows:—

Rule 8.—No lamp or light other than a locked safety-lamp shall be allowed or used—

- (a) In any place in a mine in which there is likely to be any such quantity of inflammable gas as to render the use of naked lights dangerous; or
- (b) In any working approaching near a place in which there is likely to be an accumulation of inflammable gas.

And when it is necessary to work the coal in any part of a ventilating district with safety-lamps, it shall not be allowable to work the coal with naked lights in another part of the same ventilating district situated between the place where such lamps are being used and the return airway.

Rule 9.—Wherever safety-lamps are used, they shall be so constructed that they may be safely carried against the air current ordinarily prevailing in that part of the mine in which the lamps are for the time being in use, even though such current should be inflammable.

Rule 10.—In any mine or part of a mine in which safety-lamps are required by this Act, or by the Special Rules made in pursuance of this Act to be used—

- (i) A competent person appointed by the owner, agent, or manager, for the purpose, shall, either at the surface or at the appointed lamp-station, examine every safety-lamp immediately before it is taken into the workings for use, and ascertain it to be in safe working order and securely locked; and such lamps shall not be used until they have been so examined and found in safe working order, and securely locked.
- (ii) A safety-lamp shall not be unlocked except either at the appointed lamp-station or for the purpose of firing a shot, in conformity with the provisions hereinafter contained.
- (iii) A person, unless he has been appointed either for the purpose of examining safety-lamps, or for the purpose of firing shots, shall not have in his possession any contrivance for opening the lock of any safety-lamp.
- (iv) A person shall not have in his possession any lucifer-match or apparatus of any kind for striking a light except within a completely closed chamber attached to the fuze of the shot.

Rule 11.—Where safety-lamps are required to be used, the position of the lamp-stations for lighting or re-lighting the lamps shall not be in the return air.

The foregoing rules are the same as in the Imperial Act of 1887. The Amending Act of 1896, in Great Britain, states, with reference to the use of lights:—1. (1) "The power to propose, amend, and modify special rules for a mine under the Coal Mines Regulation Act, 1887 (in this Act referred to as the Principal Act), shall include powers with respect to any of the following matters:—(a) The nature and description of the lights or lamps to be used in the mine, and their custody, and the mode of using and trimming them." I am not aware that the power given by this latter Act has been used with respect to the use of safety-lamps.

The Inspectors in Great Britain have always regarded General Rule 8 as unsatisfactory, not being sufficiently definite in its character, and affording too much scope for debate. In

Diagram showing the quantity of Mineral raised per life lost in New South Wales and Great Britain from 1878 to 1899 inclusive

New South Wales ———  
Great Britain ———

Photo-lithographed by  
W. A. Gullich, Government Printer,  
Sydney, N.S.W.

In connection with this matter I cannot do better than quote some of the remarks from the Annual Reports of the Inspectors in Great Britain.

In Mr. Moore's report for the year 1888 he states :—"As showing the difficulty of getting safety-lamps used, I may state that, with your permission, I raised a prosecution before the Sheriff of Edinburgh against the owners of Pentland Shale Mines for breach of General Rule 8 (a), but did not obtain a conviction. The case was this : A place was being driven uphill off the main level. After it had gone up 10 or 15 feet fire-damp was observed on more than one occasion, and duly noted in the report-book. When it had reached 37 feet, two men were going into it to work and encountered some fire-damp which ignited at one of their naked lights, and they were burned. I held that gas having been seen more than once, however good the ventilation might be, it was a place where by any temporary derangement fire-damp was likely to accumulate so as to render the use of naked lights dangerous; but the Sheriff did not convict, and naked lights are still used in the mine."

Mr. Robson, in the same year, says :—"The prohibition of naked lights under the eighth General Rule, cannot be enforced by an Inspector unless he can prove that there is likely to be such a quantity of inflammable gas as to render the use of naked lights dangerous. Now, similar conditions exist in mines worked with naked lights as in those where only safety lamps are used; the ventilation is conducted on the same principle, and is equally liable to temporary derangement where gas may accumulate. The small explosions which occur are, in my opinion, sufficient proof of the likelihood of gas being met with. Then, as to the 'dangerous quantity,' it seems to me that where the system has failed, and an explosion resulting in serious personal injury or loss of life occurs, this also is proof of the danger, and that only safety-lamps should be used. This view of the matter has not, however, been upheld in cases of prosecution in other districts, and I have not, as yet, thought it advisable to recommend proceedings under the eighth General Rule. I am confident that safety-lamps will become more and more into use, as a precautionary measure, which, of course, is their only legitimate purpose."

Mr. Martin, in his report for 1889, states :—"The eighth General Rule prohibits the use of any light other than a locked safety-lamp in any place 'likely' to contain a dangerous accumulation of inflammable gas. The word 'likely' renders the rule ineffective until the decision of a higher court has been obtained. In my opinion, the correct interpretation of the word is 'liable to,' which would prevent any seam known to give off fire-damp being worked with naked lights."

Mr. Robson, in his report for 1889, states :—"The kind of light which may or may not be used in a mine, or part of a mine, being a matter provided for by the 8th General Rule of the Coal-mines Regulation Act, 1887, it is clear that the onus is thrown on the owner, agent, and manager, to see that 'no lamp or light other than a locked safety-lamp shall be allowed or used in any place in which there is likely to be any such quantity of inflammable gas as to render the use of naked lights dangerous'. As remarked in my report for 1888, there is a difficulty in deciding when it becomes 'likely' that there will be a 'dangerous quantity' in any place, and this difficulty will probably exist until the rule is altered. I am strongly of opinion that it ought to be altered and made more workable by substituting the following words for those quoted above, viz. :—"No lamp or light other than a locked safety-lamp shall be allowed or used in any ventilating district at any time within twelve months after inflammable gas has been found in any part of such ventilating district."

Mr. Hall, in his report for 1890, states :—"Proceedings were taken against the responsible persons in reference to the circumstances of this accident, it being held by the prosecution that there had been a breach of the Act of Parliament in using unlocked safety-lamps in close proximity to an accumulation of fire-damp; but, as has already been reported to you, a conviction was not obtained. It does not appear to be practicable to take any further steps by means of arbitration, as the circumstances under which locked safety-lamps are required by law is specified in General Rule 8, section 49, of the Act of Parliament."

Further opinions of a similar nature might be quoted, but those given are ample to show the advisableness of amending General Rule 8, so as to make it more clear when safety-lamps ought to be used. In case of a difference of opinion existing between an inspector and a manager, as the law is at present, arbitration on this matter cannot be insisted upon, and I am of opinion that in such a case the reference to arbitration should be made compulsory.

As soon as a manager considers that safety-lamps have become necessary in a mine, or part of a mine, he should be in a position to adopt them at once, without waiting for any instructions from an inspector, or without any fear from trouble with the miners. Mr. Robson, in his report for 1892, makes some remarks as to the use of naked lights, which I commend to the notice of those colliery managers who have charge of mines giving off fire-damp, and are using naked lights :—"Naked lights, it will be seen, are again responsible for nearly all the explosions, so far as the means of ignition is concerned. This matter should command the attention of those owners and managers who still incline to the use of naked lights, and even permit their use in mines well known to produce some fire-damp, for there can be no doubt that in such mines, especially if dry and dusty, an explosion is always possible, and much more probable with naked lights than with safety-lamps. The impression too prevalent, I regret to say, amongst some owners and managers, that they are justified in continuing the use of naked lights until the inspector has taken action, requires correction. This is just as erroneous and improper as it would be to neglect the ventilation until an inspector complains of it. The use of naked lights may be legal one day and illegal the following day, and the responsibility very properly rests with the owners and managers, who are or ought to be cognizant of the daily condition of their respective mines, for duly enforcing the use of safety-lamps when it is necessary."

Having regard to the experience gained by the British inspectors, over many years, and in mines worked under very varied conditions, it seems to me to be desirable to give further quotations from their opinions on the question of gas and safety-lamps for the benefit of those managers who may not have an opportunity of reading their reports.

Mr. Stokes, in his report for 1891, states :—

The immunity from explosions is, in my opinion, due to the use of safety-lamps, with stricter discipline and supervision, for the best method of ventilation is occasionally subject to derangement, either as a whole or in detail, or some sudden outburst of gas may occur.

The report-book of a mine should contain a record of the slightest trace of gas found in the mine, so that the circumstances under which it was found may be investigated by those responsible for the safety and direction of the workings, and, if necessary, precautionary measures taken to deal with it, or prevent a serious accumulation.

The officials of a mine, whose duty it is to inspect the workings, should remember that although gas may only be very rarely found, yet it is not less their duty to daily search the workings in a trustworthy manner for such a dangerous and subtle enemy. The inspection should not be limited to the actual place where men work, but to all contiguous places which might contain accumulations of fire-damp.

The slightest explosion or inflammation of gas in a mine should be immediately reported to the manager, whether anyone has received injury or not, so that the occurrence may be inquired into, and steps taken to prevent a recurrence of an accumulation of gas.

In mines in which gas is frequently found, the manager and his officials should not hesitate to strictly carry out General Rule 8 of the Mines Act, both in spirit and in letter, and enforce the use of locked safety-lamps.

Mr. Robson, in his report for 1891, states —

The circumstances attending the above reveal, in some cases, a most lamentable disregard of rules and regulations for guarding against explosions, and in all a failure to take full advantage of enactments which the Legislature, guided by science and experience, have passed into law.

Where safety lamps were in use the lamps had been opened, and the flames thus exposed were the immediate cause of the explosions. But if all safety-lamps were securely locked by a lock which, if tampered with, would leave evidence of such tampering, there would be little of it attempted, if, indeed, it did not altogether cease. The ordinary method of locking by a screw, which may be manipulated by a nail, is unsatisfactory. Such a mode of locking as that of the stamped leaden plug appears preferable, and leaves little to be desired.

As to the use of naked lights causing explosions, it is clear that those owners and managers who, relying solely on ventilation and supervision for their prevention, will continue to be disappointed, for, however good the ventilation and inspection may be, sooner or later some derangement will occur, and bring about an accumulation of inflammable gas, the only other factor wanting to produce an explosion.

When such explosions occur under these circumstances, except in so far as they may have infringed some rule, the sufferers should not be blamed as much as the owners and persons acting in the management, who, knowing all the circumstances from day to day, permit the use of naked lights in mines more or less liable to contain inflammable gas.

Ventilation is now generally adequate under ordinary conditions, and strict attention to this matter at all times by the officials, so as to prevent even small accumulations, is absolutely necessary, and will do much to reduce explosions. But it is folly to stop here, and I take this opportunity of urging upon owners and managers to extend the use of safety-lamps in every case where the conditions of the mine even approach those contemplated by the statute, and thus provide an additional safeguard against explosions both great and small.

Mr. Stokes, in his report for 1892, states —

I hope that colliery managers will not hesitate to strictly enforce the provisions of General Rule 8 of the Mines Act, and work by the use of safety-lamps in all places where “there is likely to be any such quantity of inflammable gas as to render the use of naked lights dangerous.” The word “likely” is of extreme importance in this rule, for it would be a very small quantity indeed of fire-damp that would not be dangerous if it became ignited. Managers and officials generally should take note that the word “likely” is anticipatory; they need not wait until fire-damp does appear; but if the place is such as may probably contain such quantity of inflammable gas as to render the use of naked lights dangerous, then their duty is to use locked safety-lamps.

Mr. Ronaldson, in his report for 1893, in reference to explosions of fire-damp, says:—

They all took place (except in the case of the Herbertshire explosion) where naked lights were in use, and as a large proportion was, as usual, due to disregard of the rules, it is evident that, as the workmen and officials continue to ignore the regulations, it will be necessary to introduce safety-lamps in all mines giving off fire-damp, if explosions caused by open lights are to be prevented.

Mr. Stokes, in his report for 1893, states.—

Such an accident occurring in a mine so free from gas supports the strong precautionary measures which have been suggested for adoption in all mines, viz., that no lights other than a locked safety-lamp should be used in any seam of a mine in which fire-damp has been found at any time within the previous twelve months, and then only in accordance with General Rules Nos. 10 and 11 of the Mines Act.

Mr. Robson, in his report for 1893, states —

It will be seen that all these explosions or ignitions of fire-damp were of a nature only too common. Probably some of those which happened in naked-light collieries might have been prevented by more attention to the details of ventilation, and more care on the part of the sufferers themselves, but none of them would have occurred with safety-lamps, properly used; and until safety-lamps are universally adopted in mines only slightly fiery, small explosions will continue to happen.

Mr. Robson, in his report for 1894, states:—

In every one of the above twenty-four cases of explosion or ignition it was a small quantity of fire-damp which was kindled by a naked light. In nearly every instance the gas had accumulated at the “face,” because the current of air had not been sufficiently directed to the extreme point of the working, a thing which is exceedingly simple in itself, and which strict attention to the details of ventilation, on the part of the officials, would have prevented.

In a few cases the ventilation was found not so good generally as desirable, and the attention of the owners and managers was directed to this matter, and steps taken by them for improvement.

The exclusive use of locked safety-lamps in all seams known to produce fire-damp would have prevented all the above-mentioned small explosions; but so long as both owners of mines and workmen remain averse to making the change, as many of them undoubtedly are, and while the law as to safety-lamps remains as it is, the further substitution of safety-lamps for naked lights in mines only slightly fiery is likely to move as slowly in the future as in the past.

Mr. Wardell states, in his report for 1896, when commenting on the explosion at the Micklefield Colliery:—

Naked lights had been used all through the pit from its commencement, about twenty-three years ago, and shot-firing had been going on day by day. Both were considered to be perfectly safe, and yet, at the end of this long interval of time, this terrible disaster occurs. The fact gives rise to most serious anxiety, and an impression that the safest and proper course to take would be to prohibit naked lights in every pit, and restrict the mode of shot-firing to the use of high explosives. This might be looked upon by some as a hardship, but it would surely be better than running the risk of such a sacrifice of human life as has taken place here, in what was considered to be a perfectly safe pit.

Mr. Martin, in his report for 1898, states:—

By the blank refusal in some cases, and the omission in others, to introduce the use of safety-lamps, in consequence, apparently, of the extra cost, the owners, agents, and managers incur a very serious responsibility, and must not be surprised if they find Coroners direct juries that it is culpable neglect to deliberately omit the adoption of a precaution which is a practical and efficient safeguard, in the event of small or large accumulations of gas occurring, from whatever cause, or however unexpectedly they may arise.

Mr. Robson, in his report for 1898, states —

I find that the antiquated practice of giving a man a safety-lamp, yet permitting him to retain an open light as well, still prevails in certain mines, the idea being that the man will only use the safety-lamp on re-entering his working place after an absence for a short time therefrom. This has proved delusive many and many a time, and ought to be dismissed from the minds of managers as an impracticable means of guarding against slight explosions. If a place requires a safety-lamp as a precautionary measure, no other kind of light out to be allowed or used in that place.

These

These opinions indicate a growing tendency to advocate the use of safety-lamps in all mines which give off fire-damp even in small quantities, and, based as they are on extensive experience, are deserving of great consideration from colliery managers in this Colony.

The selection of the best types of safety-lamps, in order to comply with the terms of General Rule 9, as well as including simplicity of construction and a good illuminating power, requires every consideration where safety-lamps are being introduced. A good deal of useful information on this matter may be obtained from the Final Report of the Commissioners into Mine Accidents in Britain, published in 1886, as well as in many of the Mining Institute Transactions.

The Secretary for Mines has ordered samples of the best and most recent types of safety-lamps, in order to be able to afford information on this matter to the mining community.

I understand that 100 of Sussman's portable electric lamps are being introduced for trial at the Metropolitan Colliery, and it is to be hoped that their success may warrant their general adoption.

I would direct the attention of managers, in the case of mines using safety-lamps, to the necessity for a strict compliance with the provisions of General Rule 10, and the Special Rules of the mine having reference to the care and custody of such lamps.

ACCIDENTS from falls of roof and sides, classified according to the place where they happened.

Place where the Fall occurred.	Number of Fatal Accidents.	Number of Deaths.	Number of Non-fatal Accidents.	Number of Persons injured.
At the working face .....	6	6	53	55
On roads, while repairing or enlarging .....	1	1	1	1
On roads, while otherwise working, or passing .....	.....	.....	2	2
Total from falls underground .....	7	7	56	58

The fatal accidents from falls are two more than the previous year, but the number of deaths are the same. In each case the scene of the accident was inspected, and the inquest attended. It is satisfactory to observe that no lack of timber suitable for use in the working place was discovered in any of these accidents.

The non-fatal accidents and persons injured, caused by falls of roof and sides, each show an increase of 9 as compared with 1898.

The only way by which this class of accidents can be reduced is by increased vigilance on the part of the workmen, and by more supervision on the part of the officials.

The question of accidents due to this cause has recently been engaging the particular attention of the Inspectors in Great Britain, with the result that in August of last year the Home Office authorities caused the circular letter, of which the following is a copy, to be addressed to all the coal owners, agents, and managers in the country :—

Sir,

Home Office, Whitehall, 9 August, 1899.

I am directed by the Secretary of State to say that he views with concern the large number of accidents which are caused every year by falls of roof and side in mines. As you are no doubt aware this is the most fruitful source of accident in mines. In 1898, an average year in this respect, 431 out of the 908 deaths from accident in coal mines, or 47·4 per cent., were caused by falls of ground. In 1897 the proportion was even higher, viz., 480 out of 930 deaths, or 51·6 per cent. Moreover, this class of accident, as judged by the death rate, *i.e.*, the proportion of deaths to the number of persons employed, shows at present no tendency to diminish ; while there was a great reduction in the death rate from falls in the years immediately following the passing of the Coal Mines Regulation Act, 1887, there has, generally speaking, been no appreciable improvement since 1892.

It appears to the Secretary of State that the subject is one which calls for general action on the part of colliery owners throughout the country, and that the present condition of things cannot be suffered to continue without a serious effort being made to remedy it. He has made inquiry into the practice prevailing in the different districts for preventing such accidents, and he observes with satisfaction that, with a view to giving full effect to the general requirements on the subject contained in the Coal Mines Act (Rules 21 and 22) and where necessary supplementing them, many owners have, by Special Rules or otherwise, laid down in detail precautions which are to be observed by the mine officials and the miners in regard to the timbering of mines. For example, in a number of places Special Rules have been adopted requiring that props or other supports for the roof and sides shall be set in the working places at regular intervals, the distance which may not be exceeded between them being specified for each particular seam ; that sprags also shall be regularly set ; and that the timber shall be supplied by the management in the actual working places of the miners.

The Secretary of State learns that an improvement is observable in the districts in which these precautions have been most generally adopted, and he is of opinion that the universal adoption of similar rules would result in a general decrease in the number of accidents. He desires accordingly to impress upon owners of collieries the importance of their taking action in the matter.

He has consulted with the Mines Inspectors as to the precautions which may be recommended for general adoption, and they have agreed upon the following :—

- (i) A supply of suitable timber should be kept ready for use in *each working place*. The importance of this precaution is now generally recognised. It is in force already in many places with satisfactory results.
- (ii) Increased supervision by the mine officials and stricter enforcement of rules and instructions are necessary. In the first place, more frequent inspection of the parts where persons work or pass should be made during shifts by the officials of the mine, with the view of detecting dangerous parts of roof or side. Again, many accidents are caused by delay on the part of the miner himself to set the props or sprags which are necessary for securing his working place, and more supervision by the officials is necessary to enforce observance of the rules upon this subject. It is specially important that the officials should themselves see that any instructions which they may give for securing the working places are actually carried out.
- (iii) Many accidents which now occur during the drawing of timber would be obviated if the use of the “ringer and chain,” “dog and chain,” or other similar device, such as are already in use in many districts, were made compulsory.
- (iv) The precaution, however, which the Inspectors consider of the greatest importance is the systematic timbering and spragging of the working places. The question of when and where sprags or props should be set is one which in their opinion should not be left entirely to the judgment of the individual miner ; while he should be free to put up additional props when he considers them required, he should have no discretion to omit the setting of props altogether, or to exceed a fixed maximum distance between them. Experience shows that a large proportion of the accidents occur from falls of roof in which no fault or slip could previously be observed, and this source of danger can only be effectively met, and the roof and sides and working face actually made secure, by the timbering being done systematically, the manager specifying for every seam or district of a seam in the mine under his control the *maximum* distance apart at which the props, sprags, and other supports may be fixed in the working places, and the instructions when given being strictly enforced. This is the practice, as has already been mentioned, in some collieries, and it is in the unanimous opinion of the Inspectors of Mines of the highest importance.

It

It will eventually be desirable, the Secretary of State thinks, to embody these or similar precautions in Special Rules. In the first instance, however, he is anxious that owners, agents, and managers of collieries should be placed in possession of his views, and should give the matter special consideration; and he feels sure he may count upon their co-operation in the attempt to bring about a diminution in the yearly mortality among miners from this cause.

I am, &c.,  
KENELM E. DIGBY.

This matter is now being discussed by the Mining Institutes and members of the National Association of Colliery Managers, and the latter has issued a circular asking the members for answers to the following questions:—

- (a) What is the system as to supply and setting of timber in working places adopted in your district, generally?
- (b) Give a copy of any Special Rules or By-laws as to the supply or setting of timber, &c.
- (c) State the maximum distance at which the props are set apart from each other in working places, and the maximum distance from the coal face, and if you timber systematically.
- (d) How often do the officials visit the working places during the working shift?
- (e) Have you any Special Rule or By-law as to the use of “ringer and chain,” or “gablock and chain,” or “dog and chain” for withdrawing timber?
- (f) Have you any Special Rules or By-laws upon any of the points named in the Secretary of State’s circular letter; if so, give particulars?
- (g) Give the practice and experience of yourself upon the subject, and any recommendations and suggestions you or they may have to offer for the consideration of the Council.

During last year the fatalities in the coal and shale mines of the Colony due to this cause amounted to 70 per cent. of the total, and to 42·56 per cent. for the twenty years ending with 1898, 163 lives having been lost during the latter period.

The general question, therefore, of affording increased security to life and limb from this class of accidents is one, which requires special consideration from colliery managers in the Colony, particularly in regard to the second and fourth recommendations in the circular previously mentioned.

Shaft Accidents.—The most serious was No. 65 on the list.

No. 135 happened when there were twelve sinkers in the pit bottom, and had it not been that the full bucket was safely suspended by the operation of an over-winding or safety hook, the result of this accident would probably have been very serious.

Accidents due to over-winding have been very rare, and this is to the credit of the careful and steady class of men usually to be found at the winding engines.

There are a few collieries where safety hooks are not in use, and I have suggested to the managers of those collieries the advisableness of adopting this useful safety appliance.

ACCIDENTS with Explosives, classified according to their character or cause.

Nature of Accident.	No. of Fatal Accidents.	No. of Deaths.	No. of Non-fatal Accidents.	No. of Persons Injured.
While conveying explosives .....	.....	.....	3	3
While thawing explosives.....	.....	.....	.....	.....
While charging or stemming holes—				
From sparks of lamp, candle, or tobacco pipe .....	.....	.....	3	3
When using iron or steel tools .....	.....	.....	.....	.....
When using wooden, brass, or copper tools .....	.....	.....	.....	.....
Premature explosions—				
With squibs or straw .....	.....	.....	.....	.....
With safety fuse .....	.....	.....	.....	.....
Delayed explosions, due to fuse hanging fire .....	.....	.....	.....	.....
Blows from stones or coal projected by shots .....	.....	.....	2	2
Sundries and unknown .....	.....	.....	.....	.....
Totals.....	.....	.....	8	8

The most serious accident by explosives was No. 43, which resulted in total loss of sight, and was caused by a careless practice, inasmuch as the injured man was smoking when charging a hole with powder.

*Blasting.*—Compressed powder is generally used for blasting in coal and stone when required, which is usually fired by means of fuses, but occasionally by squibs.

With reference to the use of squibs, Mr. A. H. Stokes, Inspector for the Midland district in England, in a lecture to the Colliery Manager’s Association, on 25th February, 1899, makes the following remarks:—“The old and antiquated way of firing by ‘Germans,’ ‘straws,’ and ‘squibs,’ will, I hope, shortly be obsolete in coal mines; they have given rise to numerous accidents.”

Fortunately squibs are not used to any great extent in the Colony.

During 1898, in Great Britain, the following accidents took place by premature explosions, with the means of ignition given:—

Means of Ignition.	Fatal Accidents.	Persons Killed.	Non-fatal Accidents.	Persons Injured.
With squibs or straws .....	1	1	15	16
With safety fuse .. ..	1	1	4	6
With electric fuse .....	1	1	.....	... ..

This illustrates the danger of using squibs or straws, as compared with safety fuse or electric fuse.

In those mines where gas is given off, or where the roads are dry and dusty, great care should be observed in complying with the conditions of General Rule 12 when blasting is considered to be necessary. Managers of such mines would do well to consider the advisableness of adopting one of the high explosives, and the conditions laid down in the Explosives Order, a copy of the last one being as follows :—

*Statutory Rules and Orders, 1899.—No. 569.*

**MINES.—COAL MINES.**

**THE EXPLOSIVES IN COAL MINES ORDER OF THE 24TH JULY, 1899.**

ORDER made by the Secretary of State for the Home Department under Section 6 of the Coal Mines Regulation Act, 1896. WHEREAS by section 6 of the Coal Mines Regulation Act, 1896, it is enacted that a Secretary of State, on being satisfied that any explosive is, or is likely to become, dangerous, may by Order prohibit the use thereof in any mine, or in any class of mines, either absolutely or subject to conditions.

I hereby, in pursuance of the power conferred on me by the aforesaid section, make the following Order :—

*Absolute prohibition of certain explosives in unsafe mines.*

- 1.—(1) In all coal-mines in which inflammable gas has been found within the previous three months in such quantity as to be indicative of danger, the use of any explosive, other than a permitted explosive, as hereinafter defined, is absolutely prohibited in the seam or seams in which the gas has been found.
- (2) In all coal-mines which are not naturally wet throughout, the use of any explosive, other than a permitted explosive, as hereinafter defined, is absolutely prohibited in all roads, and in every dry and dusty part of the mine.

*Conditional prohibition of other explosives in unsafe mines.*

2. In all such coal-mines, or parts thereof as aforesaid, the use of permitted explosives is prohibited unless the following conditions are observed :—

- (a) Every charge of the explosive shall be placed in a properly drilled shot hole and shall have sufficient stemming :
  - (b) Every charge shall be fired by an efficient electrical apparatus, or by some other means equally secure against the ignition of inflammable gas or coal dust :
  - (c) Every charge shall be fired by a competent person appointed in writing for this duty by the owner, agent, or manager of the mine, and not being a person whose wages depend on the amount of mineral to be gotten :
  - (d) Each explosive shall be used in the manner and subject to the conditions prescribed in the Schedule hereto :
- Provided that nothing in this Order shall prohibit the use of a safety fuse in any mine in which inflammable gas has not been found within the previous three months in such quantity as to be indicative of danger.

*Conditional prohibition of all explosives in main roads.*

3. In every coal-mine the use of any explosive is prohibited in the main haulage roads and in the intakes, unless all workmen have been removed from the seam in which the shot is to be fired, and from all seams communicating with the shaft on the same level, except the men engaged in firing the shot, and in addition such other persons, not exceeding ten in number, as are necessarily employed in attending to the ventilating furnaces, steam-boilers, engines, machinery, winding apparatus, signals or horses, or in inspecting the mine ; or unless a permitted explosive is used, and every part of the roof, floor, and sides of the main haulage road or intake, within a distance of 20 yards from the place where it is used, is, at the time of firing, thoroughly wet, either naturally or from the application of water thereto.

This section shall not apply to such portions of the main haulage roads and intakes as are within 100 yards of the coal face.

This section shall not authorise the use of any explosive in any case where the use of such explosive is prohibited by section 1 or 2 of this Order.

*Conditional prohibition of detonators.*

4. On and after the 1st day of October, 1899, no detonator shall be used in any mine unless the following conditions are observed :—

- (a) Detonators shall be under the control of the owner, agent, or manager of the mine, or some person specially appointed in writing by the owner, agent, or manager for the purpose, and shall be issued only to shot firers or other persons specially authorised by the owner, agent, or manager, in writing.
- (b) Shot firers and other authorised persons shall keep all detonators issued to them until about to be used in a securely locked case or box separate from any other explosive.

*Application of Order.*

5. This Order shall not apply to mines of clay, or stratified or nodular ironstone, nor shall it apply to shafts in course of being sunk from the surface, or deepened, or to drifts and other outlets being driven from the surface, if such shafts, drifts, or outlets are not ventilated by return air.

Where a mine contains several separate seams, this Order shall apply to each seam as if it were a separate mine.

*Definitions.*

6. In this Order the term “permitted explosives” means such explosives as are named and defined in the Schedule hereto : Provided that where the composition, quality, or character of any explosive is defined in such Schedule, any article alleged to be such explosive which differs therefrom in composition, quality, or character, whether by reason of deterioration or otherwise, shall not be deemed to be the explosives so defined ; provided further that an owner, agent, or manager shall not be responsible for the composition, quality, or character of an explosive, if he shows that he has in good faith obtained a written certificate from the maker of the explosive that it complies with the terms of the Schedule, and that he has taken all reasonable means to prevent deterioration of the explosive while stored.

The term “road” includes all roads of any description extending from the shaft or outlet to within 10 yards of the coal face.

The term “main haulage road” means a road which has been, or for the time being is, in use for moving trams by gravity or by steam or other mechanical power.

*Revocation of former Orders.*

7. This Order shall come into force on the 1st day of August, 1899, from which date the Explosives in Coal Mines Orders of the 11th July, 1898, and 23rd December, 1898, are revoked.

*Citation.*

8. This Order may be cited as the Explosives in Coal Mines Order of the 24th July, 1899.

M. W. RIDLEY,  
One of Her Majesty's Principal Secretaries of State.

Home Office, Whitehall, 24th July, 1899.

## Schedule.

## LIST OF PERMITTED EXPLOSIVES.\*

*Ammonite*, consisting in every 100 parts by weight of the finished explosive of not more than 89 parts and not less than 87 parts of nitrate of ammonium, with not more than 13 parts and not less than 11 parts of thoroughly purified di-nitro-naphthalene, and with no other ingredient; the whole being uniformly incorporated;

Provided—

- (1) That the explosive shall be used only when contained in a case of lead and tin alloy thoroughly waterproofed with pure paraffin wax;
- (2) That the explosive shall be used only with a detonator or electric detonator fuze of not less strength than that known as No. 6½ (*i.e.*, the detonator or electric detonator fuze to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 19 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium); and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosive Act, 1875, and in force for the time being, such outer package shall bear the words, "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6½ detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Anvis*, consisting in every 100 parts by weight of the finished explosive of not more than 92 parts and not less than 89 parts of nitrate of ammonium, with not more than 6 parts and not less than 4 parts of wood-meal, and with not more than 6 parts and not less than 4 parts of thoroughly purified di-nitro-benzol and chlorinated naphthalene, and with no other ingredient, provided that the chlorine does not exceed 1 per cent. by weight of the finished explosive;

Provided—

- (1) That the explosive shall be used only when contained in a case of stout paper thoroughly waterproofed with ceresine;
- (2) That the explosive shall be used only with a special detonator or electric detonator fuze containing not less than 15 grains of a composition consisting in every 100 parts by weight of 93 parts of fulminate of mercury and 5 parts of chlorate of potassium; and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words, "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosives, to be used only with a special detonator"; and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Bellite No. 1*, consisting in every 100 parts by weight of the finished explosive of not more than 85 parts and not less than 82 parts of nitrate of ammonium, with not more than 18 parts and not less than 15 parts of thoroughly purified di-nitro-benzol, and with no other ingredients; the whole being uniformly incorporated;

Provided—

- (1) That the explosive shall be used only when contained in a case of linen paper thoroughly waterproofed with a mixture of carnauba and paraffin waxes;
- (2) That the explosive shall be used only with a detonator or electric detonator fuze of not less strength than that known as No. 7 (*i.e.*, the detonator or electric detonator fuze to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 23 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium); and
- (3) That, in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used with not less than No. 7 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Bellite No. 3*, consisting in every 100 parts by weight of the finished explosive of not more than 95 parts and not less than 92 parts of nitrate of ammonium, with not more than 8 parts and not less than 5 parts of thoroughly purified di-nitro-benzol, and with no other ingredient; the whole being uniformly incorporated;

Provided—

- (1) That the explosive shall be used only when contained in a case of linen paper thoroughly waterproofed with a mixture of carnauba and paraffin waxes;
- (2) That the explosive shall be used only with a detonator or electric detonator fuze of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuze to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium); and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Benedite*, consisting in every 100 parts by weight of the finished explosive of not more than 95 parts and not less than 92 parts of neutral nitrate of ammonium, with not more than 7 parts and not less than 5 parts of colophony which does not melt below 200 degrees Fahrenheit, and with no other ingredient;

Provided—

- (1) That the explosive shall be used only when contained in a paper case thoroughly waterproofed with ceresine, linseed oil and resin, and with or without the addition of carbonate or bi-carbonate of sodium, or alum;
- (2) That the explosive shall be used only with a detonator or electric detonator fuze of not less strength than that known as No. 8 (*i.e.*, the detonator or electric detonator to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 30.9 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium); and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words, "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 8 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*British Gelignite*, consisting in every 100 parts by weight of the finished explosive of not more than 62 parts and not less than 53 parts of thoroughly purified nitro-glycerine, with not more than 5 parts and not less than 3 parts of nitro-cotton, carefully washed and purified, and not more than 31 parts and not less than 26 parts of nitrate of potassium, and not more than 9 parts and not less than 6 parts of wood-meal, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper.
- (2) That the explosive shall be used only with a detonator or electric detonator fuze of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuze to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium).

(3).

\* This list is subject to revision in accordance with the results of experiments made from time to time in the Government Testing Station at Woolwich.

- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosive Act, 1875, and in force for the time being, such outer package shall bear the words, "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Bulldog Brand Gunpowder*, consisting in every 100 parts by weight of the finished explosive of not less than 83·5 parts and not more than 86·5 parts of pure saltpetre, with not less than 13 parts or more than 14 parts of charcoal, and not less than 1 part and not more than 2 parts of pure distilled sulphur, and with not less than 1 part and 2·5 parts of moisture, and with no other ingredient, the whole being thoroughly well incorporated, and to be of such strength that five parts, when exploded in a lead cylinder as used at the Home Office Testing Station, will give a result not inferior to that obtained by four parts of R.F.G.<sup>2</sup> gunpowder, and to be in the form of grains of a size to pass through a sieve of 10 meshes to the linear inch, and to be retained on a sieve of 40 meshes to the linear inch;

Provided—

- (1) That the explosive may, if so required, be compressed into a pellet of density not exceeding 1·4.
- (2) That the explosive, whether in grain or pellet form, shall not be taken into or used in a mine except when contained in a spark-proof brown paper case or cartridge.
- (3) That when the saltpetre is washed out, the residue of charcoal, after being dried at 230° Fahrenheit, must lose not less than 22 per cent. of volatile matter other than sulphur when heated to redness in a current of coal gas, and that when the said charcoal is burned in air, the residue of mineral matter shall be not more than 5 per cent.
- (4) That the explosive when in grain shall be in all other respects similar to the sample submitted for test on the 14th March, 1899, and when in pellet form, to that submitted on the 23rd March, 1899.
- (5) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Carbo-gelatine*, consisting in every 100 parts by weight of the finished explosive of not more than 40 parts and not less than 37 parts of a mixture of carefully washed nitro-cotton and thoroughly purified nitro-glycerine, with not more than 51 parts and not less than 48 parts of nitrate of potassium, and with not more than 12 parts and not less than 9 parts of a mixture of wood-meal and charcoal, provided that the charcoal shall not exceed 3 parts by weight in every 100 parts by weight of the finished explosive, and not more than 2 parts of carbonate of magnesium, and with no other ingredient; the whole to be thoroughly mixed or incorporated, so as not to be liable to liquefaction or exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed parchment paper wrapper.
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and marked with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients;
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Carbonite*, consisting in every 100 parts by weight of the finished explosive of not more than 27 parts and not less than 25 parts of thoroughly purified nitro-glycerine, with not more than 36 parts and not less than 30 parts of nitrate of barium and nitrate of potassium or either of them, and with not more than 43 parts and not less than 40 parts of wood-meal, with or without not more than half a part of sulphuretted benzol, and not more than half a part of carbonate of sodium and carbonate of calcium or either of them, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Dalmenite A*, consisting in every 100 parts by weight of the finished explosive of not more than 93·5 parts and not less than 91 parts of nitrate of ammonium, with not more than 6·5 parts and not less than 4 parts of naphthalene, and with not more than 2·5 parts and not less than 1 part of bichromate of potassium, and with no other ingredient;

Provided—

- (1) That the explosive shall be used only when contained in paper wrappers, waterproofed with paraffin wax and resin;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 7 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 23 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium); and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 7 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Earthquake Powder*, consisting in every 100 parts of the finished explosive of not more than 81 parts and not less than 78 parts of pure saltpetre, with not more than 22 parts and not less than 19 parts of charcoal, and with or without the addition of  $\frac{3}{4}$ th per cent. of pure sulphur, and with no other ingredient, the whole being thoroughly well incorporated, and to be of such strength as when exploded in a lead cylinder as used at the Home Office Testing Station, will give a result not inferior to that obtained with an equal weight of R.F.G.<sup>2</sup> gunpowder, and to be in the form of grains of a size to pass through a sieve of 11 meshes to the linear inch, and to be retained by a sieve of 40 meshes to the linear inch.

Provided—

- (1) That the gunpowder shall not be taken into or used in a mine except when contained in a parchment paper case or wrapper.
- (2) That when the saltpetre is washed out the residue of charcoal, dried at 230° Fahr., must lose not less than 56 per cent. by weight of volatile matter when heated to redness in a current of coal gas, and that when the said charcoal is burned in air the residue of mineral matter or ash shall not exceed 1·5 per cent. by weight.
- (3) That the explosive shall be in all other respects similar to the sample submitted for test on the 15th August, 1898.

- (4) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Electronite No. 2*, consisting in every 100 parts by weight of the finished explosive of not more than 96 parts and not less than 94 parts of neutral nitrate of ammonium, with not more than 6 parts and not less than 4 parts of wood-meal and starch, and with no other ingredient;

Provided—

- (1) That the explosive shall be used only when contained in a waterproof metal case made of an alloy of lead and tin or in a paper wrapper waterproofed with ceresine;
- (2) That the explosive shall be used only with a detonator or electric detonator fuze of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuze to be used shall possess an effective detonative strength as great as, or greater than that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium); and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and the proportion of the ingredients.

*Electronite No. 3*, consisting in every 100 parts by weight of the finished explosive of not more than 75 parts and not less than 70 parts of neutral nitrate of ammonium; with not more than 21 parts and not less than 16 parts of nitrate of barium; and with not more than 9 parts and not less than 6 parts of a mixture of wood-meal, slightly charred, starch, and pure pine resin which does not melt below 200° Fahrenheit, and with no other ingredient, and to be in the form of grains of a size to pass through a sieve of 12 meshes to the linear inch.

Provided—

- (1) That the explosive shall be used only when contained in a paper wrapper waterproofed with ceresine, or in a case of lead thoroughly waterproofed;
- (2) That the explosive shall be used only with a detonator or electric detonator fuze of not less strength than that known as No. 7 (*i.e.*, the detonator or electric detonator fuze to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 23 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium); and
- (3) That the explosive shall be in all other respects similar to the sample submitted for test on the 8th June, 1899; and
- (4) That in addition to the marking on the outer package required by an Order of the Secretary of State made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 7 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Elephant Brand Gunpowder*, consisting in every 100 parts by weight of the finished explosive of not more than 76 parts and not less than 74 parts of pure saltpetre, with not more than 15½ parts and not less than 14½ parts of charcoal, and not more than 11 parts and not less than 9 parts of pure distilled sulphur, and with no other ingredient, the whole being thoroughly well incorporated, and to be of such strength as, when exploded in a lead cylinder as used at the Home Office Testing Station, will give a result not inferior to that obtained with an equal weight of R. F. G.<sup>2</sup> gunpowder, and to be in the form of grains of a size to pass through a sieve of 11 meshes to the linear inch;

Provided—

- (1) That the gunpowder shall not be taken into or used in a mine except when contained, together with neutral oxalate of ammonium in the proportion of 1 part by weight of oxalate of ammonium to 2 parts by weight of gunpowder, in a spark-proof brown paper case or cartridge (Elephant Brand) in which there shall intervene between the gunpowder and the oxalate of ammonium a diaphragm of such strength and character as will effectually prevent any admixture of the two;
- (2) That there shall not be taken into or used in a mine any case or cartridge containing more than 9 oz. of the said gunpowder; that every case or cartridge shall be inserted intact in the hole, and that not more than one case or cartridge at a time shall be inserted;
- (3) That no shot with the said gunpowder shall be fired unless properly stemmed with an amount of stemming not less than would be sufficient for a charge of 9 oz. of ordinary gunpowder;
- (4) That the cases or cartridges shall be packed in thoroughly waterproofed wrappers, bags, or other receptacles, each containing not more than 5 lbs. of gunpowder; and
- (5) That, in addition to the marking on the outer package, required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each cartridge shall be clearly marked with the words "Permitted Explosive," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and the proportion of the ingredients.

*Elephant Brand Gunpowder No. 2*, consisting in every 100 parts by weight of the finished explosive of not more than 76 parts and not less than 74 parts of pure saltpetre, with not more than 15½ parts and not less than 14½ parts of charcoal, and not more than 11 parts and not less than 9 parts of pure distilled sulphur, and with no other ingredients, the whole being thoroughly well incorporated, and to be of such strength as, when exploded in a lead cylinder as used at the Home Office Testing Station, will give a result not inferior to that obtained with an equal weight of R.F.G.<sup>2</sup> gunpowder: and to be in the form of grains of a size to pass through a sieve of 11 meshes to the linear inch.

Provided—

- (1) That the gunpowder shall not be taken into or used in a mine except when contained, together with pure bi-carbonate of sodium in the proportion of 1 part by weight of bi-carbonate of sodium to 2 parts by weight of gunpowder, in a spark-proof brown paper case or cartridge (Elephant Brand) in which there shall intervene between the gunpowder and the bi-carbonate of sodium a diaphragm of such strength and character as will effectually prevent any admixture of the two.
- (2) That there shall not be taken into or used in a mine any case or cartridge containing more than 9 oz. of the said gunpowder; that every case or cartridge shall be inserted intact in the hole, and that not more than one case or cartridge at a time shall be inserted.
- (3) That no shot with the said gunpowder shall be fired unless properly stemmed with an amount of stemming not less than would be sufficient for a charge of 9 oz. of ordinary gunpowder;
- (4) That the cases or cartridges shall be packed in thoroughly waterproofed wrappers, bags, or other receptacles, each containing not more than 5 lb. of gunpowder; and
- (5) That, in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permissive Explosives"; and, further, that each cartridge shall be clearly marked with the words "Permitted Explosive," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Faversham Powder*, consisting in every 100 parts by weight of the finished explosive of not more than 87 parts and not less than 83 parts of nitrate of ammonium, with not more than 14 parts and not less than 9 parts of thoroughly purified di-nitro-benzol, with not more than 2 parts and not less than 1 part of chloride of ammonium, and not more than 3 parts and not less than 2 parts of chloride of sodium, and with no other ingredient; the whole being uniformly incorporated.

Provided—

Provided—

- (1) That the explosive shall be used only when contained in a case of paper thoroughly waterproofed with paraffin wax, and with or without a lead nozzle;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as 6½ (i.e., the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 19 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than 6½ detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Kynite*, consisting in every 100 parts by weight of the finished explosive of not more than 27 parts and not less than 25 parts of thoroughly purified nitro-glycerine, with not more than 36 parts and not less than 30 parts of nitrate of barium, and not more than 43 parts and not less than 40 parts of wood-meal, and with not more than half a part of carbonate of sodium, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in non-waterproofed wrapper of vegetable parchment;
- (2) That the explosive shall be used only with a detonator or electric detonator fuze of not less strength than that known as No. 6 (i.e., the detonator or electric detonator fuze to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Kynoch Gelignite*, consisting in every 100 parts by weight of the finished explosive of not more than 63 parts and not less than 54 parts of thoroughly purified nitro-glycerine, with not more than 5 parts and not less than 3 parts of nitro-cotton, carefully washed and purified, and not more than 34 parts and not less than 26 parts of nitrate of potassium, and not more than 9 parts and not less than 6 parts of wood-meal, and with or without not more than 1 part of chalk, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper;
- (2) That the explosive shall be used only with a detonator or electric detonator fuze of not less strength than that known as No. 6 (i.e., the detonator or electric detonator fuze to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Nahnsen's Gelignite*, consisting in every 100 parts by weight of the finished explosive of not more than 63 parts and not less than 54 parts of thoroughly purified nitro-glycerine, with not more than 5 parts and not less than 3 parts of nitro-cotton, carefully washed and purified, not more than 34 parts and not less than 26 parts of nitrate of potassium, and not more than 10 parts and not less than 6 parts of wood-meal, and with or without not more than half a part of chalk, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper;
- (2) That the explosive shall be used only with a detonator or electric detonator fuze of not less strength than that known as No. 6 (i.e., the detonator or electric detonator fuze to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium);
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*National Gelignite*, consisting in every 100 parts by weight of the finished explosive of not more than 64 parts and not less than 56 parts of thoroughly purified nitro-glycerine, with not more than 6 parts and not less than 4 parts of nitro-cotton, carefully washed and purified, and not more than 32 parts and not less than 24 parts of nitrate of potassium, and not more than 9 parts and not less than 5 parts of wood-meal, and with or without not more than half a part of chalk, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper;
- (2) That the explosive shall be used only with a special detonator or electric detonator fuze containing not less than 15 grains of a composition consisting in every 100 parts by weight of 95 parts of fulminate of mercury and 5 parts of chlorate of potassium;
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives"; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with a special detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Nobel Ardeer Powder*, consisting in every 100 parts by weight of the finished explosive of not more than 34 parts and not less than 31 parts of thoroughly purified nitro-glycerine, with not more than 14 parts and not less than 11 parts of kieselguhr, with not more than 51 parts and not less than 47 parts of sulphate of magnesium, and with not more than 6 parts and not less than 4 parts of nitrate of potassium, with or without the addition of not more than half a part of carbonate of ammonium and not more than half a part of carbonate of calcium, and with no other ingredient; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation;

Provided—

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper ;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 3 (i.e., the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 8 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chloride of potassium) ;
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives" ; and, further, that each inner package shall be clearly marked by the words "Permitted Explosive, to be used only with not less than No. 3 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the name and proportion of the ingredients ; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Nobel Carbonate*, consisting in every 100 parts by weight of the finished explosive of not more than 27 parts and not less than 25 parts of thoroughly purified nitro-glycerine, and not more than 36 parts and not less than 30 parts of nitrate of potassium, and nitrate of barium or either of them, and with not more than 43 parts and not less than 40 parts of wood meal, with or without not more than half a part of sulphuretted benzol, and not more than half a part of carbonate of sodium and carbonate of calcium or either of them, and with no other ingredient ; the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation ;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper ;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (i.e., the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium) ;
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives" ; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients ; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Nobel Gelignite*, consisting in every 100 parts by weight of the finished explosive, of not more than 63 parts and not less than 54 parts of thoroughly purified nitro glycerine, with not more than 5 parts and not less than 3 parts of nitro-cotton, carefully washed and purified, not more than 34 parts and not less than 26 parts of nitrate of potassium, and not more than 9 parts and not less than 6 parts of wood-meal and with or without not more than half a part of chalk, and with no other ingredient ; the whole being uniformly incorporated, and of such character and consistency as not to be liable to exudation ;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper ;
  - (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (i.e., the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium) ;
  - (3) That in addition to marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives" ; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients ; and
  - (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use
- Oxalate Blasting Powder*, consisting in every 100 parts by weight of the finished explosive of not more than 73 parts and not less than 69 parts of nitrate of potassium, with not more than 15½ parts and not less than 12 parts of charcoal, with not more than 16½ parts and not less than 13½ parts of oxalate of ammonium, and with or without not more than 2 parts of sulphur, and with no other ingredient ; the whole being thoroughly incorporated.

Provided—

- (1) That the explosive shall be used only when contained in non waterproof wrappers of (a) an alloy of lead or tin or (b) asbestos paper ;
- (2) That in addition to the marking on the outer package, required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives" ; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Pembridge*, consisting in every 100 parts by weight of the finished explosive of not more than 96 parts and not less than 93 parts of neutral nitrate of ammonium, with not more than 6 parts and not less than 3 parts of vegetable oil of a character approved by the Secretary of State, and with not more than 2 parts and not less than 1 part of sulphur, and with or without not more than 1 part of nitrate of barium, and with no other ingredient ; the whole being uniformly incorporated ;

Provided—

- (1) That the explosive shall be used only when contained in non-waterproofed wrappers of metal coated paper ;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 8 (i.e., the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 30.9 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium) ; and
- (3) That in addition to the marking on the outer package required in the case of this explosive by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives" ; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 8 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Rhenish Gelignite*, consisting in every 100 parts by weight of the finished explosive of not more than 59 parts and not less than 57 parts of thoroughly purified nitro-glycerine, with not more than 3 parts and not less than 2 parts of nitro cotton, carefully washed and purified, not more than 31 parts and not less than 28 parts of nitrate of potassium, and not more than 10½ parts and not less than 9 parts of wood meal, and with no other ingredient, the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation ;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper ;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (i.e., the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium) ;
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives" ; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients ; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Roburite*

*Roburite No. 3*, consisting in every 100 parts by weight of the finished explosive of not more than 89 parts and not less than 86 parts of nitrate of ammonium, with not more than 13 parts and not less than 9 parts of thoroughly purified di-nitro-benzol, with or without not more than 2 parts of chloro-naphthalene containing of chlorine not more than 1 part, and with no other ingredient, the whole being uniformly incorporated ;

Provided—

- (1) That the explosive shall be used only when contained in a case of paper thoroughly waterproofed with cerecine ;
- (2) That the explosive shall be used only with a special detonator or electric detonator fuze containing not less than 15 grains of a composition consisting in every 100 parts by weight of 95 parts of fulminate of mercury and 5 parts of chlorate of potassium ; and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives" ; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with a special detonator," and also with the name of the explosive, the name of the manufacturer, date of manufacture, and the nature and proportion of the ingredients.

*Sun Gelignite*, consisting in every 100 parts by weight of the finished explosive of not more than 59 parts and not less than 57 parts of thoroughly purified nitro-glycerine, with not more than 3 parts and not less than 2 parts of nitro-cotton, carefully washed and purified, not more than 31 parts and not less than 25 parts of nitrate of potassium, and not more than 10 parts and not less than 8 parts of wood-meal, and with no other ingredient : the whole being uniformly incorporated and of such character and consistency as not to be liable to exudation ;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of parchment paper ;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 6 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 15 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium) ;
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives" ; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 6 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients ; and
- (4) That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

*Westfalite No. 1*, consisting in every 100 parts by weight of the finished explosive of not more than 96 parts and not less than 94 parts of neutral nitrate of ammonium, with not more than 6 parts and not less than 4 parts of resin, consisting of pure pine resin which does not melt below a temperature of 200 degrees Fahr., and with no other ingredient ; the whole being uniformly incorporated ;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of paper ;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 8 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 30·9 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium) ; and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives" ; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 8 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

*Westfalite No. 2*, consisting in every 100 parts by weight of the finished explosive of not more than 92 parts and not less than 90 parts of neutral nitrate of ammonium, with not more than 5 parts and not less than 3 parts of nitrate of potassium, and with not more than 6 parts and not less than 4 parts of resin, consisting of pure pine resin which does not melt below a temperature of 200 degrees Fahr., and with no other ingredient ; the whole being uniformly incorporated ;

Provided—

- (1) That the explosive shall be used only when contained in a non-waterproofed wrapper of paper ;
- (2) That the explosive shall be used only with a detonator or electric detonator fuse of not less strength than that known as No. 8 (*i.e.*, the detonator or electric detonator fuse to be used shall possess an effective detonative strength as great as, or greater than, that of one containing 30·9 grains of a composition consisting in every 100 parts by weight of 80 parts of fulminate of mercury and 20 parts of chlorate of potassium) ; and
- (3) That in addition to the marking on the outer package required by an Order of the Secretary of State, made under the Explosives Act, 1875, and in force for the time being, such outer package shall bear the words "As defined in the List of Permitted Explosives" ; and, further, that each inner package shall be clearly marked with the words "Permitted Explosive, to be used only with not less than No. 8 detonator," and also with the name of the explosive, the name of the manufacturer, the date of manufacture, and the nature and proportion of the ingredients.

Where a high explosive is considered to be necessary it should not be fired by means of the ordinary fuse, and on this matter I beg to quote the following from Mr. H. Hall's report of 1890 :—

One of the non-fatal explosions was due to fire-damp being ignited by the running fuse of a roburite shot, and in consequence of this accident, and two others from the same cause, I issued the following circular-letter to the owners of all the mines in the district :—

*Blasting—General Rule 12.*

Dear Sir,

In consequence of frequent ignitions of fire-damp underground, through using ordinary mining fuse to explode roburite shots, I beg to give you notice that I cannot, in the future, look upon either roburite or any other high explosive as a non-inflammable explosive, when ignited by that means.

Apparently, the safest method of firing the explosives referred to is by an electric battery.

Yours faithfully,

HENRY HALL.

It is the general opinion that an electric battery is the safest method of firing shots, and where high explosives are employed this is the method used in England.

There are several mines in the Colony where the coal-dust is sufficiently dry, and the quantity great enough to carry an explosion through the main haulage roads, after it is initiated. Fortunately, little blasting is required to be done in the main roads, but when resorted to the dust should be thoroughly watered, and, in addition to complying with General Rule 12, a high explosive, electrically fired, should be used.

Managers of collieries, where coal-dust is found on the main roads, would do well not to allow any shot-firing on such roads without having first given a written authority to the official in charge of the blasting. Up to the present time there has not been any systematic attempt made at any of the collieries in the Colony to deal with the dust on the main haulage roads underground, but I understand that it is the intention of the management at the Metropolitan and Seaham Collieries to take water down the pit in pipes from the surface, and use it for watering the dust.

The

The following epitome of the Report of the Proceedings of the "Flameless Explosives" Committee of the North of England Institute of Mining and Mechanical Engineers, appointed in 1888, will explain the objects and conclusions of the Committee.

This Committee was appointed in consequence of new regulations as to the use of explosives underground, embodied in the Coal Mines Regulation Act of 1887, and also with a view to ascertain the value of the claim made by various manufacturers that their explosives were "flameless" and incapable of igniting fire-damp or coal-dust. It was demonstrated that the term "flameless" was incorrect, and these explosives are now generally known as "safety high explosives."

There were two series of experiments with these explosives, viz. :—

- 1st. To obtain results when fired into explosive mixtures of coal-gas or fire-damp and air.
- 2nd. To obtain results when fired into mixtures of coal-gas or fire-damp and air, with coal-dust in suspension, and also with coal-dust without any gas.

The conclusions arrived at by this Committee, after a lengthy series of experiments, were as follows :—

- 1. The high explosives (ammonite, ardeer powder, bellite, carbonite, roburite, securite, and westfalit) on detonation produce evident flame.
- 2. The high explosives are liable to ignite either inflammable mixtures of air and fire-damp, or air and coal-dust, or air, fire-damp, and coal-dust, and therefore cannot be relied upon as ensuring absolute safety when used in places where such mixtures are present.
- 3. The high explosives are less liable than blasting powder to ignite inflammable mixtures of air and fire-damp, air and coal-dust, and air, fire-damp and coal-dust.
- 4. The experiments have shown that ignitions of air and coal-dust, with or without the presence of fire-damp, can be obtained when there is present a much smaller quantity of coal-dust than has been previously supposed to be necessary.
- 5. It is essential that similar examinations of the working-places and precautions which are in force in mines where blasting powder is used should be rigidly observed where a high explosive is employed.
- 6. In selecting a high explosive for use in a mine, it should not be forgotten that the risk of explosion is only lessened, and not abolished by its use.
- 7. In view of the changes from time to time made in the proportions and constituents of high explosives, it is desirable that the name of the explosive should be printed on the wrapper of each cartridge, and that the date of manufacture, and the proportion of the ingredients used in the manufacture of the explosive, should be printed on the case of each packet of cartridges.
- 8. As these explosives alter in character if improperly kept, it is necessary that every care should be taken in the storage to ensure their being maintained in good condition.

I desire to call the particular attention of colliery managers to the fourth and fifth conclusions.

The results obtained by these experiments afforded great assistance in drawing up the new Mines Explosive Order in 1897.

UNDERGROUND Haulage Accidents.\*

Nature of Accident.	No. of Fatal Accidents.	No. of Deaths.	No. of Non-fatal Accidents.	No. of Persons Injured.
While engaged in pushing tubs or skips.....	.....	.....	6	6
While engaged in coupling or uncoupling tubs or skips.....	.....	.....	3	3
Run over while passing along or across levels or engine planes .....	1	1	1	1
Crushed between tubs, or between tubs and sides of levels or planes and props.....	1	1	28	28
In other ways .....	.....	.....	4	4
Totals.....	2	2	42	42

\* These include all accidents on inclined planes, and by trams and tubs (see table headed "Summary of Fatal and Non-fatal Accidents classified according to place and cause.")

There is an increase of 2 fatal and 25 non-fatal accidents under this head as compared with last year.

The two fatal are Nos. 1 and 3 on the fatal accident list, which are there sufficiently explained.

The large increase in the number of non-fatal accidents is much to be regretted. Some of them are caused by boys riding on tubs against the rules, and managers should make it clear as to where riding is or is not allowed. Many of them are caused by wheelers endeavouring to pass between tubs and props or tubs and the coal in the ordinary course of their work, and getting crushed.

ACCIDENTS ON Surface—Railway or Tramway.

Description.	No. of Fatal Accidents.	No. of Deaths.	No. of Non-fatal Accidents.	No. of Persons Injured.
While engaged in moving waggons.....	.....	.....	1	1
While engaged in coupling or uncoupling waggons.....	.....	.....	1	1
Run over while passing along or across railways or tramways .....	.....	.....	3	3
Crushed between waggons or between waggons and structures .....	1	1	.....	.....
In other ways .....	.....	.....	4	4
Totals.....	1	1	9	9

The fatal accident under the above head is No. 7 in the fatal accident list. The deceased in this case was in the act of lowering a waggon on a coal siding, when another waggon, supposed to have been left secure, followed him down, crushing him between the buffers to such an extent that he died in a short time.

The non-fatal accidents show a decrease of 6 as compared with last year.

SECTION IV.

SECTION V.

GENERAL REMARKS.

TRADE.

As statistics indicate, there has been a decrease in the output of coal in the Northern and Western districts, and an increase in the Southern district.

The export value of coal from Newcastle during the year as compared with that in the previous year, shows that the increase arranged in the beginning of 1899, in the price of best Newcastle coal, of 1s. 3d. per ton, was not maintained.

SYDNEY

## SYDNEY HARBOUR COLLIERY, BALMAIN.

During the year ended 31st December, 1899, substantial progress has been made in the sinking of the Birthday shaft. Altogether 967 feet of sinking, and 1,099 feet of walling, were completed during the year, making the total depth 1,552 feet, of which 1,541 feet was permanently walled. From 30th June to 31st December 552 feet of sinking, and 679 feet of walling were completed. There is no increase in the inflow of water, which averages about 500 gallons per hour.

The permanent steel headgear was erected over the Birthday shaft during the year, with practically no delay to the sinking. It is 70 feet 3 inches high from cage landing to centre of pulley wheels, and contains fully 80 tons of steel lattice-work and plating. Two pairs of capstan engines (one for each shaft) were imported and erected during the year, and the various permanent buildings about the colliery have been considerably advanced.

The building of the quay wall is completed. This contains 6,453 cubic yards of concrete, and, immediately in front of the wall, excavations have been carried out, where necessary, which give a clear depth of 26 feet of water at mean low-tide.

## VENTILATION.

In the Appendix to this report is a statement, showing the ventilating arrangements, &c., at the collieries in the Colony.

There is a tendency to replace furnaces by fans, and in every case where this is done the result is increased ventilation. The efficiency of the fan for ventilating purposes, as compared with the furnace in all shallow mines, such as those in the Colony, has been proved to such an extent that it is somewhat surprising to find that there are still a few advocates for the furnace, as a ventilating power. No doubt the first cost of a fan as compared with that of a furnace, operates against the former, although it is more efficient and cheaper over a term of years.

There is still much room for improvement in the stoppings erected underground for conducting the air to the faces of the workings at some of the collieries, and the managers of those collieries have had their attention directed to the matter.

## PLANS OF COLLIERY WORKINGS.

At a few collieries the plans of the workings are models of accuracy and neatness, at the same time giving a lot of valuable information. This, however, is rather the exception than the rule, and until the plans are prepared by efficient surveyors and draftsmen, who have passed an examination approved by the Department of Mines, this state of things is likely to continue.

## METHODS OF WORKING COAL.

Bord and pillar, with the modifications of single or double stalls, is the only method at present in vogue for working coal. Longwall is adopted in the shale mines.

The pillars left in the bord and pillar system still continue to be made too small at some collieries in the first instance, having regard to a successful "broken" or second working, and also to the extraction of the greatest possible percentage of coal from a given area.

It is a difficult matter to persuade some colliery managers of the unsuitability of the time-honored "8-yard bord and 8-yard pillar," even under very much increased depths.

The following condition bearing on this point is now included in the leases, &c., which are issued for working coal under Crown lands:—

And shall and will extract the coal (or shale) from the land hereby demised, in the most economical manner possible consistent with safety, and should the "pillar and stall" system of working be adopted, the percentage of coal to be left in the pillars after the bords, headings, drives, or other workings are constructed shall be as follows:—Where the depth from the surface does not exceed two hundred feet, fifty per cent.; from two hundred to five hundred feet, in the proportion of from fifty to sixty per cent.; from five hundred to one thousand feet, in the proportion of from sixty to seventy per cent.; from one thousand to two thousand feet, in the proportion of from seventy to eighty-five per cent.

## FORMS OF REPORTS UNDER THE COAL MINES ACT.

Having ascertained by making a collection of the reports used at the different collieries that some of them were not kept in accordance with the Act, I deemed it advisable to issue the following circular, and also the following forms of reports, which had received the approval of the Secretary for Mines, to each colliery manager.

At some of the collieries these have been adopted, whilst at others only a very slow response is made to any suggestion involving slight expense, and consequently these report forms are quietly put to one side.

Circular No. 93. 99-8,714 M.

Sir,

Department of Mines, Sydney,

I have the honor to enclose herewith several forms of report, in connection with the Coal Mines Regulation Act, 1896, which have been approved by the Secretary for Mines, and to request that you will be so good as to have them adopted at your mine, if similar forms are not already in use there.

There are two forms of report under General Rule 7, either of which may be adopted.

I would draw your attention to the advisableness of having the report books made so that a duplicate report can be sent to the Colliery office, where a copy is required, by General Rule 38 of the Act, to be kept.

I have, &c.,

Manager.  
Colliery,

Chief Inspector of Coal Mines.

Form

Form No. 8—Coal Mines.

Colliery.

GENERAL RULE 4.

Report of Inspection before commencing Work.

At Pit or Tunnel District or Districts examined Commenced inspection at o'clock  
on the day of 190 .

I (or we) the undersigned, being the competent person (or persons) duly appointed for that purpose, have carefully inspected (as required by General Rule 4), with a\* and report as follows :—

- Gas present :—
- Ventilation :—
- Roof and sides :—
- If any other source of danger :—
- Any other remarks :—
- Time of making report :—

Barometer, Thermometer, and Water-gauge indications at time of descent.

Time of descent.	Barometer.	Thermometer.	Water-gauge.

Signature of competent persons :—

\* Here insert "locked safety lamp" or "naked light."

Form No. 9—Coal Mines.

Colliery.

GENERAL RULE 5.

Report of Weekly Examination of Shafts.

Pit. At o'clock in the of 190 .

I (or we) the undersigned, being the competent person (or persons) duly appointed for that purpose, have carefully examined (as required by General Rule 5), and have to report that, at the above-named mine, the shafts are\*

Signature of competent person :—

\* Here write the word *safe* or *unsafe*, and, if *unsafe*, state the cause, and steps (if any) to remedy the matter.

Form No. 10—Coal Mines.

GENERAL RULE 7.

Report of Withdrawal of Workmen in Cases of Danger.

Colliery. Pit No. District . The mine (or part hereafter  
named) became dangerous at o'clock 190 .  
HAVING discovered the to be in a dangerous state, I have to report that I (or we), the undersigned, in accordance with General Rule 7, have withdrawn every workman therefrom, and have made a careful examination of with a locked safety-lamp, and have found the condition of the mine to be as follows :—  
Signature of competent person.

at o'clock p.m. or a.m. 190 .  
I (or we), the undersigned, have again carefully examined that part of the mine previously found to be dangerous, and find the same safe. Re-commenced work at o'clock.  
Signature of competent person.

COAL MINES REGULATION ACT, 1896.

Withdrawal of Workmen.—General Rule 7.

Colliery, Seam, District.  
Part of the above-named District found to be dangerous by the person for the time being in charge  
Danger arising by reason of

## GENERAL RULE 5

*Report of Inspection of Machinery, &c.*

## Pit or Tunnel—Surface examination.

At                      o'clock in the                      of                      190 .

I (or we), the undersigned, being the competent person (or persons) duly appointed for that purpose have carefully inspected (as required by General Rule 5), and report as follows :—

External parts of the machinery  
Guides and Conductors  
Headgear  
Ropes  
Chains  
Other similar appliances  
Remarks (if any)

Signature of competent person

NOTE.—In making this Report write *safe* or *unsafe*, and if *unsafe* state cause and the steps (if any) taken to remedy the matter.

Form No. 13—Coal Mines.

Colliery.

## GENERAL RULE 5.

*Report of Inspection of Machinery, &c.*

Pit or Tunnel—Underground Examination. At                      o'clock, in the                      of                      190

I (or we) the undersigned, being the competent person (or persons) duly appointed for that purpose have carefully inspected (as required by General Rule 5), and report as follows :—

External parts of machinery  
Guides and Conductors  
Ropes  
Chains  
Other similar appliances  
Remarks (if any)  
Signature of competent person

NOTE.—In making this Report write *safe* or *unsafe*, and if *unsafe* state cause and the steps (if any) taken to remedy the matter.

## COMPLAINTS.

During the year several complaints were received, which were all investigated and reported upon. One of them, made in connection with several matters at the Newcastle Coal-mining Co.'s "A" Pit, resulted in an inquiry being held under section 22 of the Coal Mines Regulation Act, by Mr. C. G. Wade, Barrister-at-law, whose conclusions were as follows :—

- (1.) Anthony Wear was burnt by an ignition of firedamp on 25th September, 1898.
- (2.) The Manager (J. Croft) and the Under-Manager (H. Croft) became aware of that circumstance shortly after the event.
- (3.) The Manager and Under-Manager concealed this circumstance from the proper authorities.
- (4.) J. W. Taft was overcome by blackdamp in the pit about June or July, 1898.
- (5.) Taft's accident became known to the Manager and Under-Manager on or about 14th April, 1899.
- (6.) Neither the Manager nor the Under-Manager took any steps to inquire into Taft's case until the end of May.
- (7.) The general system of ventilation in the pit is satisfactory.
- (8.) On 18th July, 1895, the air-courses were obstructed for the purpose of deceiving the Government Inspector, Mr. John Dixon.

(9.)

- (9.) There is not sufficient evidence to connect the Manager or Under-Manager with this charge.
- (10.) No charge can be made against the integrity of Mr. John Dixon.
- (11.) The mine in places where the workings pass through dykes or faults is likely to give off firedamp, but it cannot be called a "gassy mine."
- (12.) Blackdamp exists in certain parts of the mine, but the system of ventilation, if properly applied, is sufficient to render it harmless.
- (13.) The discipline is disgraceful.

The result of this was that an inquiry was held under section 10 into the conduct of the Manager and the Under-Manager, by His Honor Judge Fitzhardinge, one of the District Court Judges. The Judge's decision on the charges against the Manager and Under-Manager were respectively as follows:—

As to the Manager (Jos. Croft)—

Charges Nos. 1, 2, 3, 4, and 5. I find these charges proved.

6. I do not find this charge proved, though I find that Joseph Croft, having cause to doubt the correctness of a report made in pursuance of General Rule 4, in the report book kept for that purpose, improperly wrote a protest on that report.

7 and 8. I find these charges proved.

9 and 10. I find these charges not proved.

11. I find this charge proved that the discipline of the mine was defective, in so far that the General Rules of the Act and the Special Rules of the Colliery were not enforced.

As to the Under-Manager (H. C. Croft)—

Charges Nos. 1, 2, and 4. I find that these charges were proved.

Charges 3, 5, and 6. I find that these charges were not proved.

7. I find this charge proved. He, as Under-Manager, was responsible under the 3rd Special Rule for the discipline of that portion of the mine under his charge.

I accordingly have to find that Joseph Croft has shown himself, by incompetence, and gross negligence, unfit to discharge his duties as Manager.

Since these inquiries were first set on foot, I understand that the discipline in the mine has been materially altered, and that the General Rules under the Act and the Special Rules of the Colliery are now being complied with. Bearing that in mind, and also that no serious injury has resulted by the lax discipline, as before stated, and as it has been proved that Joseph Croft has been a successful Manager for a number of years, that he had never before been called upon to answer any charge of any kind, and taking into my consideration that he has about 800 men under his control and in his care, some of them for very many years, and that accidents have been few, although the mine has been a difficult one to develop, many faults and dykes in the coal seams being frequently met with;—in my opinion the justice of the case, under all the circumstances, will be met by my formally suspending the certificate of Joseph Croft for a nominal time, *i.e.*, till the rising of the Court, and by ordering him to pay the costs of this Inquiry, which has been rendered necessary by his default. As the more serious charges have not been proved, the amount of those costs should be limited to £60, and I order accordingly.

As it has been proved that Herbert Claude Croft has been an energetic and industrious Under-Manager, and that the work for which he was responsible has been well performed, though not in accordance with the Act, that he had never before been called upon to answer any other charge,—in my opinion the justice of the case, under all the circumstances, will be met by formally suspending his Certificate for a nominal time, *i.e.*, till the rising of the Court, and by ordering him to pay the costs of this Inquiry, which has been rendered necessary by his default. As the more serious charges were not proved, the amount of such costs should be limited to £40, and I order accordingly.

#### FIRES UNDERGROUND.

During the year fires have occurred underground in the A. A. Co's. Borehole Pit and in the Vale of Clwydd Colliery; the former fortunately was soon discovered and put out, but the latter got such a hold on the coal, that it was deemed necessary to close the pits down for three months.

Having regard to the quantity of dry inflammable material to be found in the pits, such as brattice cloth, bark of timber, &c., and to the unprotected character of the lights used underground in most of the Collieries, and the occurrence of the fires just referred to, points to the necessity of suggesting measures likely to prevent similar occurrences in the future, and with this object in view I beg to direct the attention of Colliery Managers to the following points:—

1. The adoption of a light less exposed than the ordinary Scotch miner's lamp, especially for persons whose duties require them to move about, such as wheelers, drivers, &c.
2. The removal of loose, easily inflammable barks from the timber before being sent down the pits.
3. The adoption of a non-inflammable brattice.
4. The advisableness of requiring an official to go round the pit to see that all lights are extinguished, after the workmen have gone out.

#### PROPOSED SPECIAL RULES IN LANCASHIRE, ENGLAND.

Mr. Henry Hall, Inspector of Mines for the Liverpool District in England, in his Annual Report, for 1898, gives the following Special Rules, which he has proposed to the Employers, most of which, with slight alterations he hopes to see adopted.

1. A copy of such Rules as apply to his work shall be handed to each work-person.
2. The Certificated Manager shall mark, or cause to be marked, on the Working Plan the position of every Lamp Station, and the date of the last survey.
3. The Certificated Manager shall see that all dangerous parts of the machinery, both above and below ground, are securely fenced.
4. Timber shall not be withdrawn from the Waste except by means of the gablock and chain; and wherever timber is being withdrawn the gablock and chain will be at hand ready for use.
5. Where the timbering of the coal places is done by the workmen themselves, an ample supply of suitable timber for this purpose shall be constantly kept in the working place itself.
6. All coal-getters must have sufficient timber in their places to serve the shift; and any coal-getter found without such spare timber shall have his place fenced off and be sent out of the mine.
7. The Certificated Manager shall so far as the coal working places are concerned, specify by a notice kept posted on the front of the weigh-cabin, the maximum distance apart for props, or other supports, for each seam or district of a seam.

- 8. The miners shall strictly observe the regulations as to timbering, and the under-lookers and firemen shall report to the Manager any neglect.
- 9. A person losing his light shall not continue his work in the dark.
- 10. The "trailer" or "devil" shall be attached in all cases where the full load is drawn against the incline by means of a single rope.
- 11. No person shall have his safety lamps on his belt, or continue to use it after the glass is chipped or cracked.
- 12. No unauthorised person shall have in his possession underground any leaden rivet or other apparatus for locking or unlocking a safety lamp.
- 13. Every leaden rivet used for the purpose of securing a safety lamp shall be impressed with a letter, or other recognisable mark.
- 14. Every report made under General Rule 4, shall specify each place where any indication of firedamp or blackdamp was found in the course of the examination to which the said report refers.
- 15. Every steam boiler shall be thoroughly examined, both inside and out, by a thoroughly competent person at least once in three months; and he shall make a true written report of such examination.
- 16. Secure and adequate stop-blocks shall be provided at the top of all jigs, and wherever there is danger of the tubs running loose.
- 17. Wherever railway wagons are so placed as to afford a passage between for work-persons, such passage shall be at least a wagon length.
- 18. A coupling-pole shall be used in every case for coupling and uncoupling wagons.
- 19. Wherever railway wagons are being shunted past or under the screens, the brakesman shall ride on the nearest approaching wagon; and where a locomotive is attached the driver shall keep his whistle going.
- 20. Where the shots are fired by electricity the authorised shot-lighter shall himself fire all shots. He shall couple up the cable to the charge, and whilst doing so shall have the battery with him. He shall also himself couple the cable to the battery.
- 21. The authorised shot-lighter shall have in his possession all detonators and take care that in cases where the men charge their own shots that only the requisite number is handed out.
- 22. He shall comply with the General Rules as to shot-firing, and also the requirements of the Explosives Order.
- 23. Shots shall not be fired on main haulage, or main intake, or main return roads, except with the special permission in writing of the Manager, and the requirements as to watering shall be carefully attended to.
- 24. No missed shot shall be unrammed, but in all cases a fresh hole shall be drilled which shall not be within 12 inches of any hole which has missed fire. Should the missed shot contain a detonator, the shot-lighter shall, before firing the fresh hole, attach a string to the fuse of the missed shot and secure it to a prop. Immediately after firing he shall search the coal, or stone, and until he finds the detonator or is satisfied that it has been exploded by the second shot, shall allow no person to interfere with the coal or stone. He shall make the search with his hands only, and with the greatest care. Should the missed shot not be dislodged, further holes must be drilled and fired until this is effected.
- 25. No shot shall be fired in any hole in which an open break is found. All shots, other than gunpowder, shall be fired by electricity.

These are excellent rules, drawn up after many years' experience, and I beg to direct the attention of Colliery Managers to them, with the hope that they may afford useful hints to ensure greater safety to life and limb amongst the workers in and about the coal and shale mines of the Colony.

AMBULANCE.

The following table affords information in regard to the primary and secondary or advanced classes connected with the New South Wales Government Ambulance Corps which were examined during the year:—

Name of Class.	Number of successful Candidates.	Name of Surgeon-Instructor.	Name of Examining Officer.
Wallsend (secondary) .....	9	Dr. John B. Nash .....	Dr. W. L'Estrange Eames.
Newcastle (primary) .....	14	Dr. W. L'Estrange Eames .....	Colonel W. Williams, P.M.O.
" .....	12	" .....	" .....
Merewether (primary).....	13	Dr. W. Clarke .....	Dr. W. L'Estrange Eames.
" (secondary).....	10	" .....	Colonel W. Williams, P.M.O.

It may be stated that the books, bandages, and blankets required by each class are supplied free of cost. The Corps also provides an instructor and examiner, and where it is necessary to hire a room for the use of the class bears half the expense thereby incurred. Certificates are awarded to candidates who are successful in obtaining the prescribed number of marks in the primary examination, while to those in the secondary or advanced examination silver medallions are awarded.

EXAMINATIONS FOR CERTIFICATES OF COMPETENCY UNDER THE COAL MINES REGULATION ACT, 1896.

The constitution of the Board is as follows:—

Jesse Gregson, Esq., J.P. ( <i>Chairman</i> ), Australian Agricultural Co., Newcastle	}	Mine Owners.
W. Sandford, Esq., J.P., Eskbank Iron Works, Lithgow ... ..		
Thomas Saywell, Esq., J.P., 16 York-street, Sydney ... ..		
D. A. W. Robertson, Esq. J.P., Metropolitan Colliery, Helensburgh ...	}	Mining Engineers.
Richard Thomas, Esq., J.P., Brown's and Duckenfield Collieries, Minmi		
L. B. Blackwell, Esq, J.P., Orwell-street, Potts' Point ... ..		
Adam Cook, Esq., J.P., Wallsend... ..	}	Miners.
J. G. Hutton, Esq., Thirroul ... ..		
David Leake, Esq., Lithgow ... ..		
John Dixon, Esq., F.G.S. ( <i>Vice-Chairman</i> ), Inspector.		
Secretary to the Board—H. D. Wood, Esq., B.A., LL.B., Department of Mines, Sydney.		

The

The examiners appointed by the Board for Appointing Examiners were Messrs. W. Humble, H. Osborne McCabe, J.P., and T. Cater.

Examinations were held at Sydney on the 15th, 16th, and 17th February, and at Newcastle on the 16th, 17th and 18th August, 1899, with the following results :—

	First-class Certificates.		Second-class Certificates.	
	Number of Candidates.	Number of Passes.	Number of Candidates.	Number of Passes.
Sydney .....	7	2	9	5
Newcastle .....	2	Nil.	15	6
Total .....	9	2	24	11

By permission of the Board for Appointing Examiners, the questions put at the written examinations in 1899 are given herewith :—

EXAMINATION FOR FIRST-CLASS CERTIFICATE OF COMPETENCY.

15th February, 1899—9.30 a.m. to 12.30 p.m.

- Marks.
- Arithmetic.
- 7

1.

What is the average annual profit of a colliery when a shareholder entitled to  $\frac{2}{3}$  of the profits receives as his share for two years and four months the sum of £3,598 13s. 5d.?
- 6

2.

In a 6-foot seam of coal the winning places 10 feet wide are being driven at the rate of 17s. 6d. per lineal yard. It is desired to change the system of payment to a rate per ton. What rate per ton would equal the cost per yard, a cubic yard of coal weighing 18 cwt.?
- Geology.
- 5

1.

What in your opinion are the causes which have produced faults, dykes, and other dislocations in coal seams?
- 6

2.

Sketch a section of strata, including a coal seam, through which has passed an igneous dyke. What effect generally has such a dyke on the seam and the strata?
- Surveying.
- 7

1.

A crosscut is to be driven through a series of bords and pillars, and in order to expedite the work it is proposed to drive it from each end and intermediate points also. Explain how you would lay out and start each place?
- 6

2.

Show how to keep the Survey Book by entering six sets of an underground survey along a heading, and show 10 bords on the left and two on the right hand side.
- 6

3.

An incline measures 17 chains, and the slope is  $22^{\circ} 11' 30''$ . What is the horizontal length and what the difference in level, expressed in feet, between top and bottom of incline?
- Ventilation and Mine Gases.
- 9

1.

What power do you prefer for ventilating a mine—fan or furnace—and why? Explain how ventilation is obtained by each.
- 12

2.

Explain clearly the steps you would take to restore ventilation in a mine, aired by a fan, in which an explosion had taken place, bearing in mind that rescue work, to be effective, must be commenced as soon as possible. The top of the upcast is badly damaged.
- 10

3.

What would be the effect on the quantity of air flowing and the height of the W. G. placed on the separation doors in a mine if a fall partly blocked the return airway on—  
(a) the outbye side of the doors?  
(b) the inbye side of the doors?
- 8

4.

If by the application of 5-horse power we obtain 30,000 cubic feet of air per minute, what power would be required to produce 70,000 cubic feet?
- 11

5.

Ventilate the workings shown on the accompanying plans. The coal yields  $\text{CH}_4$ , and you are required to show all doors, stoppings, air crossings, regulators, &c., and to state what kind of lights you would use; if safety-lamps, where you would place caution boards.
- NOTE.—A correct answer to plan No. 1 will gain 4 marks, and No. 2, 7 marks.

15th February, 1899—2 p.m. to 5 p.m.

Coal Mines Regulation Act.

- Marks.
- What are the requirements of the Act regarding—
- 7

1.

Stations and inspection of conditions as to ventilation, &c.?
- 7

2.

Construction of and examination of safety-lamps?
- 7

3.

Use of explosives below ground—  
(1.) If the place where the shot is to be fired is dry and dusty?  
(2.) If such dry and dusty place is part of a main haulage road?
- Winning and Working of Coal and Shale.
- 10

1.

What form of shaft in your opinion is the best, and what size would you make a winding-shaft for an output of 1,000 tons in eight hours from a depth of 2,400 feet? Make a plan of the shaft fittings you would use.
- 10

2.

Show by sketch, both in plan and section, the arrangements of roads, position of haulage-wheels, and cage-guides at the shaft bottom suitable for the above output and depth.
- 8

3.

In a seam worked by bord and pillar, gas is liable to burst the floor and invade the workings in dangerous quantities. What steps would you take to guard against accidents from this source?
- 8

4.

Why is it inadvisable to leave small pillars—  
(a) As shaft supports?  
(b) As supports to roof in ordinary winning?  
Show by sketch what would occur if the pillars were too small.
- 13

5.

What, in your opinion, is the best method of dealing with the dust on dry and dusty roadways; describe in detail?

Machinery,

- Marks.
- Machinery, Boilers, Pumps, &c.
- 10

1.

Should the winding rope be required to raise water in a drawing shaft, show by sketch the arrangements you would make, the apparatus you would use, and state the weight of water you would lift per winding.
- 12

2.

Show by sketch a suitable cap for a round rope,  $4\frac{1}{2}$  in. circumference; describe fully the method of capping a rope of this size. Give the breaking strain and working load when made of improved plough steel.
- 8

3.

A shaft 12 feet in diameter and 260 feet deep has water standing in it to a point 95 feet from the top; after winding water for some time, the surface of the water has been lowered 64 feet; how many units of work have been performed?
- 10

4.

What is meant by initial, mean, and terminal pressure of steam? If your boiler pressure is 60 lbs. per square inch, and your engine has 5 feet stroke, and the cut-off is at one quarter, what are these pressures?

16th February, 1899,—9 a.m. to 12 noon.

- Marks.
- Arithmetic.
- 6

1.

Three mine pumps deliver to bank  $\frac{1}{3}$ ,  $\frac{1}{4}$ , and  $\frac{1}{5}$  of the total pit's water; the remainder, amounting to 365 gallons per minute, flowing off by adit level. Find the total feeder per minute.
- 7

2.

The officers employed at a colliery are .0416 of the whole number of employees; 40 new hands are employed, and the officers become .0375 of the whole number. How many employees and officers were there before the new hands were engaged?
- 6

3.

How many tons of stone (S.G. = 2) are taken out of a sinking shaft  $15\frac{1}{2}$  feet diameter, 200 yards deep; and how many bricks of ordinary size will be required to line it throughout with 9 in. lining?

Geology.

- 7

1.

What do you understand by the terms Anticlinal, Synclinal, Contorted, Conformable, Monoclinal, Periclinal, and Escarpment? Illustrate by sketches.
- 7

2.

Write down briefly your idea of the origin of coal. How is it some part of a coal seam may yield firedamp while other parts are free from it?
- 7

3.

Name the rocks which compose the Carboniferous system in this Colony, and mention two each of the principal fauna and flora found therein.

Surveying.

- 5

1.

Describe the operation of levelling with a dumpy level, and show how you would rule a level-book and write on the headings to the various columns.
- 7

2.

Make a sketch of a vernier, and explain its use when fitted to instruments.
- 5

3.

Sketch on paper as near as you can, without the aid of scale or protractor, the following bearings:—  
N.  $30^{\circ}$  E. 56 links; S.  $39^{\circ}$  E. 73 links; S.  $15^{\circ}$  W. 95 links; S.  $60^{\circ}$  W. 85 links.

Ventilation, and Mine Gases.

- 9

1.

A fan 30 ft. in diameter, and running at 50 revolutions per minute, is producing 125,000 cubic feet of air per minute with a 3" water-gauge. What is the I.H.P. of the engine if the efficiency be 78%?
- 12

2.

What are the precautions which should be taken in arranging for the ventilation of a coal-mine as to length, form, and size of airway, number of splits, crossings, doors, stoppings, &c.?
- 9

3.

At some mines natural ventilation aids the ventilating apparatus, either fan or furnace, while in other mines it acts in opposition to it. How do you explain this, and what can be done in some cases to minimise this opposition.

16th February, 1899—2 p.m. to 5 p.m.

Coal Mines Regulation Act, 1896.

- Marks.
- What are the provisions of the Act with regard to:—
- 7

1.

Cancellation of Certificates?
- 7

2.

Returns, Plans, Notices, and Abandonment?
- 5

3.

Notices as to accidents?

Winning and Working of Coal and Shale.

- 14

1.

What method would you adopt for conveying coal from the workings to the shaft—(a) Where the seam is horizontal; (b) Where the inclination is 1 in 3? Sketch your arrangements.
- 10

2.

Describe the method of working you would adopt at a depth of 600 feet where the seam is level, and of the following section:—

	ft.	in.
Soft shale roof.....	6	0
Coal .....	2	2
Band.....	0	2
Coal .....	3	8
Sandstone floor.		

- 10

3.

If you were working a dry and dusty mine, giving off firedamp, what precautions would you take to guard against an explosion?
- 9

4.

What has been your experience in sinking? Give the dimensions of a walling crib you would use in a finished shaft 16 feet in diameter at a depth of 300 feet. What precautions would you take in sinking below the crib?
- 8

5.

If you were driving a stone-drift to cut a seam of coal which you expected to give off fire-damp, what precautions would you take to guard against a sudden outburst?

Machinery, Boilers, Pumps, &c.

- 9

1.

If you had to wind coal from two stages or "hangings on" in a shaft, what kind of signals would you use, and how would you arrange them so as to avoid confusion in signalling from the two places?
- 8

2.

You have 2,000 tons of water to pump in eight hours, your pump is single acting, 5 ft. 6 in. stroke, working twelve strokes per minute, what diameter of pump will be required, and how many gallons will be lifted per minute?
- 13

3.

Sketch and describe either Walker's or Ormerod's detaching hook. What important difference is there between the action of a detaching hook and that of a steam brake?
- 10

4.

Show by a sketch how boilers are connected to the main steam pipes, showing expansion joints, and stating their object?

## EXAMINATION FOR SECOND-CLASS CERTIFICATE OF COMPETENCY.

15th February, 1899—9:30 a.m. to 12:30 p.m.

Marks.

*Coal Mines Regulation Act.*

What does the Act require regarding—

- 6 1. Ventilation of mines?  
 7 2. Signalling and man-holes for travelling planes worked by machinery?  
 6 3. Securing of roof and sides?

*Ventilation and Mine Gases.*

- 6 1. Name the gases met with in mines, and state how they affect the persons breathing them.  
 6 2. Explain by sketch how you would ventilate a single heading driven from the north side of the upcast shaft bottom : the only available air for that purpose being that coming from the mine, and entering the shaft on the south side.  
 6 3. State the symptoms of asphyxia in the mine, and how you would treat a patient.  
 6 4. If you were called up early in the morning by the Deputy, who informs you that firedamp had fouled one of the districts right back to the flat, what steps would you take to ascertain the cause and remove the gas?  
 5 5. Ventilate the workings on the accompanying plan, stating the materials you would use.

15th February, 1899—2 p.m. to 5 p.m.

*Arithmetic.*

- 6 1. Your output is 1,850 skips of coal per day, the average weight per skip is  $12\frac{1}{2}$  cwt. : What is the output in tons per fortnight of 11 days, and what is the amount of wages if the coal cost 4s. 9d. per ton to produce?  
 5 2. What would it cost to drive a drift 8 feet by 10 feet and 95 yards long if the rate be 11s. 6d. per cubic yard?

*Winning and Working of Coal and Shale.*

- 6 1. Where floor and roof are good, how wide would you prefer to have your main road, and why? Show by sketch how you would put in timber where the road is extra wide for flat or pass-bye.  
 8 2. Describe briefly the precautions you would take in driving winning places towards a goaf likely to contain gas or water.  
 6 3. Show how you would extract pillars 40 yards long and 15 yards wide and 6 feet thick, where the roof and coal are tender and 8-yard bords have been driven and left for some years.  
 6 4. Explain the difference between bord and pillar, and long-wall working, more especially in relation to ventilation, timbering, and producing of coal.  
 8 5. Give a brief description of sinking a 15-foot finished diameter shaft through 25 feet soil and clay, 60 feet moderately hard shale, and 15 feet of hard sandstone, and of permanently securing it.  
 6 6. Sketch the arrangements you consider necessary at the bank-head of a self-acting incline underground.

16th February, 1899—9 a.m. to 12 (noon).

Marks.

*Arithmetic.*

- 6 1. A coal tub 4 feet long, 3 feet 3 inches broad, and 2 feet deep is filled level with coal. Find weight of coal, if a cubic foot of coal equals 50 lbs.  
 7 2. A reservoir is 26 feet 8 inches long by 12 feet 9 inches wide. How many cubic feet will it be necessary to draw off to lower the surface 1 foot? Assuming that 1 cubic foot of water contains  $6\frac{1}{4}$  gallons, how many gallons would have been drawn off.

*Winning and Working of Coal and Shale.*

- 7 1. Sketch the method of timbering you would use in a road 9 feet wide under 8 feet of soft shale, the sides being hard. Give dimensions of timber.  
 8 2. If you had to fire a shot on a dry and dusty haulage road, what explosive would you use, and what precautions would you take.  
 5 3. What are the conditions that should regulate the width of roadways? And show by sketch how you would fix timber to secure the roof of a road that inclined  $45^\circ$ .  
 8 4. What arrangements would you make and what orders would you give to ensure the proper use and treatment of safety-lamps (a) by miners; (b) by other workmen and boys?  
 6 5. What would you do, in the event of a tail-rope breaking during working hours, to keep the work going, and how would you do it?  
 6 6. Describe how you would pack, timber, and carry on a stall in longwall working. At a depth of 600 feet what distance apart would you have the gateways in a 3-feet seam rising 1 in 12?

16th February, 1899—2 p.m. to 5 p.m.

Marks.

*Coal Mines Regulation Act.*

What does the Act provide regarding—

- 7 1. Periodical inspection on behalf of workmen?  
 6 2. Stretchers and ambulance appliances?

*Ventilation and Mine Gases.*

- 5 1. What is the composition of afterdamp, firedamp, blackdamp, carbon monoxide? How would you distinguish each gas?  
 6 2. What are the uses of an overcast, stopping, door, regulator, and dumb-drift? Give advantages and disadvantages of each of them.  
 6 3. A fall of roof takes place in a roadway, leaving a cavity 60 feet long and 5 feet high. If the seam be fiery, what would you do to prevent an accumulation of gas in this cavity?  
 8 4. State what in your opinion is the best way of ventilating sinking pits. Illustrate by sketch.  
 5 5. What is an anemometer, and how do you use it? The velocity of air flowing through a pipe 10 inches in diameter is 1,500 feet a minute, how much air is flowing?  
 5 6. What benefits are derived from splitting the air in a mine?

## EXAMINATION FOR FIRST-CLASS CERTIFICATE OF COMPETENCY.

16 August, 1899.—9.30 a.m. to 12.30 p.m.

*Arithmetic.*

Marks.

- 6 1. In driving a sloping adit 350 yards long 25 yards next the surface were found to be running sand, and cost 25 per cent. per yard more than the remainder, which was in solid ground. The total cost amounted to £1,959 7s. 6d., and you are required to find—(a) cost per yard in sand, (b) in solid ground.
- 7 2. A man by selling out of 3 per cent. Stock at 99 gains 10 per cent. on his investment. At what price did he buy, and what was his income, supposing he realised £15,345?

*Geology.*

- 6 1. Arrange the following in their order of superposition—placing the oldest at the bottom and working upwards:—(1) Newcastle and Bulli Coal Measures, (2) Narrabeen beds, (3) Lower Marine Series, (4) East Maitland Coal Seams, (5) Wianamatta Shales, (6) Greta Coal Measures, (7) Upper Marine Series, (8) Hawkesbury Sandstone.
- 5 2. What are the fossils characteristic of the Hawkesbury and Wianamatta Measures? Give also the origin and distribution of this series.

*Surveying.*

- 7 1. A Colliery Royalty supposed to contain 4,000 acres, with one shaft in course of sinking, has to be surveyed. Explain how you would do the work, stating the instruments you would use, and any special means you would take to check the accuracy of your work. If a sketch will help your answer make one.
- 6 2. What is the horizontal base in feet, and vertical height in feet, of an incline rising 1 in 4 whose hypotenusal measurement is 30.75 chains?
- 6 3. Explain clearly the steps you would take, and to what special points you would direct your attention if sent to a colliery to ascertain the amount of coal extracted from a given area by the bord and pillar system of working.

*Ventilation and Mine Gases.*

- 10 1. What type of fan would you recommend for a mine with long airways which are difficult to maintain of large area? Describe it. What type would you recommend for large airways of moderate length?
- 10 2. What is meant by "mixed lights" in the face workings of a mine? Have you any objection to this system of lighting? If so, what?
- 10 3. How would you ventilate a sinking pit of large area, 1,400 feet deep, if you had neither fan nor furnace? Explain fully, and illustrate by sketches.
- 10 4. What is natural ventilation? Answer fully, stating whether (a) it alone is capable of ventilating a mine in which gas is occasionally met with, (b) it can be relied on for constancy and direction.
- 10 5. Ventilate the workings on the accompanying plans A and C. You are required to show all doors, stoppings, air-crossings, and regulators, and to state what kind of lights you would use. If safety-lamps, where would you place the caution-boards?

16 August, 1899.—2 p.m. to 5 p.m.

*Coal Mines Regulation Act.*

Marks.

What are the requirements of the Act regarding—

- 7 1. Exceptions from provisions as to shafts?
- 7 2. (a) Plan of abandoned mine or seam; (b) Employment of boys?
- 7 3. Manholes on engine planes and other travelling roads?

*Winning and Working of Coal and Shale.*

- 8 1. You are sent to a new district to open out a coal property. What observations would you make before starting to sink?
- 10 2. Give sketches both in plan and section showing dimensions and connections of a good strong cradle for use in a 15 feet diameter finished pit.
- 13 3. Owing to the strata in a sinking shaft bursting and falling away from the sides, it is impossible to cut a ring for a walling crib. State what you would do to make the shaft safe while sinking, and how you would prepare a foundation for walling.
- 10 4. Shot firing is permitted in a dry mine—what explosives would you abstain from using? Give your reasons.
- 8 5. Sketch the best method, in your opinion, of taking out pillars with respect to both safety and economy—(a) with a sandstone roof; (b) with a shale roof. Also state whether it is necessary to leave larger pillars in some mines than others. If so, give reasons.

*Machinery, Boilers, Pumps, &c.*

- 10 1. Wherein lies the danger of scale and incrustation in boilers? How would you prevent such from accumulating, and how often would you clean and examine boilers?
- 10 2. Sketch a battery of 8 feet diameter boilers. Give thickness of plate for a working pressure of 120 lbs. per square inch. Show all fittings and main steam range, with provision for expansion.
- 10 3. How many 4-foot strokes per minute would a 12-inch double-acting pump have to make in order to pump a feeder of 200 gallons of water per minute? The pump to work 18 hours per day, and 10 per cent. to be allowed for "slip."
- 10 4. You require to convey 800 tons of coal to the shaft bottom in 8 hours; the road is undulating (both ends are on the same level), 1 mile long. Describe the method you would adopt for haulage, the power you would use, and show by sketch how you would attach the load.

17 August, 1899.—9.30 a.m. to 12.30 p.m.

Marks.

*Arithmetic.*

- 6 1. Ten acres of clean coal 8 feet thick, of specific gravity 1.25, when got, sell for 8s. per ton, and at this price an average profit of  $17\frac{1}{2}\%$  is obtained. Find the amount of profit in £ s. d.
- 6 2. A colliery proprietor has a certain number of wagons of coal for sale. He sells half the number and 1 more to A, half the remainder and 1 more to B, half the remainder and 1 more to C, half the remainder and 1 more to D, and then he has sold out the lot. What number had he?
- 7 3. A piece of work must be finished in 36 days, and 15 men are set to do it, working 9 hours a day; but, after working 24 days, it is found that only  $\frac{2}{3}$  of the work is done. If 3 additional men be put on, how many hours a day will they all have to labour in order to finish the work in time?

*Geology.*

Marks.

*Geology.*

- 7 1. What is meant by arenaceous, argillaceous, calcareous, siliceous, and carbonaceous? Give a fairly well known rock belonging to each group, stating which are mechanically, and which organically, formed.
- 7 2. Sketch a dyke in your district. State how it affects the coal seams, and where it may be seen at the surface.
- 7 3. What is an unconformity? Mention any well known example you know, or have read of, and state its effect on the life of both flora and fauna of that geological age.

*Surveying.*

- 5 1. What proportion does a chain, drawn on a map of 2 chains to an inch, bear to 66 feet? Convert 5.92 links into feet and inches, and 79 yards 10 feet into links and decimals.

- 5 2. Write down the directions of the above lines with relation to the cardinal points of the compass.
- 7 3. An undulating roadway in a mine has to be made ready to work as a self-acting incline. What, from a surveyor's point of view, is necessary, and how should it be done? If you think a sketch will help your answer, give it.

*Ventilation and Mine Gases.*

- 10 1. Name some of the gases usually met with in coal mines. State their composition and chemical properties. Also their weight, as compared with atmospheric air, with characteristics of each, and their effects on human life.
- 10 2. It is now generally admitted that coal dust is an element of danger in coal mines. With what other factors does it become highly dangerous, and how would you guard against accidents from this source?
- 10 3. Explain how you would make an overcast in a mine to pass 30,000 cubic feet of air. Give its area, and state the kind and dimensions of material used.

17 August, 1899.—2 p.m. to 5 p.m.

Marks.

*Coal Mines Regulation Act.*

What are the provisions of the Act with regard to—

- 5 1. Timbering?
- 7 2. Books and copies thereof?
- 7 3. Water and boreholes?

*Winning and Working of Coal and Shale.*

- 9 1. Assuming that the deputy has found his district all right, what, in your opinion, is the proper way for him to report so as to satisfy the provisions of General Rule 4?
- 10 2. If you had to work a 6-feet seam of fairly strong coal, 500 feet from the surface, with a shale roof, what method of working would you adopt? Show, by sketch, how you would support the roof; also, how you would sprag the coal while holing.
- 10 3. Assuming the same seam, 1,500 feet deep, with, say, 10 feet of shale overhead, what size shaft pillars would you leave, and what system of working would you adopt?
- 12 4. A mine which, when at work, was ventilated by a furnace has been abandoned for a time, and is to be reopened. The seam gives off  $\text{CH}_4$ , which, there is reason to believe, has filled the workings right back to the shafts. Explain, in detail, how you would proceed to remove the gas so that the furnace fire can be safely relighted.
- 10 5. Explain, generally, how you would equip a present-day mine for an output of 1,000 tons a day of 8 hours from a depth of 1,500 feet. Assume the mine to be 10 miles from a shipping port.

*Machinery, Boilers, Pumps, &c.*

- 8 1. Enumerate the steps you would take for the care and preservation of winding ropes. How would you ascertain internal corrosion, and how guard against it?
- 13 2. What size timber would you use in a head-gear 50 feet in height for a load of 8 tons? Show, by sketches, front and side elevation, with arrangement for detaching. The dimensions of each piece of timber shown in the sketches to be given in feet and inches.
- 10 3. It is proposed to put wire-rope guides into a winding shaft, 1,000 feet deep, in which a load of 6 tons is to be wound. How many ropes, and of what size, would you place for each cage? Detail how you would put them on and fasten them.
- 9 4. Sketch and describe good safety-catches for holding the tubs in the cage while being raised or lowered in the shaft. State the size and quality of rope you would use if the load was 6 tons, giving breaking strain. Depth of shaft, 1,300 feet.

## EXAMINATION FOR SECOND-CLASS CERTIFICATE OF COMPETENCY.

16 August, 1899.—9.30 a.m. to 12.30 p.m.

*Coal Mines Regulation Act.*

Marks.

What does the Act require regarding—

- 6 1. Use of Safety-lamps in certain places?
- 7 2. Withdrawal of Workmen in case of danger?
- 6 3. Fencing of abandoned Workings?

*Ventilation and Mine Gases.*

- 6 1. How should an airway be constructed so as to pass a large quantity of air with a small expenditure of power?
- 6 2. State what you know of the properties and character of the gases usually met with in coal mines, giving the composition of each gas.
- 6 3. (a) Which, in your opinion, is the best method of locking Safety-lamps? (b) If a Safety-lamp is extinguished in a mine where should it be relighted? (c) By whom?
- 6 4. (a) By what means would you conduct your return air to the upcast shaft in a fiery mine with furnace ventilation? (b) State where you would connect it with the shaft, giving reasons.
- 5 5. Ventilate the workings on the accompanying plans, B and C, stating the materials you would use for stoppings, doors, &c. State the kind of lights you would use. If lamps, where would you place the caution boards?

16 August, 1899.—2 p.m. to 5 p.m.

Marks.

*Arithmetic.*

- 6 1. Work out an increase of 8 per cent. on the following prices:—2s. 10d. per ton, 8d. per ton, 6s. per yard, 8s. 3d. per shift.
- 5 2. How many tons of rails, weighing 30 lb. per yard, will be required to lay a tram-line 435 yards long?

*Winning and Working of Coal and Shale.*

- 6 1. The roadways of a mine are dry and dusty. What would you do, and how?
- 6 2. Give an account of the method of working to which you have been accustomed, mentioning the means used to support the roof at the face and in the roadways.
- 8 3. The winding machinery breaks down during working hours, and you, being in the mine, have to superintend the sending out of men and boys by the upcast shaft, which is provided with a bucket swinging free in the shaft. What precautions would you take to provide against accident?
- 6 4. (a) Explain the siphon, (b) state for what purposes it is used, (c) and under what conditions it will act properly.
- 8 5. Show by sketch how chocks and props should be set, and how the coal-face should be secured while holing in an 8-foot seam rising 1 in 6.
- 6 6. Show by sketch how to ventilate a pair of winning headings, and state what material you would use, also how you would fix it to conduct the air to the face.

17 August, 1899.—9 30 a.m. to 12 30 p.m.

Marks.

*Arithmetic.*

- 7 1. An incline 446 yards rises at the rate of  $10\frac{1}{4}$  inches in every 20 feet. How much higher is it at the top than at the bottom?
- 6 2. What is the weight, in tons, of an acre of coal 7 feet thick if it is 1.32 times heavier than water? A cubic foot of water = 62.4 lb.

*Winning and Working of Coal and Shale.*

- 6 1. With what material and of what dimensions would you build permanent stoppings to seal off an underground fire? If sketches will help your answer give them.
- 8 2. (a) What precautions would you take when firing a shot on a dry and dusty roadway? (b) What explosives would you avoid using?
- 6 3. Show by sketch how you would support the roof of a gate-road in long wall going outward, and how you would keep up the roof at the face.
- 6 4. Main returns in bord and pillar work have to be maintained in good condition in a seam 6 feet thick, having 4 feet of very bad roof; what would you do? The minimum area to be 60 square feet.
- 8 5. Describe the system of haulage you prefer in a seam, the inclination of which is 1 inch per yard against the load. Sketch in detail your arrangements to work a curve.
- 6 6. How wide would you make an engine flat for 250 tons a day? Show by sketch how you would support the roof, which is soft shale, 10 feet thick.

17 August, 1899.—2 p.m. to 5 p.m.

Marks.

*Coal Mines Regulation Act.*

What does the Act provide regarding—

- 6 1. Daily supervision of mine by manager or under-manager?
- 7 2. Notice to be given of accidents in mines?

*Ventilation and Mine Gases.*

- 5 1. A winning place in a far off district has to be driven over a 20-foot rise fault—gas is given off—bratticing is insufficient. How would you ventilate this place?
- 5 2. An accident occurs during working hours on an engine plane by which an overcast is broken. What would you do? Answer fully.
- 6 3. The quantity of air which must be made to pass through a mine is 190,000 cubic feet per minute. What size must the shaft be so that the velocity of the air in the shaft will not be more than 900 feet per minute?
- 5 4. Give as near as you can the limits within which air and fire-damp form explosive mixtures. What is the important element sometimes present which influences the proportions?
- 8 5. Name the lamp you consider safest for use in a fiery mine. Describe its construction, explain its use, and why it is safe.
- 6 6. A "swelly," 4 feet deep in the centre, and 60 yards long, in one of the returns of a 6-foot seam, is likely to be troubled with water. How would you deal with this?

The following notices were received during the year:—

Dudley Colliery.—On 21st March Mr. H. Humphreys (colliery manager) notified, in accordance with clause 30, sub-clause 3, of Coal Mines Regulation Act, 1896, that it is their intention to recommence working the Dudley Colliery.

Prospecting Shaft.—On 16th June Mr. J. Campbell notified that he was sinking a small shaft on the Wallsend property for the purpose of proving the coal. The shaft is situated about 4 chains to the west of South Wallsend property.

Prospecting for Coal.—On 7th August Mr. Louis B. Blackwell notified, on behalf of the Company, that they were prospecting for coal in portion 4, parish of Lett, county of Cook, being the freehold of Mrs. Francis Mackenzie.

Teralba Colliery, Teralba.—On the 29th August Mr. Andrew Sneddon gave notice that he was resuming operations at Teralba Colliery.

New Winning Colliery.—On the 14th September Mr. Wm. Turnbull (manager for the A. A. Company) notified that he had been making preparations, near the face of the cross-cuts, for driving headings into the sea coal.

Centenary Colliery, Curlewis.—On 20th October Mr. J. J. Poole notified having started a coal prospecting adit, some 270 feet in altitude, above the mouth of old or present tunnel.

Greta Colliery, Greta.—On 7th December Mr. J. Jeffries notified having commenced a small shaft from a point in the present workings, with a view to testing thickness and quality of the lower seam.

Rhondda Colliery, Teralba.—On 20th December Messrs. Wm. Laidley & Co., proprietors, notified that Mr. James Barr, of Plattsburgh, had been appointed manager of the Rhondda Colliery, now being opened out on the property known as Donaldson's, parishes of Teralba and Awaba.

Mr. William Wilson, also of Plattsburgh, a certificated man, will have charge under him.

Cullen Bullen

Cullen Bullen Colliery.—Mr. A. J. Bensusan, on 20th January, notified that he had appointed D. Mosby under-manager of Cullen Bullen Colliery from 21st, *vice* Robert Hutchinson, resigned.

Lambton Colliery.—Mr. Frank Croudace, on 16th February, gave notice that Mr. Thomas Brown had resigned his position of under-manager at the Lambton Colliery, and that Mr. Charles Noble had been appointed to such position in his place.

Side Colliery, Waratah.—Mr. T. J. Evans (colliery manager), on the 16th February had commenced operations on the property leased from the Government by the late Mr. David Watson. In future the mine will be known as Old Waratah Extended.

Side Colliery, Waratah.—Mr. D. R. Watson gave notice that Mr. T. J. Evans, of Wickham, had been appointed manager of Side Colliery, *vice* F. Dent, retired.

Corrimal Colliery.—Mr. D. H. Prosser (*pro* secretary) notified, on 22nd February, of having made a change in the management of the Corrimal Colliery, Mr. Alfred Ernest Oswald Sellers having been appointed manager from 17th instant, *vice* Mr. E. A. Jones.

Greta Colliery.—On the 26th April, 1899, Mr. Jonathan Dixon notified that his responsibilities relative to Greta Colliery ceased from above date.

Wright's Colliery.—On the 6th May Mr. John Baker gave notice that he was about to leave the Colony for a time, and had appointed Mr. John Sawyers to act as manager in his absence, who would be responsible for all royalties and other matters in connection with the pit.

Wright's Colliery, Waratah.—On 6th May Mr. John Sawyers gave notice that he was about to take charge of the mine worked by J. Baker, and applied for a permit to act as manager in his absence.

Greta Colliery.—Mr. A. E. Webb (secretary, Greta Coal Mining Company) notified, on 22nd May, in conformity with Coal Mines Act, of having appointed Mr. Joshua Jeffries manager of Greta Colliery in place of Mr. Jonathan Dixon, resigned.

New Anvil Creek Colliery.—Mr. Benjamin Yates notified, on 30th May, of having employed two (2) men to assist in retimbering a part of the tunnel.

Joadja Shale-mine.—On the 6th June Mr. R. Vernon Saddington (secretary) gave notice of the appointment of Mr. D. Mosby as under-manager at Joadja in the place of Mr. Wm. McMillan.

Killingworth Colliery.—On 6th July Mr. D. McGeachie gave notice that Mr. Pendleton had been relieved of the management of the Killingworth Colliery, and that Mr. A. Littlejohn had been appointed to that position and in charge there.

Ferndale Colliery, No. 2.—Messrs. Morrisson and Bearby notified, on 6th July, that they were about to commence drawing cylinders from Ferndale air-shaft.

East Greta Colliery.—Mr. A. Thomas notified that Mr. Henry Williams had been appointed, and would enter upon his duties on 10th July as under-manager of No. 1 Tunnel.

Rose Hill Colliery, Waratah.—Messrs. Russell Brothers notified, on 21st July, that they had no longer anything to do with the Rose Hill Colliery. Mr. D. Davis has leased the mine from the Caledonian Coal Company.

Gunnedah Colliery.—Mr. Frank Leng (secretary) gave notice that Mr. J. R. Errington had, on 31st July, been appointed under-manager to the Gunnedah Colliery, in accordance with the classification of his certificate under the Coal Mines Regulation Act, 1896.

New Park Colliery, Singleton.—On 17th August, Mr. Wm. Goodhew (colliery manager) notified that, owing to sickness, he had temporarily appointed Wm. Hughes, from Dulwich, in his place.

East Greta Colliery.—Mr. A. Thomas, on 22nd August, notified that Mr. Williams, recently appointed under-manager for No. 1 Tunnel, had resigned, and Mr. Henry Cartwright reappointed, to be under-manager for the whole of the East Greta Colliery.

Stockton Colliery.—On the 22nd August, Mr. Geo. Fletcher notified that Mr. Henry Morgan Williams had been appointed under-manager, in succession to Mr. Robert James Jury, retired.

Ivanhoe Colliery, Pipers' Flat.—Mr. L. Thomas (manager) gave notice, 16th August, that the Ivanhoe Coal Mine had been disposed of by Mr. Raffan, and it is now the property of the New Zealand Mines Trust (Limited).

Vale of Clwydd Colliery.—On 30th August, Mr. Thomas Broughall (manager) notified that, when starting the above colliery again, his under-manager or deputy will be Mr. Edward Frost.

Port Kembla Colliery, near Wollongong.—On 5th September, Mr. W. H. Hurt notified having commenced operations on 25th January, and named the mine Port Kembla Colliery.

South Greta Colliery, Farley.—On the 23rd September, Mr. W. H. Morgan notified having severed his connection as part owner of the South Greta Colliery, Farley, in the district of Maitland.

Gunnedah Colliery.—On 4th October, Mr. Frank Leng (secretary) notified that Mr. James Watson had been appointed manager to the Company (Gunnedah Colliery Company, Limited).

South Greta Colliery.—On 21st October, Mr. James Ralston notified that he was sole proprietor.

Vale Colliery, Lithgow.—On the 4th November, Mr. Louis B. Blackwell gave notice that the Vale Colliery had changed hands, and from that date he was no longer manager.

Dudley Colliery.—On 17th November, the Honorable Alexander Brown, M.L.C., managing director, forwarded the following notice:—"We do ourselves the honor to inform you that the operations of the Dudley Colliery are now being carried on under the style and title of 'The Dudley Coal Company (Limited),' the head office of which is 15, Watt-street, Newcastle. Mr. Henry Forsyth will continue to act as agent for the owners, with Messrs. H. Humphreys and J. Henwood as colliery manager and under-manager respectively."

Osborne Wallsend Colliery.—On 8th November, Mr. E. Vickery notified that he was now the owner of the Osborne Wallsend Colliery, Mt. Keira, Wollongong.

#### NOTICES RECEIVED OF ABANDONED MINES, OR WHERE WORK HAS BEEN DISCONTINUED FOR A TIME.

Louisvale, East Maitland.—On 21st January, Mr. J. Henderson gave notice that he had abandoned Louisvale Colliery from that date.

Cardiff Colliery, Cardiff.—Mr. James Campbell notified, on 21st March, that he had temporarily suspended work; also that all shafts and openings were properly secured.

Quarry

Quarry Colliery, Waratah.—On 4th April, Mr. James Rutley notified that he had abandoned the Quarry Colliery.

Lambton B or No. 2 Pit.—On 8th August, Mr. Frank Croudace notified having discontinued work at the Lambton B Pit. The only work will be keeping the mine clear of water for some little time to come.

Johnson's Tunnel, Tick Hole.—On 18th September, Mr. W. Johnson notified that the tunnel had fallen in on 23rd August; also that he may clear it out when the water drains off.

Side Colliery, Waratah.—On 14th December, Mr. D. R. Watson notified that he had given up the Side Colliery.

Herewith I beg to hand the annual reports of the inspectors, Messrs. J. Dixon, J. Rowan, T. L. Bates, and W. Humble, whose able and willing assistance I beg to acknowledge.

In the performance of my official duties, besides making underground inspections, I was engaged a considerable time in connection with the East Greta inquest, the two inquiries about the Newcastle Coal Mining Company's A Pit complaints, besides several prosecutions relating to the administration of the Coal Mines Regulation Act. It has been necessary to travel 17,500 miles during the year on official duty.

In addition to the above, all the official correspondence passes through my hands, and there is also a good deal of work to do in connection with special reports, as to the protection of railways, roads, waterworks, &c., from the working of coal, and matters relating to mineral leases, mining authorities, royalty accounts, &c.

I have, &c.,

A. A. ATKINSON,

Chief Inspector of Mines.

The Honorable J. L. Fegan, Secretary for Mines and Agriculture.

## SECTION VI.

### INSPECTORS' REPORTS, &c.

#### Mr. Senior Inspector Dixon's Report.

To The Honorable John L. Fegan, Esq., M.P.,  
Secretary for Mines and Agriculture, &c.—

Sir,

Merewether, 30 January, 1900.

In accordance with the provisions of section 21 of the Coal Mines Regulation Act, 1896, I have the honor to submit my report for the year ending 31st December, 1899.

During the term embraced by this report I made 163 inspections, investigated 41 accidents, and travelled about 5,800 miles (exclusive of all underground travelling). I was also engaged eighteen days in Court, had four weeks' sick leave, and the remainder of the time was taken up in writing reports on various subjects, checking coal royalties, and dealing with other matters.

The following is a list of the collieries usually inspected by me, also number of men and boys employed above and below ground.

A.A. Company's No. 2 Colliery.—The work of pillar coal extraction is still being carried on in this mine, and about 90 men and boys are employed.

During the year the Hamilton Pit, near Glebe Hill, has been totally abandoned. Both shafts have been filled in, and the whole of the surface arrangements have been dismantled.

A.A. Company's New Winning.—About 548 men and boys are employed at this colliery. The surface improvements during the year have been very considerable, consisting in the erection of more machinery, travelling belts, &c., and in the addition of three more large steam-boilers.

Newcastle Company's A Pit.—At this colliery about 416 men and boys are employed. During the latter part of the year a great deal of work was done in the pulling down of old screen fixtures and the erection of new screens and weighbridges, with a view to weighing all coal at an early date.

Newcastle Company's B Pit.—About 413 men and boys are employed at this colliery, and during the year the whole of the necessary appliances for weighing all coal were completed, and the system of weighing both large and small coal adopted.

Burwood.—At this colliery 325 men and boys are employed. A new shaft has been completed during the year. The depth is about 600 feet, and it is intended to act as an upcast. A powerful ventilating fan is in course of erection at the surface of this shaft, and when completed will doubtless give good results. This colliery has now four separate and distinct openings to the day or surface.

Waratah.—About 272 men and boys are employed at this colliery. Many improvements both above and below ground have been made during the year. The endless rope system of underground haulage is working splendidly. The ventilating fan at the surface, which is now at work, is a decided benefit to the ventilation; and all coal is being weighed.

Lambton B Pit (late Durham).—This colliery was at work during a portion of the year, and 45 men and boys were employed. When not in full work men were employed keeping the mine free from water and attending to other matters.

New Lambton.—About 59 men and boys are employed at this colliery when in full work. During the latter portion of the year trade was very slack, but during the idle time the workings were kept in good order.

Ebbw Vale.—At this colliery about 32 men and boys have been employed during the year. The Burwood seam of coal is worked at this mine.

Hillside.—The Burwood seam of coal is worked at this colliery, and 7 men and boys are employed.

Shortlands.

Shortlands.—The Burwood seam of coal is worked at this colliery also, and 11 men and boys are employed.

Side Colliery, Waratah.—This mine has been abandoned during the year.

Quarry.—This mine is also now abandoned.

Wright's.—Two persons are employed in this mine.

Bayley's Reward, Lambton.—Three persons are employed at this mine.

Morris's, Lambton.—Three persons employed at this mine.

Electric, North Lambton.—Only 1 man employed at this mine.

Rose Hill, North Lambton.—This mine has been abandoned during the year, and is now worked in conjunction with the Electric mine.

Johnson's, near Cardiff.—One man and 2 boys are employed at this mine.

Kayuga, near Muswellbrook.—Only 2 men employed at this mine.

Centenary, Curlewis.—About 19 men and boys are employed at this colliery.

Gunnedah.—About 46 men and boys are employed at this colliery, and many improvements have been made during the year, with a view to a larger output of coal.

Harbour Colliery.—At this colliery sinking operations are still being carried on at the "Birthday" shaft, and a considerable depth has been reached. About 76 men and boys are employed.

#### *Accidents.*

I investigated thirty-two underground accidents during the year, and I am pleased to be able to state that none of them were fatal. Seven were caused by falls of coal, one by a fall of roof (coal), two by falls of roof (stone), one by bite of a horse, one by kick from a horse, one injured by empty cage, one by a piece of coal falling down shaft, one by premature explosion of shot, one by a piece of stone sliding over in bottom of sinking pit, one by stone rolling off a canch, one by a pick-wound, one by being knocked down by a horse, one by tail-chain against a loaded skip, one by being jammed between limbers and loaded skip, one by falling down after jumping from a moving train of skips, one by a batten on moving trolley, one sprained back whilst filling a skip, eight injured by skips in various ways.

#### *Surface.*

Of the nine accidents on surface, one was caused by falling from a tree whilst getting bushes for sweeping flat sheets, one by a portion of moving machinery, one by the hook of a crane chain, one by falling into a coal bunker, one by an empty skip, one by a prop whilst unloading a truck, one by a loaded skip, one by being run over by a locomotive.

One of the surface accidents was a fatal to a schoolboy named Louis Dobb. This poor little fellow was attending the Newcastle South Public School, and at play-time, on 11th September, he attempted to cross the Newcastle Coal Co's. railway between loaded waggons in motion. He was caught by one of the waggons and killed on the spot. On the day following the accident, the District Coroner, G. C. Martin, Esq., J.P., held an inquest on the body of deceased. I attended the inquest, and fully agree with the verdict of "Accidental death."

I may here be allowed to state that, although notified of this accident, I venture to think that it cannot by any means be considered a mining accident.

#### *Prosecutions.*

There have been no prosecutions of workmen during the year at any of the collieries inspected by me.

#### *Miners' Inspectors.*

The miners' inspectors at the Burwood Colliery have made five inspections during the year, and the miners' inspectors at the Newcastle Co's. collieries have made four inspections during the year.

I have, &c.,

JOHN DIXON, F.G.S.,

Senior Inspector of Collieries.

### **Mr. Inspector Rowan's Report.**

The Honorable J. L. Fegan, Secretary for Mines and Agriculture,  
Department of Mines, Sydney,—

Wollongong, 30 January, 1900.

Sir,

In accordance with section 21 of the Coal Mines Regulation Act, 1896, I have the honor to submit my annual report of inspections for the collieries and shale-mines in the Southern and Western Districts.

The total number of collieries under inspection in the Southern and Western Districts during the year ending 31st December, 1899, is thirty-four.

#### *Present State of Mines.*

Western District—16 coal-mines and 3 shale-mines; Southern District—13 coal-mines; Berrima—1 shale-mine and 1 coal-mine = 30 coal-mines and 4 shale-mines = 34 collieries.

On the 14th October last a fire broke out in the Vale of Clwydd Colliery, about 650 yards from the bottom of the downcast pit. In the absence of a supply of water, and after endeavouring to extinguish the fire, it was decided to seal the pits, and this was done. They were reopened again on the 11th January last, and the fire was found to be extinct, although there was evidence that a very considerable fire had been

been in existence. The cause of the fire was never ascertained; but this accident shows that it is good mining practice to cause an official to go round the mine after the workmen leave to see that no lights or other source of danger are left. This is especially necessary at the week-end, or when work is done on a Saturday.

During the last six months a ventilating fan has been erected at Coal Cliff Colliery, which has greatly improved the ventilation.

Bellambi and Corrimal Collieries are erecting fans for ventilating purposes, and will be ready for use shortly. At present the Metropolitan, Coal Cliff, South Clifton, and South Bulli Collieries are ventilated by means of fans.

#### *Accidents in Mines.*

During the last year, ending 31st December, 1899, I have investigated thirty-two separate accidents, three of which were fatal. All the cases after being investigated were fully reported upon at the time.

I attended the Coroner's Inquest at each of the fatal accidents and heard all the evidence, and fully agree with the verdicts of accidental death as returned by the jury.

In carrying out my official duties I have made 216 inspections underground, and travelled about 11,000 miles.

I have, &c.,

JAMES ROWAN,

Inspector of Collieries.

### Mr. Inspector Bates' Report.

To the Honorable J. L. Fegan, M.P.,

Secretary for Mines and Agriculture, Sydney,—

Sir,

Newcastle, 31 January, 1900.

Pursuant to section 21 of the Coal Mines Regulation Act, 1896, I have the honor to submit my annual report on the coal-mines inspected by me during the year ending 31st December, 1899.

During the year under notice I have inspected at frequent intervals nineteen collieries in the Northern District and one inspection of the following collieries, viz.:—Wallsend No. 2, Wickham and Bullock Island, Maryland, Co-operative, Inganee, Stockton, Thornley, Bloomfield, Marshall's, Brown's, Duckenfield, Seaham, West Wallsend, Dudley, Hetton, Killingworth, South Hetton, Waratah, A.A. Co.'s No. 2, A.A. Co.'s New Winning, Newcastle A Pit, and Sydney Harbour Colliery.

I have also visited Bulli, Corrimal, Bellambi, South Clifton, and Coal Cliff Collieries in connection with the colliery plans.

#### *Collieries.*

Wallsend Colliery, Main Tunnel Workings.—There are 610 men and boys employed at this portion of the Wallsend Colliery. The ventilation is produced by means of a Guibal fan and a furnace, the intakes being the main hauling tunnel, travelling roads, Centennial, and traction shafts.

Lambton Colliery, Lambton.—There are 205 men and boys employed at this mine. The ventilation is produced by means of a furnace, the intakes being the tunnel and various traction shafts.

Elemore Vale Colliery, Wallsend.—There are 48 men and boys employed at this mine. The ventilation is produced by a furnace, the intakes being the main shaft and an air-shaft.

Pacific Colliery, Teralba.—There are 161 men and boys employed at this mine. The ventilation is produced by a furnace, the intakes being the hauling tunnel, travelling road, and a shaft.

Northern Extended Colliery, Teralba.—There are 80 men and boys employed at this mine. The ventilation is produced by a furnace, the intakes being the tunnel and a shaft.

South Wallsend Colliery, Cardiff.—Coal has only been drawn during the months of February, March, and April of the year under notice. Since then nothing except pumping water has been done, in order to keep the mine in readiness for resumption of work. When at work the mine employed about 35 men and boys.

East Greta Colliery, West Maitland.—There are 235 men and boys employed in connection with this mine. Coal is drawn from two tunnels in the lower seam, and three shifts are worked. The air current of No. 1 tunnel is circulated by natural ventilation, but there is a furnace available when necessary. A furnace is in use for ventilating the No. 2 tunnel. During the year a tunnel was driven for the purpose of working the upper seam of coal, but all operations are at present suspended.

South Greta Colliery, Farley.—There are 52 men and boys employed at this mine. The ventilation is produced by a furnace, the intakes being two of the tunnels.

Greta Colliery, Greta.—There are 177 men and boys employed at this mine. The ventilation is produced by a Guibal fan, the intake being the main shaft.

New Park Colliery, Singleton.—There are 75 men and boys employed at the two tunnels in connection with this mine. The ventilation is produced by a furnace, the intakes being the two tunnels.

Dulwich Colliery, Singleton.—There are 9 men and boys employed at this mine, which is ventilated by means of a furnace, the intake being the tunnel.

#### *Collieries Working under Permits.*

Cardiff Colliery, Cardiff.—No coal has been drawn at this mine since January, and all work is at present suspended. When at work, about 22 men and boys were employed.

Teralba Colliery, Cockle Creek.—There are 7 men employed in unwatering the shaft, where work has been suspended for some years.

Northumberland Colliery, Fassifern.—There are 16 men and boys employed at this mine. The ventilation is produced by a furnace, the tunnel being the intake.

Rosedale

Rosedale Colliery, Singleton.—Eight men are employed at this mine. The ventilation is natural, assisted by the heat from a steam-pump, the tunnel being the intake.

Oakvale Colliery, Singleton.—There are 10 men and boys employed at this mine. A small fire suffices to keep the air-current in circulation, the intake being from the tunnel.

Granbalang Colliery, Singleton.—Eight men and boys are employed at this mine. The ventilation is natural, the intake being the winding shaft.

New Anvil Creek Colliery, Greta.—One man is employed at this mine attending to the steam-pump and keeping the mine free from accumulation of water.

Stanford Greta Colliery, West Maitland.—Prospecting is being carried on at two tunnels on the Stanford and Heddon Greta coal properties. There are 10 men and boys employed.

#### *Accidents.*

I have investigated 34 accidents during the year under notice.

There were 4 fatal accidents—3 underground and 1 on the surface—involving the loss of 4 lives, and 30 non-fatal accidents—24 underground and 6 on the surface—causing injury to 30 persons.

Of the fatal accidents, the first occurred to a miner named James Hanlon, at Lambton Colliery, on 1st September, by a fall of roof. An inquest was held, which I attended, and the jury returned a verdict of “Accidental death.”

The second occurred on 30th September, to a miner named George Handcock, at the A.A. Co.’s No. 2 pit, by a fall of roof. An inquest was held, which I attended, and the jury returned a verdict of “Accidental death.”

The third occurred on 9th October, to a shunter named Charles White, at Gunnedah Colliery, by being crushed between waggons whilst shunting on the surface. A magisterial inquiry was held, which I attended, and a verdict returned of “Accidental death.”

The fourth occurred on 20th December, at Greta Colliery, to a miner named William Francis Cotterill, by a fall of roof. An inquest was held which I attended, and the jury returned a verdict of “Accidental death.”

With regard to the non-fatal accidents, 9 were caused by falls of roof and sides, 5 by skips, 4 by explosives, 2 on inclined and engine planes, 1 by fall of stone in sinking shaft, and 3 miscellaneous—underground.

On the surface 3 accidents were caused by falling off staging, 1 by loading rails into waggon, 1 by slipping off waggon, and 1 by kick from a horse.

#### *Prosecutions.*

The Manager of South Greta Colliery instituted proceedings, on 6th February, against a deputy for neglecting to make a report in a book of his inspection of the workings. Defendant was fined 5s. and 4s. 10d. costs of Court, and £1 1s. professional costs.

The Manager of East Greta Colliery proceeded against a miner, on 9th March, for having powder in his place in cartridges, but not in a case or canister. Defendant was fined 5s. and 4s. 10d. costs of Court.

The Manager of East Greta Colliery proceeded against a miner, on 24th July, for carrying a naked light on the cap on his head whilst handling explosives. Defendant was fined 1s. and 4s. 10d. costs of Court.

The Manager of Wallsend Colliery proceeded against four shiftmen, on 24th August, for passing a danger signal in No. 1 tunnel. Defendants were each fined 10s. and 3s. 3d. costs of Court.

The Manager of Greta Colliery proceeded against a miner, on 13th September, for not securely spragging the coal whilst holing. Defendant was fined 1s. and 4s. 10d. costs of Court.

Proceedings were instituted by the Department on 16th February, against the Manager of East Greta Colliery, for breach of section 47, General Rule 4 (1), of the Coal Mines Regulation Act, 1896. The case was dismissed. An appeal was made, and a special case stated for the Supreme Court, which case was also dismissed.

Proceedings were also instituted by the Department, on 16th February, against the Under-manager of the East Greta Colliery, for breach of Special Rule No. 17, “that he did not examine the air current of No. 1 Tunnel,” and also for breach of Special Rule No. 3, in “that he did not visit every working-place in the mine daily.” The former charge was withdrawn. The defendant was fined 10s. and 6s. 8d. costs of Court for the second offence.

#### *Inspections by Workmen.*

General Rule No. 39.—Two inspections have been made of the Wallsend Colliery main tunnel workings during the year, in accordance with General Rule No. 39.

#### *General Remarks.*

In the discharge of the duties above enumerated I have made 141 inspections, investigated 34 accidents, have been occupied 16 days at inquests and 6 days at Court, and have travelled 6,885 miles to and from the various coal-mines, in addition to a considerable amount of walking underground.

I have, &c.,

THOS. L. BATES,  
Inspector of Collieries.

Mr. Inspector Humble's Report.

To the Hon. J. L. Fegan, Esq. M.P.,  
Secretary for Mines and Agriculture.

Hamilton, 14th January, 1900.

Sir,

I have the honor to report that, in pursuance of section 21 of the Coal Mines Regulation Act, 1896, I have exercised the duties of an Inspector of Collieries in the Northern District during the twelve months ending 31st December, 1899.

In doing so I have inspected the collieries set out in the following table, which shows also the number of days inspection given to each colliery, and, for those regularly inspected by me, the approximate number of men and boys employed above and below ground :—

No.	Name of Colliery.	Approximate number of men and boys employed above and below ground.	Number of days' inspection given to each.
1	Hetton .....	428	19
2	Stockton .....	326	17
3	Wickham and Bullock Island .....	331	13
4	Dudley .....	260	8
5	Wallarah .....	235	5
6	Morrisett .....	7	5
7	South Hetton .....	3	2
8	Killingworth .....	62	6
9	West Wallsend .....	349	13
10	Seaham .....	357	15
11	Brown's No. 2 .....	410	{ 6
12	Brown's No. 4 .....		{ 10
13	Duckenfield .....	317	10
14	Co-operative .....	413	15
15	Maryland .....	44	5
16	Wallsend No. 2 .....	43	10
17	Thornley .....	4	7
18	Bloomfield .....	16	5
19	Marshall's .....	1	3
20	Ingance .....	6	5
	Burwood, 2; Wallsend No. 1, 3; Lambton, 3; Greta, 2; East Greta, 2; South Greta, 3; Stanford, 1; Northumberland, 1; Pacific, 1; Northern Extended, 1; Elemore Vale, 1; South Wallsend, 1; New Park, 1; Granbalang, 1; Dulwich, 1; Oakvale, 1; Rosedale, 1 .....		26
		3,642	205

In addition to the 205 inspections made, I have been in attendance at Police Courts and at inquests 13 days; in the Coal-fields Office and the Department of Mines, Sydney, 77 days; and engaged in examination work for Certificates of Competency on 16 days; making in all 311 days for the year.

Accidents.

The number of accidents I have investigated is exactly the same as in 1898, viz., 46. Then, there were 4 fatals, involving the loss of 18 lives, and 42 non-fatals, injuring 46 persons; while for the year ending December last, there were 3 fatals and 43 non-fatals. The 3 fatals caused the death of 3 persons; 1 at Wickham and Bullock Island Colliery, where a miner on his way out-by was fatally crushed between a horse train of full tubs and the side of the road, while he was attempting to get upon it either to ride or to pass over it on to the other side of the roadway; 1 at Brown's No. 4 Colliery by a piece of stone falling upon the foot of a shiftman engaged with others in cleaning out a return airway. The injury itself was not very severe but tetanus setting in he died in the Newcastle Hospital six days later. One at Dudley Colliery by fall of "back-end" coal while deceased lay holing.

Of the non-fatals, 1 was by ignition of firedamp; 9 by falls of side; 7 by falls of roof; 2 by ignition of powder; 1 on engine plane; 12 by trams and tubs, and 5 sundries. There were 6 surface accidents—5 on railway sidings and tramways, and 1 miscellaneous.

The injuries caused by falls of roof and side are 16 as against 15 of the previous year. None of them call for special remark. The two by ignition of powder show that powder is handled somewhat carelessly by workmen. One, where the burns were rather severe, was caused by a miner having half a plug of compressed powder in his trouser's pocket while lighting a shot. It is not known whether a spark from the fuse he had lighted or a spark from his lamp found its way into the pocket. The other was caused by one pair of miners, at the end of a cavit, leaving half a plug of powder on the rubbish by the side of the bord, where it was lighted by the open lamp of one of the incoming men who sat down on the rubbish to trim his lamp and undress.

The other accidents, including 12 by trams and tubs, occurred from a variety of causes, as set forth in the list given to the Chief Inspector for his report.

On the 30th March, a miner, 65 years of age, named John Absolom died in his bord in the Stockton Colliery. An inquest was held and the medical and other evidence went to show that death was due to natural causes, and the verdict was, therefore, to that effect. On the morning following the death, I inspected the bord and its surroundings and am satisfied there was nothing in the atmosphere of that part of the mine to cause death. The face of the bord was reasonably well ventilated.

Ventilation.

Ventilation.

At the time of last inspection of each mine the ventilation was satisfactory. During the year two more fans have been started—one, a Schiele, 10 feet in diameter, at Brown's No. 2 Colliery, the other, a Guibal, 30 feet in diameter and 10 feet wide, at Killingworth. The following table shows the motive power now producing ventilation at each mine :—

Stockton	...	...	...	30 feet Waddle.
Dudley	...	...	...	" "
Seaham	...	...	...	" "
Hetton	...	...	...	30 ft. x 10 ft. Guibal.
West Wallsend	...	...	...	" "
Killingworth	...	...	...	" "
Wickham and Bullock Island	...	...	...	16 ft. x 6 ft. "Walker" Guibal.
Brown's No. 4	...	...	...	12 feet Schiele.
Brown's No. 2	...	...	...	10 " "
Duckenfield	...	...	...	5 feet Schiele and furnace.
Wallsend No. 2	...	...	...	Furnace.
Maryland	...	...	...	"
Co-operative	...	...	...	"
Wallarrah	...	...	...	"
Morrisett	...	...	...	Natural.
South Hetton	...	...	...	"
Thornley	...	...	...	"
Bloomfield	...	...	...	"
Marshall's	...	...	...	"
Inganee	...	...	...	"

From measurements made in some of the larger mines I find that the amount of air entering the working districts ranges from 50 to 78 per cent. of the total entering the mine. In many cases the remainder is doing useful work in stables, engine-rooms, and in circulating through old and "back-by" workings.

In mines where firedamp is occasionally met with, and more especially in the winning places, splendid currents of air are to be found at the faces. Quantities ranging from 5,000 to 8,400 cubic feet per minute have been found at the brattice end, a few feet from the face.

In such mines where small quantities of firedamp are liberated from almost every facing freshly exposed, and where naked lights are used, the miners have been asked to report without delay to the officials all ignitions of gas at their shots or lights. Many of these ignitions appear very trivial to the miner, but yet they may be very important to the management as a guide in future working and ventilating.

To report these ignitions is a duty they owe to themselves, and it is to be hoped they will regard it in that light. Many of the Special Rules stipulate that they shall do so.

Closely connected with the matter of ventilation are the inspections of the mine by two of the workmen, as per General Rule 39.

It would appear that this right the men possess is not now exercised so much as in previous years. In some of the large collieries, miners' inspections practically ceased when the present Act came into force in October, 1896.

The following table will show what has been done in this respect during last year :—

Seaham	...	...	...	9 inspections.	
Wickham and Bullock Island	...	...	...	9	"
Hetton	...	...	...	7	"
Wallarrah	...	...	...	7	"
Duckenfield	...	...	...	5	"
Wallsend No. 2	...	...	...	2	"
Stockton	...	...	...	1 inspection.	
Brown's No. 2	...	...	...	1	"
Brown's No. 4	...	...	...	1	"
West Wallsend	...	...	...	1 only, and that shortly after the Dudley explosion in March, 1898.	} Previous inspection in 1897.
Co-operative	...	...	...	None since 1893.	
Dudley	...	...	...	None.	
Killingworth	...	...	...	"	(Only just developing.)
Maryland	...	...	...	"	

The remaining six mines are small, employing only a few men each. There has been no inspection at any of them.

Safety-lamps.

At the present time there are two mines using safety-lamps—Dudley and Killingworth.

After remaining idle for twelve months following the explosion in March, 1898, the former mine resumed work on the 4th April, using safety-lamps in all parts of the mine except the downcast shaft bottom and on the main roads. Killingworth is just developing, and safety-lamps are used in all parts except the downcast shaft bottom.

The lamps are of various types, but all bonneted. A very good light is obtained by using a mixture of, in the case of one, 5 parts colza and 1 kerosene; in the other, 4 parts China and 1 kerosene.

Shot firing is permitted at both places, compressed powder being used at Dudley and electronite at Killingworth. Ordinary fuse is used in each case, and the shots fired by a deputy or some other official appointed for the purpose.

Notable Work in Mines.

Stockton Colliery.—In 1895 the No. 3 shaft, situated about 1¼ mile north of the winding and upcast shafts, was connected with the ocean workings. Being to the rise of many of the working-places, it affords a ready way out in cases of emergency. It is 290 feet deep and 9 feet in diameter, and until March of last year

year (1899), had a cage in it capable of carrying four men. Then the manager replaced the cage by a ladder which, it is thought, will be more efficient as a means of men getting quickly out of the mine. This ladder is vertical, and made of iron. The frame,  $2\frac{1}{2}$  inches by  $\frac{1}{2}$ -inch and 14 inches wide, is in sections, and fastened together by fishplates, the whole being securely clamped and bolted to hardwood buntons, 6 inches by 3 inches, placed 20 feet apart. The rungs (of round iron  $\frac{5}{8}$ -inch in diameter and 10 inches apart) are passed through the frame and riveted on the outside. Stages or platforms at intervals of 20 feet are provided as rests or passing-places.

I have ascended this ladder, and consider it equal, if not superior, to the cage as a means of escape. Some of the officials and workmen have also travelled it, and, so far as I know, are quite satisfied with its stability and efficiency.

*Spontaneous Combustion at Thornley Colliery.*

During the year unmistakable signs of heating were discovered in a disused part of the mine, the fumes of CO issuing from pitfalls and a shaft close by. To seal off the affected part, six brick stoppings were built, and two shafts and the pitfalls filled in. On my last inspection this work had been completed, and it appeared to have been well and satisfactorily done.

*Ferndale abandoned Shafts.*

My Annual Report for 1898 referred to the fact of a fire existing in some part of the workings, and that it had been decided to fill in both shafts with debris as a means of extinguishing it. Messrs. Morison & Bearby, ironfounders, of Carrington, undertook to do this work, providing they were allowed to take out, for their own use, the cylindrical lining of each shaft. The owner of the land agreed, and the work, after proceeding intermittently during the year, was finished in October last. Both are now filled up level with the surface. From the No. 1 or larger shaft, 94 of the 150 feet of lining have been recovered; from the other, 10 of the 60 feet. The surface deposit is a running sand about 60 feet deep, and the intrusion of this into each shaft at this level put a stop to the extraction of cylinders.

*Exemptions.*

Contrary to my expectations, expressed in last year's Report, the Killingworth Colliery found it necessary to ask for an extension of the exemptions from the provisions of General Rules 26 and 28, regarding cover over head and guides. An extension of six months was given, expiring on 30th June, by which time the cages were at work, and, therefore, there was no necessity to renew it.

Wallsend No. 2 Colliery applied for and was granted exemption from the provisions of the Act requiring each mine to have two shafts or outlets. The working back of pillars cut off the second outlet, and the mine now has exemption under sec. 45 (b), so long as not more than twenty persons are employed below ground at any one time.

*Abandonment.*

Louis Vale, a small mine in the East Maitland district, was abandoned in January last.

*Commencement.*

In December, Messrs. William Laidley & Co. notified the commencement of their new mine, to be named the Rhondda. It is situated on land lying between Killingworth Colliery and the Sydney-Newcastle railway. Mr. James Barr is to be the manager, and Mr. William Wilson under-manager.

*Prosecutions.*

(By direction of Minister.)

On the 15th June, the manager of South Greta Colliery was proceeded against for breaches of General Rules 1 and 14. He was fined £1, and 4s. 10d. costs in each case.

On the 7th July, the managers of Seaham, West Wallsend, and Wickham and Bullock Island Collieries were proceeded against for breach of section 38, in failing to weigh all coal. The former was fined £3, 8s. costs of Court, and 19s. witnesses expenses, while the latter were fined £5 each, with similar costs.

On the 15th December, the manager of Dudley Colliery was proceeded against for similar breaches of the same section. He was charged, 1st, with failing to weigh; 2nd, with failing to pay by weight. Fined £2, 5s. 6d. costs of Court, and £5 5s. professional costs in each case. Being dissatisfied with the decisions, he is appealing to the High Court.

(By Managers against Workmen.)

On the 8th February, Seaham manager proceeded against a miner for breach of Special Rule *re* continuing to work in a place in which an ignition of gas had occurred; fined £1, and 4s. 10d. costs of Court.

On the same date, manager of Brown's No. 4 Colliery proceeded against a miner for breach of General Rule 23, *re* spragging coal; fined 10s., and 4s. 10d. costs of Court.

On the 15th June, manager of the Co-operative Colliery proceeded against:—Miner for breach of General Rule 12 (e), for unramming a missed shot; fined 10s., and 5s. 6d. costs of Court. Miner for breach of Special Rule 19, *re* disobeying orders by riding on train of tubs; fined 5s., and 5s. 6d. costs of Court. Wheeler for same offence as above; same fine. On the 17th July, he proceeded against a miner for breach of Special Rule 26, *re* spragging of coal; fined 10s., and 5s. 6d. costs of Court.

On the 11th August, manager of Dudley proceeded against a miner for breach of Special Rule 75, by carrying matches into the mine; fined 10s., and 4s. 10d. costs of Court.

On the 20th August, manager of Duckenfield proceeded against a miner for breach of Special Rule 79, by passing a danger board; fined 10s., and 4s. 10d. costs of Court.

*Distance travelled.*

In the performance of my duties during the year I have travelled (exclusive of the distance underground) 5,780 miles by train, tram, boat, coach, and saddle.

I have, &c.,

WILLIAM HUMBLE, F.G.S.,  
Inspector of Collieries.

## ANNUAL REPORT OF THE GOVERNMENT GEOLOGIST.

Sir,

Geological Survey Branch, Department of Mines and Agriculture,

14 January, 1900.

I have the honor to submit my report on the work of this Branch during the year 1899.

The work connected with the Prospecting Vote having been relegated, to a very great extent, to the Inspectors of Mines, the officers of the Geological Survey have been enabled to devote more of their time to their legitimate duties than was possible in past years; at the same time, it has been necessary to deal with a considerable number of Lands Department papers, requiring much travelling, and the inspection of reserves for mining purposes, the cancellation or reduction of which was contemplated.

*Publications.*—During the year the following publications have been issued by this Branch:—

“Records of the Geological Survey of New South Wales,” Vol. VI, Parts 2 and 3. Part 2 contains—(a) An article on the alleged evidence of glacial action in the Ashford Coal-field; (b) Note on the Geology of the Hill End Gold-field; (c) Article on the Saddle Reefs of the Hargraves Gold-field; (d) On the occurrence of a Cyclopteroid Fern in the carboniferous rocks of New South Wales; (e) On the occurrence of Phosphatic Deposits in the Jenolan Caves; (f) Notes and Analyses of some New South Wales Phosphatic Minerals and Phosphatic Deposits; (g) The Australian Geological Record for the year 1897, with addenda for 1891–96. Part 3 contains descriptions, with plates, of the corals of the Tamworth district.

“Memoir No. 1, ‘Ethnology Series,’ by Mr. W. D. Campbell, on the aboriginal carvings of Port Jackson.

“Mineral Resources,” Nos. 5 and 6; also a second edition of No. 3. No. 5 consists of a report, accompanied by a geological map, on the Wyalong Gold-field, by Mr J. A. Watt, Geological Surveyor.

No. 6, by Mr. J. E. Carne, Geological Surveyor, is a very carefully compiled work on “The Copper-mining Industry and the Distribution of Copper Ores in New South Wales,” and has been very favourably received by the public. The success which has attended the issue of the Mineral Resources series has rendered it necessary to publish a second edition of No. 3, viz. “Notes on Gold-dredging,” by Mr. J. B. Jaquet, geological surveyor.

“Mineral Resources,” No. 7, on mercury ore in New South Wales, and No. 8, comprising a geological survey and report of the Hillgrove Gold-field, is nearly ready for publication, and others of the series are in course of preparation.

Mr. Geological Surveyor J. A. Watt resigned his appointment on the 31st March last, and as a result of a competitive examination, Mr. E. C. Andrews, B.A., was appointed to succeed him on the 1st July. During the past twelve months my time has been occupied in the routine work pertaining to my office and in inspections and geological observations in the field. I visited the following places, viz.:—Forest Reefs, Gundagai, Murrumburrah, Inverell, Newstead, Boggy Camp, Borah Creek, Bundarra, Drake, Emmaville, Tent Hill, Kingsgate, Burragorang, Broken Hill, Oallen Crossing, Albury, Tarrago, Wyalong, Yalgogrin, Lucknow, Rosedale, Orange, Wollongough, Nurraburra, Mittagong, Lithgow, Pokolbin, Wallerawang, Irondale, Stuart Town, Abercrombie River, Hillgrove, Dora Dora, Port Kembla, Lyndhurst, &c.

On my recommendation boring operations have been undertaken by the Government at Black Range, Albury, at Gundagai, and at Wyalong, with the object of discovering auriferous deep leads. Successful results have been obtained at Black Range, where the existence of two auriferous deep leads have been demonstrated, and further experiments are being carried out with a view of finding the deepest parts of the gutters as well as the width of the leads. It will then remain for private enterprise to sink a shaft and determine the richness of the deposit. At Gundagai boring operations across the valley of the Murrumbidgee were not so successful; a few colours of gold were obtained, but no defined lead was found to occur, and the depth of the made ground (100 feet) is probably too great to allow of the employment of gold dredges. At Wyalong the boring operations which have been carried out so far have also been unsuccessful. Nevertheless there are very strong reasons for believing that auriferous alluvial deposits must have resulted from the denudation of the gold-bearing reefs of that field, and it is proposed to carry out further experiments with a view of locating them.

Copies of a number of reports submitted by me during the year are appended.

*Work of the Geological Surveyors.*—Mr. Geological Surveyor J. E. Carne, F.G.S., in addition to completing his comprehensive report on “The Copper-mining Industry,” spent a considerable portion of his time in field work. He furnished also the following reports:—

1. On a deep lead at Log Paddock, near Mudgee.
2. On “Larry’s Hill Copper-mine, Wisemen’s Creek.
3. Second report on Yulgilbah Cinnabar Mines, Upper Clarence.
4. On portion of the Cudgegong River Channel for dredging purposes.
5. On a proposed reservation for Mining purposes in the parish of Belubula, county of Bathurst.
6. On a proposed deep test of the auriferous heathlands of the North Coast.
7. On proposed boring for deep auriferous leads at Urana.
8. On the Tuglow Copper and Mount Werong Silver Mines.
9. On the Albert Water Holes and Orange Plains Copper Mines.

Mr. Geological Surveyor J. B. Jaquet, A.R.S.M., F.G.S., has been engaged during the greater part of the year in examining and mapping the iron ore deposits of the Colony, with the object of preparing a comprehensive monograph on this interesting subject. There has been much controversy in the past on the question as to whether New South Wales possesses deposits of iron ore of sufficient extent and richness to warrant capitalists in starting the iron smelting industry, and it is with a view of settling this important question that I have instructed Mr. Jaquet to undertake the work upon which he has been, and is at the present time, engaged. The results of the examinations already made by Mr. Jaquet are not so satisfactory as could have been desired, however a good many deposits still remain to be inspected, and with a view of assisting in the work of forming an estimate of their value the Government is carrying out prospecting operations in the shape of shafts and bore holes.

Mr.

Mr. Jaquet has prepared a geological map of the Mittagong district, and also one of the bauxite and aluminous iron deposits at Wingello; he has also furnished the following reports:—

1. On the discovery of deposits of bauxite.
2. On the clay deposits of Boxer's Creek, near Goulburn.
3. Preliminary report on the ironstone deposits in the parish of Falmash, near Piper's Flat.
4. Progress report on prospecting operations upon the Fitzroy iron deposit near Mittagong.

Mr. Geological Surveyor J. A. Watt was engaged, during the early months of the year, upon a geological survey of the Hillgrove Gold-field. He resigned his position on the 31st March, leaving this work uncompleted.

Mr. E. C. Andrews, B.A., was appointed geological surveyor to succeed Mr. Watt, and after being employed for some weeks on routine work, he proceeded, on the 9th August, to Hillgrove, to complete the survey of that gold-field. He has prepared a very interesting report, which, together with the geological map embodying his own and Mr. Watts' work, will shortly be issued as No. 8 of the Mineral Resources Series. Mr. Andrews has also made several inspections and recommendations in connection with questions referred to this Department by the Department of Lands.

Mr. E. C. Whittell, late field assistant, was employed during the greater part of the year in connection with the prospecting vote, and in supervising the boring operations at Black Range, Gundagai, and Wyalong. He has recently been appointed an Inspector of Mines, having been successful in a competitive examination of candidates for that position.

Messrs. L. F. Harper and M. Morrison, field assistants, have rendered efficient assistance in the field, the former having accompanied Mr. Jaquet, and the latter Mr. Andrews.

The Curator and Mineralogist, Mr. G. W. Card, A.R.S.M., F.G.S., has rendered valuable service in the arrangement of the Museum collection, in petrological examinations in connection with the geological survey, and in the examination of minerals and rocks for the public generally. He also performed the clerical work in connection with the assaying of ores, &c., and has prepared a number of collections of minerals and rocks for schools and other institutions.

The Palæontologist and Librarian, Mr. W. S. Dun, has shown much energy and care in the discharge of his duties, which include the determination of fossils collected by members of the staff, or sent in by the general public; the making up collections of palæontological specimens for exchange with foreign institutions, schools, &c.; the reading and correction of proofs of the publications of the Geological Survey; the conduct of exchanges, and the clerical work connected therewith; the arrangement and management of the departmental library, &c.

Mr. Oliver Trickett, surveyor and draftsman, has also carried out his duties in a most satisfactory manner. In addition to making periodical visits to the various limestone caves, and recommending and supervising such alterations as appear to be necessary for the comfort of visitors, he has prepared nearly all the plans and sections required to illustrate the reports of the field staff, and has continued to chart the geological map of the Colony up to date.

It affords me much pleasure to record my appreciation of the manner in which all the officers of this branch have striven to add to the usefulness and completeness of our work.

I have, &c.,

EDWARD F. PITTMAN,  
Government Geologist.

The Under Secretary for Mines and Agriculture.

#### APPENDIX 1.

##### Report on the Victory Mine, Forest Reefs.

I HAVE the honor to report that I have inspected the underground workings of the Victory Mine, Forest Reefs. In this mine an alluvial lead occurs under basalt. The washdirt is about 4 feet thick, and has yielded an average of about 6 dwts. of gold per ton, being treated in a battery of ten stamps. The mine has been at work about two years, and a considerable quantity of wash has been extracted, as shown by the accompanying tracing from the working plan.

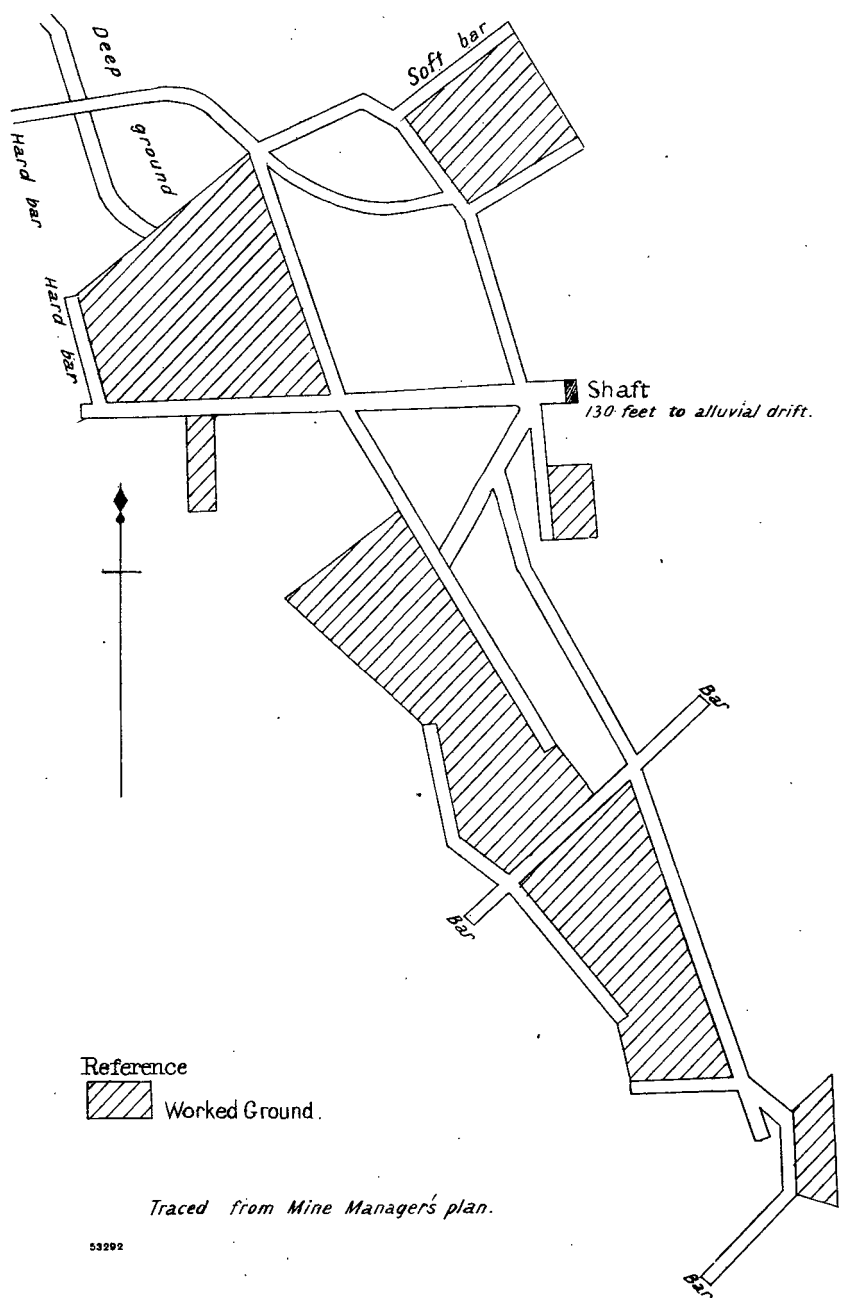

The depth of the shaft to the alluvial wash is 130 feet, and the sump extends for about 10 feet below that. The original working capital of the company is stated to have been £2,000, and the value of the gold won to date is £5,073. This amount has all been expended in wages, and I understand that the sum of £734 is still owing upon the machinery.

The mining operations have not been conducted in a scientific manner, and the result is that the workings are now in a very unsatisfactory state. The shaft was not carried deep enough in the first instance, the levels being opened out at the depth of the washdirt, while no deep level was provided in the bed rock below the drift for drainage purposes. The bottom of the old river channel is very irregular, and at the northern end of the workings it is found to be dipping rapidly into the floor of the level, so that under the present conditions of the mine it is impossible to drain off the water, or to work further in the direction of the dip of the lead. Moreover, the excavations are rapidly becoming unsafe, owing to falls of the roof, fracture of the mine timbers, and to creep. The wash rests on a false bottom of puggy clay, which in places contains a large percentage of carbonaceous matter, derived from decomposed wood and plant remains, and as there are no means of draining the water from this clay, it affords a most insecure foundation for the mine timbers. (It is possible that a second deposit of auriferous drift may occur below this false bottom, though no proof has been afforded of this). Sufficient protection was not provided for the shaft, by reason of the work of excavating the auriferous wash being commenced close alongside it, and the consequence is that the whole of the workings are now sliding to the west. The lower 35 feet of the shaft is considerably out of plumb, and the timbers in the levels and working places are fracturing in all directions owing to the strain.

In order to satisfactorily work the mine, it will be necessary to reconstruct the lowest 30 feet of the present shaft and sink it 30 or 40 feet lower in the hard bed rock. It will also be necessary to put in deep levels below the drift in directions north and south. Mr. Newman, M.P., is desirous of having Government aid for sinking the shaft, and for driving under the drift, as he states that the funds of the company are exhausted.

In

Plan of workings  
Victory Mine Forest Reefs  
Scale 0 32 64 Feet

In my opinion it is only by means of the proposed work that the mine can be placed in a satisfactory condition, and the continuation of the lead in a northerly direction can be worked.

It is for the Prospecting Board to say whether they can recommend Government aid for the purpose, in view of the fact that the carrying out of the work will provide employment for a number of miners whose services will otherwise, in all probability, be dispensed with.

E. F. PITTMAN,  
Government Geologist.

The Under Secretary for Mines and Agriculture, 12 January, 1899.

#### APPENDIX 2.

Report on an application to lease a large area of land at Gundagai.

I HAVE the honor to report that I have inspected the alluvial flats along the Murrumbidgee River, in the vicinity of the town of Gundagai, in connection with an application by Mr. Patrick Heffernan for a lease of about 1,000 acres for gold-mining purposes.

Mr. Heffernan, in support of his application for such a large area, contends that any auriferous leads which may exist below these river flats must be very deep and wet. He estimates their depth at 400 feet from the surface, and asserts that in order to successfully cope with the difficulties which are likely to be met with in exploiting them, a large amount of capital will be necessary, and that this can only be provided in consideration of a large area of land being leased by the Government.

In my opinion there are good reasons for supposing that auriferous leads exist below the river flats in question. No less than three important leads have been traced through the surrounding country to the edge of the flats, and there is also evidence showing that superficial deposits of alluvial gold have in several localities been worked on the banks of the river.

The most recently worked of the three principal leads just referred to is that known as the Jackalass. This lead junctions with the eastern bank of the Murrumbidgee River to the east of the racecourse, and its approximate course is shown on the accompanying lithograph by a red line. The greatest depth of sinking on the Jackalass lead was about 40 feet. The wash (which contained numerous waterworn quartz pebbles up to 18 inches or 2 feet in diameter) varied in width from 15 to 60 feet, with an average thickness of 18 inches. It yields on an average from 15 to 18 dwts. of gold per load, but in places the yield was as high as 2 oz. per load. Other runs of gold-bearing shingle were found to branch off from this lead near its junction with the river, and these show that the old lead had several mouths where it joined the main river channel.

The Spring Creek lead which enters the racecourse flat from the north and north-west was worked a considerable time ago. This lead formed the drainage channel leading from Mount Parnassus in Tertiary times, and in it was deposited the gold derived from the denudation of the auriferous reefs which are known to exist in that mountain. The deepest workings on the Spring Creek lead are said to have been from 50 to 60 feet. I understand that the run of rich gold in this lead gave out as it approached the river flats, and this may have been due to its having encountered a much stronger current at the spot where the ancient creek entered the main river channel.

The Jones' Creek lead was also worked some considerable time ago. It enters the Murrumbidgee flats on the western side of the town, and its depth probably does not exceed that of the other two leads already mentioned. It received the gold derived from the denudation of the auriferous reefs lying to the north-west of Gundagai, such as the Prince of Wales and other reefs which are now being, or have recently been worked. Both the Jones' Creek and the Spring Creek leads contained rich deposits of alluvial gold.

There is very little evidence to be obtained other than that of a geological nature, in regard to the question of the depth at which the auriferous leads under the river flats may be expected to occur.

A shaft was put down by Mr. Todd on the racecourse, near the river bank, and opposite the mouth of the Jackalass lead. This shaft bottomed at 60 feet, on what is said to have been a diorite bar, and prospects were obtained which I am informed were equal to  $\frac{1}{2}$  grain of gold to the dish.

I could only hear of one bore having been put down to test the flats south of the town. This was also done by Mr. Todd, and a depth of 40 feet only was reached. The bore is said to have cost £43, owing to the difficulty of penetrating the boulder wash with the hand augur which was employed.

While, therefore, there are sufficient reasons for believing that auriferous leads exist under the river flats in the vicinity of Gundagai, there is no evidence to support Mr. Heffernan's contention in regard to the depth of the deposits. On the contrary, the evidence afforded by the shaft and the bore appears to me to merely bear out the geological evidence which I should deduce from the reported depth and positions of the Jackalass, the Spring Creek, and the Jones' Creek leads, which must clearly have formed tributaries to any main lead which may be in existence under the river flats. It is a fair assumption from these facts that the depth of the main lead should not exceed 100 feet. In any case, I hardly think the Government would be justified in conceding such a monopoly of the alluvial ground around the town of Gundagai, until better evidence has been supplied in support of Mr. Heffernan's assertion in regard to the depth of the deposits he proposes to work.

In view of all the circumstances of the case, I would recommend that before any of the land be leased a line of bores be put down by the Government, to test the depth and character of the alluvial lead. Probably the best direction for such a line of bores would be as shown by the line AB on the lithograph with the papers.

E. F. PITTMAN,  
Government Geologist.

The Under Secretary for Mines and Agriculture, 17/1/99.

#### APPENDIX 3.

Occurrence of Telluride of Gold in New South Wales.

IN November last I reported the discovery, by Mr. Blakemore, the General Manager of the Prince of Wales Mine, at Gundagai, of the peculiar variety of gold known as *mustard gold*, which is one of the characteristic products of the celebrated Kalgoorlie Mines, and which is produced by the decomposition of telluride of gold. I made a special trip to Gundagai for the purpose of examining the Prince of Wales Mine, but failed to detect any telluride of gold. I reported, however, that it was probable that telluride

of

of gold would be found at the deeper levels. Subsequent to my visit, Mr. Blakemore forwarded for examination some specimens of a mineral which proved to be telluride of bismuth (tetradymite), and which had previously been detected in several localities, viz., Captain's Flat, Oberon, and Uralla.

Within the last week Mr. John Howell handed me some specimens from the Prince of Wales Mine, which had all the appearance of telluride of gold, and which, after careful testing by the Curator, have proved to be such. The specimens came from the 300-feet level of the Prince of Wales Mine, and were rich in free gold. Tetradymite was also present, and, I am inclined to think, at least two varieties of telluride of gold—probably (judging from appearance) calaverite and either coloradoite or kalgoorlite. The specimens, however, were not large enough to enable the variety to be definitely determined by analysis. The discovery of these rich ores of gold in this Colony is a matter of great importance to the mining industry, and the opening up of the Prince of Wales Mine at deeper levels will be watched with great interest.

E. F. PITTMAN,  
Government Geologist.

The Under Secretary for Mines and Agriculture, 28/1/99.

#### APPENDIX 4.

##### The discovery of Bauxite deposits.

IN reference to Mr. James S. Bray's letter on "aluminium" in this morning's issue of the *Sydney Morning Herald*, I desire to point out that several inaccuracies occur in the statements, which are attributed to this department. In the first place the report which I submitted recently made no mention of the "*mineral aluminium*." It stated, however, that the mineral bauxite, from which the *metal* aluminium is manufactured, has been discovered in large quantities in the Wingello district, by Mr. Jaquet, and in the Inverell district by myself. No mention was made of the county of Cumberland, nor does bauxite occur, so far as I am aware, within that county. *Clays* are, of course, known to occur there plentifully, but the expense of manufacturing the metal aluminium from clay would be too great to allow of the latter substance being used commercially for the purpose at present.

It may be as well to explain that while clay consists essentially of hydrous silicate of alumina, bauxite contains alumina (or oxide of aluminium) in the free state; that is to say it is not in chemical combination with silica, and hence the metal aluminium can be manufactured very much more cheaply from bauxite than from clay. Aluminium was originally manufactured from cryolite, a mineral which only occurs in quantity in Greenland. At the present time the metal is made chiefly from bauxite, a small proportion only of cryolite being added as a flux.

If bauxite has "been known to exist in the county of Cumberland for the last twenty years," as stated by Mr. Bray, I can only say that I have not been able to find any record of the fact, and I should feel exceedingly obliged if he could refer me to one, and send me a sample of the mineral.

E. F. PITTMAN,  
Government Geologist.

The Under Secretary for Mines and Agriculture, 15/4/99.

#### APPENDIX 5.

##### Report on the Silver Mines at the Peaks, Burragorang.

I HAVE inspected the silver lodes at the Peaks, Burragorang, in connection with an application by Mr. Bartlett to have the road from Basin Creek to the Peaks made by the Government, and have the honor to submit the following report:—

##### Geological Section of country to the east of The Peaks.

The silver lodes occur in quartz porphyry, which here forms the floor of the permo-carboniferous coal basin. The whole of the valley of the Wollondilly River was at one time covered by the Upper Marine beds, the Upper Coal Measures, and the Hawkesbury Series, but all these rocks have been removed by denudation from considerable areas of the valley, leaving the underlying porphyritic rocks and the argenteriferous galena lodes which intersect them exposed at the surface.

The silver bearing lodes were discovered about twenty-five years ago, and a considerable area of land was taken up at that time for the purpose of working them, but they were soon afterwards abandoned owing to lack of facility for treating the ore. In 1893 some of the land was again taken up, and a galena lode, known as Cuneo's lode, in the parish of Colong, county of Westmoreland, was worked to a depth of 40 or 50 feet. A report on the prospects of this lode was furnished by me on the 14th January, 1894, and was published in the Annual Report of the Department of Mines for that year. I found that the lode varied in width from an inch or two up to 2 ft. 6 in., and that in its widest part it contained an average of 17 ozs. 14 dwts. of silver per ton, and about 11.62 per cent. of lead. I stated that the ore would require to be concentrated before it would be in a fit condition for smelting, and in view of that fact, the distance from the railway, and the extremely rough nature of the country, it was not probable that the lode could be profitably worked.

More recently two other lodes have been discovered, one by Mr. Webb and the other by Mr. Bartlett, on Mr. H. C. Manning's conditional lease, and a number of authorities to mine have been granted; the establishment of smelting works at Dapto and Cockle Creek has enabled the owners of these mines to have a practical

practical test of the value of the ores, and although the expenses of cartage, railway freight, and smelting charges have proved a severe handicap, the results have shown that the prospects of the field are considerably more promising than they were on the occasion of my last visit.

Bartlett's Mine (authority No. 2) is the one from which the most satisfactory results have, so far, been obtained. Two shafts have been sunk to depths of 106 feet and 127 feet respectively, on the underlie of a lode, which strikes about east and west, and dips to the south at an average inclination of about 25°. About 350 tons of ore have been forwarded from this mine to the Dapto and Cockle Creek smelting works; the complete returns were not available, but 220 tons have yielded 11,388 oz. of silver, 25 oz. gold, and 12·83 tons of lead.

The lode is very variable in width, thinning out to 1 inch in places, and occasionally widening to as much as 5 feet. The character of the lodestuff is also variable, for in places the channel is almost entirely filled with rubble or mullock, in others it is formed of quartz impregnated with argentiferous galena, and again in others extensive bunches of massive galena, carrying a high proportion of silver, almost entirely replaces the quartz.

In shaft B the lode was followed from the surface and widened out from 1 inch to 5 feet in thickness; the ore was of poor quality until a depth of 50 feet was attained, when good galena ore was obtained on the western side of the shaft, and an area of ground 45 feet long with an average width of about 20 feet has been stoped out. At the present time the lode is looking extremely well in the face between the points *a* and *b*, a width of 18 feet, on the plan above. It consists of a thickness of 2 ft. 6 in. of nearly solid galena (with streaks of quartz), carrying 100 oz. silver and 5 dwt. gold per ton, and 28 per cent. of lead. Below this is a band of mullock, 1 ft. 9 in. wide, and underneath this again is a thickness of 1 ft. 6 in. of solid fine-grained galena carrying 30 per cent. of lead, with 100 oz. of silver and 5 dwt. of gold per ton.

In shaft A the lode contains a thickness of from 8 to 18 inches of solid galena, carrying 26 per cent. of lead, 104 oz. of silver, and 6 dwt. of gold per ton. Specks of copper pyrites can be occasionally seen in the galena, as well as traces of ruby silver ore.

In Webb's Mine the lode has a north and south strike and dips to the west at an angle of about 20°. It varies in thickness from 4 inches to 2 feet, with occasional bunches up to 9 feet in thickness of quartz containing a fair amount of galena with some stains of carbonate of copper.

In general characters this lode very much resembles Bartlett's, except that its course is almost at right angles to the latter. More development work has been carried out on Bartlett's lode, and consequently more solid galena ore has been discovered. I was informed that 60 tons of ore were sent away from Webb's Mine, and realised £600.

In Hilder's claim, an east and west lode, which is probably identical with Bartlett's, has been opened to a depth of 80 feet on the underlie, exposing about 1 foot thick of solid galena. Four and a half tons of this ore were sent to the smelting works and yielded 77 oz. of silver and 5 dwt. of gold per ton, with 14·8 per cent. of lead.

There are several other claims in which similar lodes are being prospected, but the amount of work done is not sufficient to enable an opinion to be formed as to the permanence or richness of the deposits.

The cost of cartage of the ore from the mines to the nearest railway station is at present £2 5s. per ton. The road from the Peeks to Wollondilly River is in an extremely bad state, the grades being very steep and the tracks rough.

I understand that the Works Department objects to improving this road, on the ground that the permanence and value of the deposits have not been satisfactorily demonstrated. With this contention I feel bound to agree. From the description of the deposits already given it will be gathered that they are very variable in width and composition, and the rich galena occurs in bunches, which may or may not be found to increase in number and size as the deposits are followed down. Sufficient work has certainly not been done to establish their permanence in depth, and it must be borne in mind that the proposed road will lead to nowhere except to these mines.

On

On the other hand, it cannot be denied that Bartlett's lode is of a very promising character, and there are several other lodes in the vicinity which may be expected to yield equally good returns when more work has been carried out upon them; they are undoubtedly worth further prospecting, judged by their appearance at and near the outcrop. Under these circumstances I am of opinion that the miners are not unreasonable in asking the Government to lighten the disadvantages under which they labour in regard to the carriage of the ore to the railway.

I would, therefore, suggest that the regulations under the Prospecting Vote be amended, so as to permit of some of the money being used for the construction of roads, as is done in the colony of Victoria.

Mr. Bartlett states that about £600 would be required to carry out the suggested improvements to the road; and there can be no doubt that, while it remains in its present condition, it will be a great factor in retarding the development of this silver-field.

24 May, 1899.

The Under Secretary for Mines and Agriculture.

E. F. PITTMAN,

Government Geologist.

#### APPENDIX 6.

##### *In re* Testing for Alluvial Deposits at Wyalong.

IN his report on the Wyalong Gold-field—published in the Mineral Resources Series—Mr. Geological Surveyor Watt alluded to the "Absence of alluvial gold," and gave several reasons to explain why such deposits have not been formed at Wyalong.

In my letter of 21st January last, transmitting Mr. Watt's report for publication, I traversed his conclusions (in regard to the absence of alluvial deposits) in the following terms:—

"With regard to the question of alluvial deposits, it is, I think, premature to assert that such deposits do not exist in the neighbourhood, though it is a fact that they have not yet been discovered. The difficulties in the way of finding alluvial leads in such flat country as that surrounding Wyalong are very great, seeing that the surface presents no features that would serve as guides to prospectors. The same difficulties exist in portions of Western Australia, where alluvial gold was not discovered for a considerable time after the lodes had been proved, and where, I feel convinced, many more alluvial leads will yet be found.

"There can be no doubt that very extensive denudations of the Wyalong district took place in Tertiary times; the present configuration of the surface supplies proof of this, and further evidence is afforded by the existence of a Tertiary basin, at least 900 feet thick, which exists near the junction of the Murray and Darling Rivers. The average annual rainfall of Wyalong is 13·63 inches, but there is reason for believing that in Tertiary times the rainfall in Australia was very much greater than it is at the present day. The altitude of Wyalong is nearly 800 feet above sea level, and, I think, therefore, that there must have been, during the Tertiary period, well defined channels through which the drainage of this elevated district found its way to the sea, or to the basin or lake just alluded to, the bottom of which is at least 1,300 feet below the present level of Wyalong. In such drainage channels the gold derived from the denudation of the auriferous reefs must have been concentrated, and I venture to think, therefore, that alluvial leads will yet be discovered in this district."

There is no doubt that the easiest method of discovering deep alluvial deposits in such extremely flat country would be by boring, and, in view of the difficulties I have alluded to, it is unlikely that prospecting operations for deep leads will be undertaken by ordinary miners. The discovery of alluvial deposits at Wyalong, however, would be of such importance to the community that I venture to suggest to the Minister the advisability of putting down a series of bores, to be paid for out of the Prospecting Vote, with the object of locating the old drainage channels which I cannot help thinking are in existence.

E. F. PITTMAN,

Government Geologist.

27 June, 1899.

The Under Secretary for Mines and Agriculture.

#### APPENDIX 7.

##### Report on Rock Cracks at South Head.

Department of Mines, Sydney, 26 July, 1899.

IN accordance with the request of the General Officer Commanding the Military Forces, I have the honor to furnish the following report on the question of the stability of the site upon which a fort is now being constructed near South Head, Port Jackson.

I have made several careful inspections of the excavations which have been made for the fort, and have also examined the face of the cliffs on the ocean side. The accompanying tracing has been made from a plan of the fort, supplied by Captain Owen. I have marked upon it the positions of the various cracks, as well as a bed of shale to which it will be necessary to refer in this report.

The first thing to which my attention was directed was a bed of shale, which can be seen at the base of the excavations between the points AAA, and I was informed that it had been represented to the military authorities that there was a danger of the fort slipping into the ocean on account of the greasy nature of this shale.

It is evident, however, that the beds of rock of which the cliff is composed, and which belong to the series known as the Hawkesbury Sandstones, have a distinct dip landwards—that is to say, in a direction between west and south-west. The shale itself is not continuous for any great distance, and forms a lenticular bed having a maximum thickness, as far as can be seen, of about 2 feet. The dip of this shale-bed conforms with that of the enclosing beds of sandstone, and it is seen to be at least 2 feet higher on the ocean side of the excavation than it is on the western side. It is clear therefore that there can be no danger of the overlying rocks slipping into the sea, owing to the presence of this shale, since they could only do so in opposition to the law of gravitation.

There are several cracks visible in the vicinity of the excavations, and of these the one marked BB is the widest, and, therefore, at the first glance, the most formidable. It has a width of 1 foot. I am of opinion, however, that there is no reason for alarm on account of the presence of this fissure, which, on investigation, can be seen to have had a perfectly natural origin, and to be merely local in its occurrence.

The

PLAN  
 shewing position of cracks and fissures in cliff near  
 South Head

Photo-lithographed by  
 W. A. Gullick, Government Printer,  
 Sydney, N.S.W.

The fissure is situated within a few feet of a small overhanging bluff, about 8 or 10 feet high, from the base of which the land slopes gradually towards the west. At the bottom of the bluff a bed of clay is visible, and I was informed that this bed has been followed in for a short distance, and has been found to thin out rapidly as it extends under the bed of sandstone. The fissure probably coincides with one of the natural joints of the rock, and I am of opinion that the widening out of the joint has taken place very gradually, and has been caused by the falling over, westward, of the face of the little bluff, owing to the shrinking of the clay underneath its base during periods of dry weather. This opinion is borne out by the fact that the western edge of the fissure occupies a higher position than the eastern edge, showing that the rock to the westward has swung over as if it had been pivoted. An examination of the face of the cliff also leads to the conclusion that this fissure does not extend (otherwise than as a natural joint) to any depth.

Sketch showing Fissure in Section.

The most serious cracks are those situated at CC and DD. The crack CC is 4 inches wide, and extends across the floor of a passage (nearly 9 feet), and up the walls on either side for a height of 4 feet. It is, however, not continuous to the surface in the western wall, and appears to stop short at the division plane between two beds. The northern side of this fissure appears to be about an inch higher than the southern side, but no evidence of any sliding movement can be seen, nor does the overlying bed appear to have been affected in any way. The fissure is probably of great age, for both its walls are coated with a deposit of peroxide of iron. It is very difficult to satisfactorily account for the formation of such a wide opening in the midst of these solid sandstone beds; it may possibly be due to a strain caused by the hydration of an underlying bed of shale or clay, by the percolation of water through a joint; or, again, it may represent a joint which has been widened by the concussion resulting from a blast. An inspection of the cliff on the extreme eastern side of the excavation, shows a crack or joint which is probably the continuation of the one in question. It is, however, only continuous through the two uppermost beds of sandstone, and there does not appear to be any reason for assuming that the crack CC, situated, as it is, in the centre of a large mass of rock, continues, otherwise than as a joint, for any considerable depth.

The crack DD extends across the floor of the same passage; it is, however, comparatively unimportant, being only a fraction of an inch in width, and not extending into the bed above.

At FF are several joint fissures varying in width from  $\frac{1}{2}$  inch to  $1\frac{1}{2}$  inch. They are very limited in their vertical extension, only penetrating one narrow bed of sandstone.

The cracks EE are traceable on the surface for a considerable distance, but do not appear to be of very much importance, and I do not think they have any direct connection with the fissure CC.

The Hawkesbury rocks in this neighbourhood are traversed by two sets of joints. The most important of which have a nearly north and south direction, while the course of the other series is nearly at right angles to the first. These two series of joints are of special interest in connection with the question under consideration, because they have a direct influence upon the wearing away of the ocean face of the cliffs. The rocks at the base of the cliff are eroded in the following manner:—The spray from the ocean soaks into the crevices, and into the interstices between the sand grains, and the salt, crystallizing there as the moisture evaporates, loosens the grains, which are then easily washed away by the action of the waves. A somewhat similar process goes on in the beds of shale, with the result that the cliffs become undermined, and ultimately assume the profile shown in the sketch. The undermining process continues until the weight of the overhanging mass becomes too great for the cohesion of the rocks, and the result is a fall, the boundaries of the falling material being determined by a joint belonging to one or other of the two series alluded to.

Section of Cliff.

The outline of the coast in this neighbourhood thus presents a more or less step like appearance, in plan, the steps being formed owing to the action, just described, taking place along the two series of joints almost at right angles to one another. Sometimes the joints do not extend through the uppermost bed, and consequently when the fall takes place an overhanging shelf of the upper bed of sandstone is left, as at A in the sketch section above.

It is impossible to give any definite idea of the rate at which this destruction of the cliff face takes place. It is, without doubt, an exceedingly slow process, and in the immediate vicinity of the South Head forts there are no signs of falls, on any considerable scale, having taken place in recent years. While, therefore, there can be no doubt that the foundations of the present forts will eventually be destroyed by marine denudation, there is no reason to apprehend that their destruction will occur in the near future. It is, of course, impossible to calculate, even approximately, how long a life the fort now being constructed may be expected to have, but I see no reason for doubting that it will last for 50 or 100 years, and it may last for a very much longer period.

The site which it is proposed to use as the foundation for the gun appears to be solid, and although, as already stated, the origin of the fissure CC is not absolutely clear, I can see no reason for assuming that it will increase in width in the future.

Plan of Outline of Coast.

In the event of its being decided to proceed with the work of construction, it would be advisable to stay the sides of the cracks with strong wrought-iron or steel cramps (*e.g.*, bent steel rails) let some distance into the stone on each side, and to fill up the fissures as far as possible with cement. There is also a large block near the top of the cliff (at the point G on the plan) which shows a fracture along a current-bedding plane. This could probably be materially strengthened by boring vertical holes through the fracture, putting in strong iron bars, and filling up with cement. It is not suggested that these cramps and bars would be strong enough to prevent fracture after a movement had once started, but they would be sufficient, in many cases, to prevent the initial movement. In conclusion, I am inclined to the opinion that blasting operations may have had a great deal to do with the opening of the fissure *cc*.

In view of the serious nature of the considerations involved in this question of the stability of the fort, I deemed it advisable to obtain another opinion, and I therefore consulted my friend and former colleague, Professor David, of the Sydney University. This gentleman very kindly accompanied me to the South Head on two occasions, when we carefully examined the site for the new fort, and viewed it from the land as well as from the ocean, and I have his permission to state that he entirely agrees with me in the above opinions, and does not consider that the safety or stability of the fort are likely to be affected by the existence of these cracks for a considerable period of time, such as fifty or a hundred years, or more. The destruction of the cliff by marine denudation will progress, very slowly, in a series of falls, but the foundations of the guns will be secure for a very long period after the destruction of the present cliff face.

EDWARD F. PITTMAN,  
Government Geologist.

The Under Secretary for Mines and Agriculture.

#### APPENDIX 8.

##### Auriferous Deposits at Rosedale.

Geological Survey Branch, Department of Mines and Agriculture, Sydney,  
9 August, 1899.

In company with Mr. Geological-Surveyor Andrews and Mr. Warden King, I have made an inspection of the auriferous deposits at Rosedale, near Orange, and have the honor to report as follows:—

The deposits are situated on alienated land, viz., portions 8, 9, 16, 138, and 139, parish of March, county of Wellington, at a distance of about 6 miles from Orange, on the road to Ophir. A considerable number of authorities to mine have been granted by the Warden, and prospecting operations thereon are being proceeded with, but very little work in the way of proving the extent or permanence of the ore bodies had been done at the time of my visit. The lodes in which the gold has recently been found, giving rise to the present rush, are close alongside some deposits which were taken up about twelve years ago and prospected for silver. Gold was first discovered, in the new deposits, in what is known as Shorter's Hill, authority No. 136, a claim of 10 acres. In this claim an open cut, about 8 or 10 feet deep, and from 30 to 40 feet wide, has been made and 13 tons of gossanous material (consisting of soft decomposed rock, stained by peroxide of iron and intersected by quartz veins) were extracted from this and crushed at the Lucknow battery for a yield of 17 dwt. per ton; the tailings from this crushing were found to contain at the rate of  $6\frac{1}{2}$  dwt. of gold per ton, and were purchased, on assay, by Mr. Lock, the General Manager of the Wentworth Gold-fields Proprietary.

At the time of my visit, another bulk sample of 20 tons from the open cut was being loaded for transmission to the battery. A sample of this, consisting of a number of fragments taken by me from different parts of the waggon load, was afterwards assayed in the Department laboratory and yielded as follows:—

Gold	...	...	...	...	...	A trace.
Silver	...	...	...	...	...	8 dwt. 17 grs. per ton.

Another sample, taken by Mr. Geological-Surveyor Andrews, yielded:—

Gold	...	...	...	...	...	5 dwt. 10 grs. per ton.
Silver	...	...	...	...	...	A few grains per ton.

Besides the open cut there were several excavations in the nature of costeaning trenches, being made across the deposit. A number of samples from different positions were crushed and washed in our presence, and in each instance what appeared to be fair prospects were obtained.

It is impossible, in the present state of the workings, to distinguish by inspection the payable portions of the deposit from those which are poorer in gold values. Under these circumstances there can be no doubt that the result of bulk crushings is of much more value as a criterion than the assay of hand samples. The result of the treatment of the second bulk sample of 20 tons (now going through the battery) is, therefore, a matter of great interest, as bearing upon the question of the extent of payable ore near the outcrop.

The formation at Shorter's Hill appears to be about 60 yards wide, being bounded on the east by a narrow belt of slate, while on the west another gossan lode, in which gold was first discovered by the prospector, occurs at a distance of about 60 yards. The strike of the lodes is a few degrees to the west of north.

At Moppett's claim, authority 140, which is about half a mile north north-west of Shorter's, another small opening about 8 feet deep had been made, revealing the following section:—

A bulk sample of 21 tons taken from this opening was crushed at the Wentworth Battery, and is said to have yielded 19 oz. of bullion, together with 3 cwt. 3 qr. of concentrates, containing  $12\frac{1}{4}$  oz. of gold;

gold; the tailings from the first 16 tons yielded by assay at the rate of  $6\frac{1}{2}$  dwt. per ton, and that from the remaining 5 tons yielded at the rate of 18 dwt. per ton. I understand that the mullock was found to be much richer than the solid quartz.

A sample taken by me from the face of the (4 ft. 6 in.) mullock yielded by assay 1 oz. 8 dwt. of gold and 2 dwt. 17 gr. of silver per ton. A sample broken at random from the solid quartz reef yielded by assay a trace of gold and 8 dwt. 4 gr. of silver per ton.

It will be apparent from what has been said that the gold at Rosedale occurs both in quartz reefs and in a very decomposed material, which is intersected by quartz leaders, and it would appear that the latter material contains the greater part of the gold, so far as the present very limited surface workings afford evidence.

The lodes occur in an intrusive rock of the nature of quartz felsite, which exhibits evidence of having been subjected to crushing strains, whereby a schistose structure has been induced. The dyke of crushed quartz felsite appears to be about 150 yards wide, and is bounded on the west by serpentine, and on the east by a narrow belt of slate, while further to the east massive quartz felsite extends for some miles.

The quartz reefs and the auriferous decomposed rock or mullock occur near the junction of the dyke of crushed quartz felsite with the slate; but the amount of work hitherto done is not sufficient to enable one to form anything like a definite estimate of the quantity of auriferous ore that may be expected to occur, or the depth to which it will probably prove payable.

I am inclined to think that the gold in the decomposed material, or "mullock," has probably been derived from pyrites occurring in the quartz leaders which intersect it, and that below the zone of oxidation (which may be expected to reach to a depth of perhaps 150 feet) the soft "mullock" will give place to hard quartz-felsite, from the decomposition of which I venture to think it has been derived. The gold will then probably be found to be confined to the quartz leaders; and as these will doubtless contain pyrites, it is to be expected that the ore will not be as easily treated as it is at present.

In the meanwhile there appear to be deposits of considerable size at the surface which contain gold in payable quantities; but more work will be required to be done before the extent of this payable ore can be defined.

There were about thirty miners at work at the time of my inspection; but with the exception of the two excavations mentioned, the work hitherto carried out is of a very superficial character. The lode deposits have been traced for a distance of more than a mile, and if the results already obtained be borne out by future crushings, they should afford employment for a considerable number of men.

EDWARD F. PITTMAN,  
Government Geologist.

The Under Secretary for Mines and Agriculture.

#### APPENDIX 9.

##### Absence of Artesian Water in the Wyalong District.

I HAVE examined the sites selected by the Wyalong Artesian Committee, and have no hesitation in stating that in my opinion there is no probability whatever that artesian water would be obtained by boring in any part of the Wyalong District.

The first locality inspected was near Black Creek Station and Oakhurst, on a tributary of the Bland. Here the country consists of wide alluvial plains, which have been formed by the flood waters of the Bland Creek and its tributaries; but palæozoic slates and conglomerates outcrop at the surface in places, and it is evident that none of the conditions governing an artesian water supply are present.

I next proceeded to Wollongough, and thence to Monument Flats, where I saw some outliers of upper cretaceous rocks, capped by basalt. The fact is apparent, however, that these upper cretaceous rocks (desert sandstone) are not underlain by the lower cretaceous or triassic water-bearing formations, but rest upon an impervious foundation of palæozoic slates.

From Monument Flats I proceeded to Mulyan, near Yalgogrin, and here again I found that granite and palæozoic sediments outcrop at the surface, and that there is therefore no chance of obtaining artesian water by boring.

#### APPENDIX 10.

##### Prospecting Works to Test the Iron Ore Deposits of New South Wales.

IN reference to my previous interviews with the Hon. J. Cook, Minister for Mines, and his desire that as complete information as possible should be obtained in regard to the principal iron ore deposits of the Colony, with a view of encouraging the establishment of the iron-smelting industry in New South Wales, I have the honor to submit the following recommendations:—

It has already been satisfactorily proved that iron ore of good quality occurs in several localities, such as Wallerawang, Mittagong, &c., suitable for the establishment of smelting works—that is to say, where the iron ore can be obtained in proximity to supplies of coal and limestone, and where railways exist which would enable the pig or wrought iron produced to be conveyed to the principal centres of consumption.

The only point which has not been satisfactorily demonstrated is the amount of iron ore available in each instance, and until this has been done it cannot be expected that capitalists will be willing to expend the large sums necessary for the erection of smelting works, for in the present state of our knowledge it is not by any means certain that the supplies of ore are sufficiently extensive to recoup investors for their large outlay.

In 1891 the late Government Geologist, Mr. C. S. Wilkinson, made an estimate of the iron ore in sight in those deposits which are known to exist within a convenient distance of Wallerawang and Mittagong respectively, and that estimate was published in the Annual Report of the Department of Mines for 1891. Mr. Wilkinson's calculations were, however, based to a considerable extent upon surface observations, as very few excavations, that would enable the actual extent of the deposits to be ascertained, had been made.

Mr.

Mr. Geological-Surveyor Jaquet is at present engaged in a more detailed examination of the various iron ore deposits of the Colony; but the same difficulty is experienced by him, for in the absence of excavations that would allow him to measure the depth or thickness of the deposits, his estimates must necessarily be based upon surface observations only.

In view of the importance of having this question (of the amount of iron ore available) placed beyond doubt, I think it is most advisable that a sum of money be granted from the Prospecting Vote for the purpose of sinking shafts and putting down bores with a diamond drill on the deposits in the vicinity of Piper's Flat, Mittagong, and Goulburn. It is needless for me to say that the benefits which would accrue to this Colony from the successful establishment of the iron-smelting industry would be almost incalculable, and I think, therefore, that a portion of the Prospecting Vote could not be devoted to a better object than the testing of this important question.

There are two known deposits of some importance in the neighbourhood of Wallerawang, viz., near Garland's selection, about 5 miles from Piper's Flat, on the road to Sunny Corner. One of these consists of magnetite and the other of limonite, and they are situated within a mile of one another. I recommend that a shaft be sunk on each of these to a maximum depth of, say, 200 feet, and that a crosscut be put in to test the width of the lode at the bottom of the shaft in each case.

A considerable body of good limonite ore occurs close to the township of Mittagong (*vide* deposit marked 6 on Mr. Jaquet's geological map of Mittagong). It was from this deposit that 3,273 tons of very good iron was smelted, in the year 1876, by the Fitzroy Iron Smelting Company. The deposit is a superficial one, and is supposed to owe its origin to a chalybeate spring. Its thickness was estimated by the late Mr. Wilkinson at 25 feet; but this is purely a matter of surmise.

I am of opinion that this deposit could be most economically tested by boring with a diamond drill, and I therefore recommend that five bores be put down through it at sites to be selected by myself or Mr. Jaquet.

There are two other deposits (marked 4 and 5 on the same map), known as Waite's Farm deposit and Comer's Spring deposit, which should also be tested by a diamond drill. I recommend that one or two bores be put down through each of these.

There are also several deposits in the vicinity of Goulburn which are worth prospecting; the most important of these are on Cooper's estate and Gibson's estate, and I recommend that a shaft be put down on each of these to a (maximum) depth of 100 feet.

All of the deposits referred to are on private lands, and it will therefore be necessary, if my recommendations be approved, to obtain the consent of the landowners to the proposed excavations.

E. F. PITTMAN,

Government Geologist,

7 August, 1899.

The Under Secretary for Mines and Agriculture.

#### APPENDIX 11.

##### Report on Application for Dredging Leases on the Abercrombie River.

I HAVE inspected that part of the Abercrombie River applied for as special leases for dredging purposes by Messrs. Willis and Nicholls.

There is no doubt that in past years a considerable amount of gold has been won by alluvial miners from the gravels in the banks of the river; but it is only possible to carry on this work, as a rule, when the river is very low, as at other times there is too much water in the gravels to allow the ordinary alluvial miner to work successfully. During the recent drought I believe the Abercrombie River was lower than it has been for many years, and consequently there were more fossickers at work in the gravels than are usually seen there.

One of the features of this river is the occurrence of deep water-holes, half a mile or more in length, and these are never dry, even in the most protracted droughts.

It is to be expected that considerable deposits of gold occur in these holes; but they could not possibly be recovered by ordinary alluvial mining operations, on account of the difficulty of dealing with the water. There is, however, every reason to believe that they could be successfully recovered by means of the bucket dredge.

The gravels on the banks can also, for the most part, be much more successfully treated by the dredge than by the ordinary process of the alluvial miner; and although there is no doubt that a few fossickers obtain a living by working these gravels during very dry periods, it would be unreasonable to prevent the extraction of the gold by dredges during those periods when it cannot be extracted by fossickers.

It appears to me that there can be no objection to granting the dredging leases on condition that the operations of the dredges are not to interfere with the gravels that are being worked by any alluvial miner. While such a condition will protect the interests of the fossicker, I am of opinion that it will not restrict the operations of the dredge to any appreciable extent, because there are but few fossickers, and their work is very intermittent.

E. F. PITTMAN,

Government Geologist.

The Under Secretary for Mines and Agriculture.

#### APPENDIX 12.

##### Result of Boring Operations at Gundagai.

A SECTION, prepared by Mr. Whittell, showing the information obtained by the bores put down in the alluvial flats bordering the Murrumbidgee, at Gundagai, is now submitted, and I have the honor to report that, in my opinion, there is no probability that any good purpose would be served by further continuing the boring operations.

The results obtained must be regarded as disappointing, inasmuch as no clearly defined auriferous lead, such as would warrant the sinking of expensive shafts, has been located. Two fine colours of gold have been found in three different bores; and the varying depths and positions at which they were obtained indicate

indicate that the deposits are probably more suitable for the operations of dredges than for those of ordinary alluvial mining. The rather irregularly arranged strata of clays, sands, and gravels, met with in the bores, point to deposition by a river which has frequently shifted its course, and the gold contained in these strata does not appear to be sufficiently concentrated to pay for deep underground excavations. On the other hand, although only six colours of gold have been obtained in these experiments, this result cannot be regarded as anything like a definite index of the value of the auriferous deposits, as the hand-drill forms a very imperfect means of determining the actual amount of gold present.

Government Geologist.

#### APPENDIX 13.

##### Progress Report by Mr. J. E. Carne, Geological Surveyor.

Sir, Geological Survey, Department of Mines and Agriculture, January, 1900.

I have the honor to hand you the following brief epitome of the work performed by me during the past year.

From the 1st to 19th January I was on leave of absence. From the 20th January to the 11th February was devoted to continuation of the preparation of my work on the copper industry.

From the 13th to 20th February I was engaged inspecting the Larry's Hill (Wiseman's Creek), Vychan, Eurow, Nangar, and Reedy Creek Copper-mines, in the Eugowra and Bumbury Districts.

From the 21st to 26th was occupied in preparing reports on Larry's Hill and other sites.

From the 27th to 2nd March I was occupied in visiting and reporting on a supposed deep lead at Log Paddock, near Mudgee.

From the 5th to 12th was devoted to examination of the Snowball (Gundagai), Frogmore, Captain's Flat, and Mulloon Copper-mines.

13th to 18th March.—Engaged preparing reports on Snowball, &c.; 20th to 22nd, continuing copper paper; 22nd to 24th, occupied in a second visit to Log Paddock, near Mudgee.

From the 24th to the 6th May, was occupied in completion of copper paper. The total official time devoted to travelling, examining copper-mines and deposits, and writing up the subject, amounted to four months two weeks and a day.

From 8th May to 3rd June, I was engaged inspecting the Tucklan Gold-field Reserve, near Tallawang, and land for settlement on the Cooyal, Pyramul, Parkes, Cugong, Carlisle, McPhail, Tomingley, Pinnacles, Ironbark Reefs, Grenfell, and Upper Bumbaldry Gold-field Reserves.

From 5th to 24th June, was occupied in office preparing reports on the above, &c.

From 25th to 29th June, inspecting special lease land in the parish of Calvert, county Bathurst, and attending Land Board at Carcoar, to give evidence of the auriferous character of same.

From 30th June to 5th July, engaged in office.

6th to 23rd July.—Engaged inspecting reserved land near Bodangora, copper lands near Wellington, reserved land at Peak Hill, Parkes, Tichborne, Young, and Grenfell. Examining late Church and School lands at Burnt Yards and Junction Reefs, and in the parish of Ponsonby, county Bathurst, with a view of reporting on the necessity for the proclamation of mining reserves; also, reserve land at Stony Creek, near Rockley.

From 24th to 31st July, engaged preparing reports on the above.

From 1st to 24th August, was occupied examining copper deposits at Drake; tripolite at Wyrallah, Richmond River; heath lands, between Woodburn and Evans River Heads, in connection with deep test for gold leads. Examining and sampling Yulgilbar Cinnabar Mines.

25th August to 9th September.—Examining slate quarry at Grattai, near Mudgee, Garland's Dredge, and reserved land at Stuart Town; and examining the Cudgong River, from junction of Meroo Creek to junction of Cudgong and Macquarie Rivers, in connection with applications for dredging leases; also, reserves at Lewis Ponds Creek, Macquarie River, Parkes, and Pulletop, near Germanton.

10th September to 14th October.—Engaged preparing reports on Cinnabar, &c.

16th October to 17th November.—On leave of absence.

18th to 21st November.—Engaged in office.

21st November to 3rd December.—Occupied in examination of reserves at Arramagong, near Grenfell, and copper and silver deposits at Tuglow and Mt. Werong, and reserved land at Mt. David.

4th to 6th December.—In office.

6th to 20th December.—Engaged examining supposed evidences of deep lead at Urana. Copper discoveries at Albert Water-holes and Orange Plains, proposed reservation at Old Caloola diggings, and proposed settlement leases near Parkes.

22nd and 23rd, and 27th to 30th December.—Engaged in office dealing with the above.

During the year I completed, as before stated, my paper on the Copper-mining Industry, which was printed and issued as No. 6 of the "Mineral Resources Series," 2,000 copies being struck off. I have also just about completed, in my private time, a pamphlet on the occurrence of mercury in New South Wales, to form No. 7 of the same series.

The following reports made during the year are appended:—

1. Report on a deep lead at Log Paddock, near Mudgee.
2. Report on Larry's Hill Copper-mine, Wiseman's Creek.
3. Report (second) on Yulgilbar Cinnabar Mines, Upper Clarence.
4. Report on portion of the Cudgong River channel for dredging purposes.
5. Report on a proposed reservation for mining purposes in the parish of Belubula, county of Bathurst.
6. Report on a proposed deep test of the auriferous heath lands of the North Coast.
7. Report on proposed boring for deep auriferous leads at Urana.
8. Report on the Tuglow Copper and Mt. Werong Silver-mines.
9. Report on the Albert Water-holes and Orange Plains Copper-mines.

*Notes on other Localities.*

*Snowball Copper-mine*, near Gundagai, portion 168, parish Willie Ploma, county Wynyard.

The following notes are extracted from a special report furnished in connection with the proposed resumption of the above portion for mining purpose:—

The object of the visit was inspection of any new developments or discoveries since my previous examination several months before, particularly a "gossan" lode reported to exist near the old workings. The latter was then being superficially tested by the owner of the land by means of a shallow trench. No copper ores were visible, and a sample selected for assay, No. 833, yielded only the merest trace of copper (0.04 per cent.). Neither gold nor silver were found in the sample. If this siliceous gossan caps a copper lode it has yet to be proved.

The whole question, therefore, turns upon the prospective values of the lower levels of the proved Snowball copper-lode, which between 1877 and 1880 was extensively worked, five furnaces being employed reducing the output. The amount of the latter or of the copper produced I have been unable to learn; but, judging from the slag-dump, which roughly measures 4,000 or 5,000 tons, the extraction must have been considerable.

At the present time inspection is not possible below 120 feet, owing to water in the lower levels; reference must therefore be made to the official records for such information as they afford.

The outcrop is a strong one, extending 300 or 400 feet, and, judging by the old stopes, the ore channel is of considerable width. The strike of the lode is nearly east and west, forming a contact deposit between sedimentary and igneous rocks. Slickensides are well developed on one wall, indicating movement and therefore persistence in depth.

The west end of the lode in the workings has been disturbed by a cross-course, but as the ore makes beyond it there is no evidence of the faulting described by Mr. Benson to account for his gossan outcrop. Certainly the exploration at this end is too limited to justify his assumption.

On the eastern extension of the strike, at some distance from the workings, a shaft has revealed the continuation of the copper ore, but not in solid form.

Several shafts have been sunk on the lode; the deepest is reported to be 220 feet (?); and between them for an approximate distance of 300 feet stoping has been carried on.

The value of the mine depends entirely upon its sulphide ores below the old workings, as the oxidised ores have practically been exhausted, unless fresh makes are discovered along the strike to the east and west.

The only indication of the character and value of the ore in the lower levels is gleaned from a portion of the sulphides from the 175-foot level raised by Benson in 1896, when the mine was partly unwatered. Twelve tons selected by breaking and hand-picking, together with 6 tons of carbonates from a higher level, sent to Lithgow, are reported to have yielded 7 per cent. of copper. It is highly probable that the carbonates were of higher grades than the sulphides, and that the average mentioned overstates the actual value of the latter.

Judging by the sulphide ore at surface, the lode now at the bottom of the workings is a low-grade proposition, and one requiring mechanical concentration before smelting operations. As the copper ore is leanly disseminated through the matrix, pyritic or any direct smelting process would be impossible, though bunches of smelting ore may undoubtedly occur at intervals.

The workings are in an unsafe condition, and a considerable expenditure would be necessary to determine the workableness or otherwise of the ore in lower levels. Certainly the most favourable opinion of the mine possible at the present time is that it offers fair inducement for further testing in view of the increased value of copper and the improved methods of treatment.

There is no doubt about the permanence of the lode in depth; the question is purely one of concentration, whether it will pay or not. It is a matter for regret that it should ever have been alienated, but there are no new developments by which to justify resumption.

The history of the mine briefly is that it was discovered by James Clayton in 1873, and taken up by him in conjunction with his brothers as a mineral lease. Later other leases were acquired, and it passed into the hands of a company. The earliest official record is that by the Chief Inspector of Mines—Mr. W. H. J. Slee—in the Annual Report of this Department for 1876, p. 125, to the effect that thirty men were employed and a furnace was being erected; lode opened for about 100 feet in length; assays of yellow sulphide reported to yield from 7 to 22 per cent. of copper.

In 1877 Mr. Slee reported the deepest shaft to be 130 feet, and the lode 10 feet wide, slaty, with solid bunches of ore. Two furnaces were in full work, and a third in course of erection. Population, about 150.

In 1878 and 1879 the Warden reported considerable activity at Snowball, and anticipated fair prospects when the railway reached Gundagai.

In 1880 work ceased, and in 1881 the mine is reported to have been purchased by Benson and Samper, but no work was done.

In 1882 the land on which it is situated was taken up as a mineral conditional purchase, which was cancelled in July, 1894, for non-payment of instalments due. In December, 1894, it was taken up as an ordinary additional conditional purchase by the present owner.

*Belmore Copper-mine*, near Cow Flat, in portion 57, parish of Ponsonby, county Bathurst, was examined during inspection of late Church and School lands in the parish mentioned.

The Belmore lode strikes N.E. and S.W. in hornblende and mica schist, in close proximity to limestone. In the New Belmore Shaft the strike is N. 40° E., with a north-westerly dip. Aid from the Prospecting Vote had been granted for sinking and driving in the latter. About 12 feet of sulphides, much mixed with country and quartz, were exposed in the workings. This class of ore requires concentration. A bulk test parcel was being prepared by spalling and picking, which was estimated to yield 10 per cent. of copper. Carriage to the Dapto Smelting Works costs about 18s. per ton, and the smelting charge 40s. per ton, with a 2 per cent. reduction on assayed contents. The cost of carriage would be almost entirely removed if the Cow Flat Mines, now being reopened, should resume smelting operations, as the distance from the latter is under 2 miles.

*The Sugar-loaf Mines* on Mountain Run Creek, about 3 miles further south in the same parish, were also examined.

Two lodes occur in this group of leases—the Sugar-loaf and Mountain Run lodes. The latter was discovered about ten years ago, and the former quite recently. The latter strikes N. and S., and dips west about 1 in 6, in hornblende and mica schist. Three shafts have been sunk, 50, 45, and 125 feet respectively, the lode averaging from 1 to 2 feet in thickness.

About 340 tons of carbonate ore had been despatched to Lithgow and Dapto Smelting Works up to the time of inspection, the average yield being 8 per cent. copper and 2 dwt. of gold per ton.

The sulphide ore from the deepest shaft is dreggy—mixed with schist—and a little blende is present. Twenty tons had been despatched, but returns were not to hand.

The Sugar-loaf lode is situated on the east side of the mountain of that name, and about 35 chains west from the Mountain Run lode.

A shaft has been sunk in very kindly-looking gossan to a depth of about 100 feet, then into limestone, and again into gossan with a little carbonate of copper at 134 feet.

About 7 chains westerly a massive lode of solid iron pyrites was cut in a shaft at 60 feet. At 100 feet the lode was driven on for 117 feet, where it had a thickness of 16 feet. Unfortunately it contains but a trace of copper. This lode strikes N. and S., and dips flatly west.

*Iron Duke Lode, Cadia.*—A report was made on this lode in connection with an inquiry as to whether gold is present in sufficient quantity to render it the chief and most profitable metallic product of the deposit.

The late Government Geologist examined the mine in 1881, and referred to it in the following terms in his progress report published in the Annual Report of the Department of Mines, 1881, p. 131 :—

“About half a mile from this (Cadia Copper-mine, J. E. C.) a large cupreous ironstone or gossan lode crosses the main creek (Cadiangulong, J. E. C.). It is over 70 feet wide, strikes W. 20° N. So far as it has been tested the lode is not sufficiently rich to work for copper; but it is probable that when sunk upon to the water level, or to a depth where the sulphides are undecomposed, good ore will be met with. About 20 chains from here, in a S.S.E. direction, a surface deposit has been sluiced for gold. The gold is supposed to have been derived from a small lode worked close by.”

Mr. Wilkinson after his visit frequently expressed his opinion that the Iron Duke outcrop represented an enormous deposit of iron oxide.

The cap or outcrop of the Iron Duke lode is cut across by Cadiangulong Creek, exposing a large face of gossan on the east side, in which traces of copper carbonates are visible. At this point a shaft has been sunk to a depth of over 280 feet. A little ore from the lower levels is still lying near the shaft; it consists of sulphides of iron and copper.

The tunnel—1,300 feet long, according to report—starts in the west bank of the creek, and for a considerable distance passes through a ferruginous or gossany material containing traces of copper carbonates in places. For a further considerable distance, after passing through the ferruginous lodestuff, the course of the tunnel is most erratic in solid andesite, destitute of any trace of lode or vein structure.

Two cross-cuts have been driven from the tunnel in the ironstone or gossany lodestuff, and two winzes sunk in the same formation. Air shafts connect the tunnel with the surface.

A considerable amount of stoping has taken place, following a vein of good copper ore, about 2,500 tons of which are reported to have been extracted under the direction of the late Captain Holman, of an average grade of 16 per cent. Altogether between 4,000 and 5,000 tons of copper ore are reported to have been extracted from the Iron Duke lode, but an attempt to verify the figures by the Scottish Australian Mining Company's books was defeated on the ground of the trouble caused in making the search.

Where the creek cuts the lode a rich vein of carbonate and oxide of copper, about 4 feet thick, is reported to have been discovered about ten or twelve years ago, 40 tons of ore being extracted. At this point a shaft was started by the owner, after application for a lease.

The tunnel in August last had recently been cleaned out, and was in excellent order; the greater part of its length, however, was entirely off the course of the lode.

The level of the tunnel is far too shallow for effective test of the lode, and the winzes are also too shallow to remedy this defect. The shaft on the opposite side of the creek has certainly pierced the sulphide zone, but there is no evidence to show whether drives from the lowest levels have penetrated into the hill to the west, forming the western extension of the lode, and inspection is now impossible owing to the water in the shaft.

The frequent barrenness of ironstone caps of copper lodes is well known, being due to the instability of copper salts in the presence of leaching solutions; this fact encourages the belief that more concentrated bodies of the ores of copper may be found below the zone of oxidation. Certainly the value of the lode as a copper-mine cannot be determined until the sulphide ores have been explored under the main outcrop.

The abundant iron oxide of the Iron Duke outcrop would be of excellent service in fluxing the sulphides from a depth if such exist in payable quantities; failing this, it will have a value in the future as a flux in public smelting works.

Touching the gold contents of the lode, the only direct evidence adduced in this case is to the effect that 9 tons of stone from the tunnel yielded 2½ dwt. of gold per ton by battery treatment.

Other evidence was given to the effect that prospects of loose gold had been obtained on the surface of the Iron Duke lode. The presence of free gold in the outcrop, and in the soil resulting from its weathering and decomposition, is to be expected when the existence of gold in small quantity is admitted in the copper ore extracted from the lode. The natural leaching solutions which remove copper salts from the outcrop and upper levels of a copper lode do not affect the gold contents which remain to unduly enrich the resulting gossan. Hence, in oxidised zones, gold may in such a case be the predominating metal in value, but the cap of a lode cannot be considered apart from its lower levels, especially—as in this case—the cap consists of natural fluxing material for the undecomposed or unoxidised ores below water level.

In many parts of the principal copper lodes of the world, down to depths varying from 60 to 300 feet from the surface, no payable copper ores were obtained in the oxidised or gossany cappings, the value of which in many instances depended entirely on other metals than copper.

A case in point is the early history of the famous Montana copper lode in the United States, from which, perhaps, the largest output from any single deposit in the world is now being obtained annually. Down to levels ranging from 40 to 300 feet, practically no copper ore was met, the lode being worked solely for the silver it contained. It had, in fact, become a low grade silver deposit when the rich secondary ores, resulting from the leaching and redeposition of copper ores originally in the impoverished oxidised capping, were struck between the levels mentioned.

The evidence adduced as to the alluvial gold worked on the opposite side of the creek has no bearing on the value of the Iron Duke lode in gold, as the site of the former is higher up the creek than the latter.

The Iron Duke lode, which is embraced by P.G. Ls. 2 and 3, must be regarded as essentially a copper lode carrying an undetermined proportion of gold, the amount of which cannot be arrived at without reopening and adequately testing the lodestuff both above and below water-level.

Whatever the actual proportion of gold in the average lodestuff, I fail to see how it can be extracted without interfering with the owner's property in the copper and iron.

In view of all the circumstances of the case, the apparent abandonment of mining operations by the owner, protracted litigation, and the absence of risk to the Department in granting the leases, it may, perhaps, be worth considering whether they should not issue, leaving the respective owners to settle conflicting property interests amongst themselves.

JOSEPH E. CARNE, F.G.S.,  
Geological Surveyor.

The Government Geologist.

#### APPENDIX 14.

##### Report on a Deep Lead at Log Paddock, near Mudgee.

Sir,

Geological Survey, Department of Mines and Agriculture, 3 March, 1899.

I have the honor to report having inspected the site of boring and sinking operations in search of a deep lead at Log Paddock, near Mudgee. Instructions to visit the locality were received by me on Monday, 27th ultimo, and a visit was paid to the locality on the 28th. Unfortunately, the shaft was found to have been flooded by an inrush of water on Saturday, the 25th instant, which prevented a thorough inspection being made. The attached plan and section will illustrate the facts elicited by boring and sinking. From bores A and D, I was enabled to examine some of the true bed-rock, the fragments of which correspond exactly with a bleached cleavable slate from a shaft about 70 feet E. 10° N., from A, which is undoubtedly true bottom. In bores B and C, after passing through the ordinary wash level of the locality, at 75 feet, black pug clay with coaly or peaty matter was pierced to a depth of 194 ft. 6 in. in the case of B, and 162 ft. 8 in. in the case of C. Waterworn quartz drifts were passed through at 110 and 166 feet, as shown in section. On the true bed-rock no wash occurs so far as the bores have tested.

The shaft started within 3 ft. 6 in. of C bore passed through the 75 feet drift, from which 2 gr. of fine gold were obtained, according to Mr. Higgins, from the core of the bore, and entered another drift at 110 feet, from which 7 gr. of gold were obtained from the auger core. Prospects were washed from the lower drift in the shaft, which at that point was not payable. At 118 feet water broke into the shaft, the ground previously having been troublesome owing to swelling of the clay. The water rose 87 feet. Baling by means of two kegs, of 18 gallons capacity each, with two horses, was resorted to; after lowering it 20 feet little change in level could be effected with the means at hand. The boring-rods were then lowered into the shaft, and the boring continued through the bottom to the 129 feet level in dark pug with quartz grit; but no more drift. It would appear from this that the water comes from the drift struck at 110 feet, and not from below.

Operations were then suspended to allow of a third whip being rigged. It is doubtful whether the water can be reduced and kept permanently under by these means, though possibly they may be sufficient to allow of a proper test being made of the lower drift at 110 feet, which I believe is the present intention.

A few colours of gold are reported from the drift passed through in bore B, at 166 feet.

The work already done has clearly proved that the shallow lead at 75 feet was worked on a false bottom, and that at least two drifts occur at lower levels, whether payable or not remains to be proved.

The conditions governing the aid granted provide for the second bottom being reached before payment can be made. The true bottom lies some 44 feet below the bottom of the shaft. Judging by the bore C alongside, no other drift will be passed through in this distance; but by continuing the shaft into bed-rock about 10 feet a rising level could be driven to the lower wash in bore B at 166 feet, and the water therefrom could be drained back into the shaft sump, and so raised to the surface by pump if the wash prove workable.

As the work, owing to the influx of water, has reached a critical stage at which a little financial assistance would be of great help, I beg to recommend the case for favourable consideration. It is the intention, I believe, to test the second wash; but the test should not cease until the lowest has also been tested.

To enable a satisfactory trial being made, a good working shaft was started nearly 11 feet by 3 feet in the clear, divided into three compartments, which is absolutely necessary for safety, apart from convenience, as the ground is liable to great "swelling" movement—it is possible that the lowest sets have already been displaced; the centering or divisions tend, however, to withstand the strain.

*Re cost:*—Higgins states that he is the contractor to the syndicate; that three tenders were received from 40s. per foot upwards to sink and timber 130 feet, the company finding the timber; that his tender at 48s. per foot was accepted. The cost for sinking seems very extravagant. I give the figures for what they

 Sydney, N.S.W.

The bulk of this class of ore has been removed from the proved area ; in any case the quantity available is very limited compared with the permanent sulphide supply below, the composition of which must determine the possibility of treatment and the best method of achieving the most profitable returns. The composition of the sulphides is well illustrated in the following partial analyses of three samples selected by myself to represent the highest and lowest grades and an average of the two, the grades being determined by the amount of copper and zinc sulphides present.

Approximate Analyses.

	No. 495. Highest Grade.	No. 494. Lowest Grade.	No. 493. Average.	Average of Nos. 495 and 494.	Average contents of Captain's Flat Sulphides.
	per cent.	per cent.	per cent.	per cent.	per cent.
Copper .....	8.45	5.80	6.54	7.12	1.11
Zinc .....	14.96	30.73	16.49	22.54	14.50
Lead .....	3.86	7.37	4.76	5.61	8.04
Iron .....	22.92	12.06	17.79	17.49	17.75
Silica .....	16.57	10.95	21.12	13.76	23.70 (nearly)
Silver.....	trace.	5 oz. 19 dwt. 18 gr.	10 oz. 5 dwt. 19 gr.	.....	(For comparison.)
Gold .....	trace.	trace.	trace.	.. .....	.....

These analyses reveal a most refractory smelting mixture, chiefly owing to the large proportion of zinc, the amount of which, judging from the character of the considerable quantity of ore at grass, is in excess of the figures shown in the average sample (No. 493) selected by chipping across the ore blocks. It will, therefore, be safer to accept the average of the highest and lowest grades (Nos. 495 and 494), as the estimating basis, thus fixing the metallic zinc contents at 22.84 per cent. of the lodestuff. The equivalent of this amount in zinc sulphide (blende), in which form it occurs in the lode, is 34.08 per cent. ; and the equivalent of the metallic lead in lead sulphide, 6.46, raises the total percentage of these objectionable associates of the copper ore to 40.54 per cent.

For comparison the relative proportions of the principal metals and silica are given of an average sample of the Captain's Flat sulphides, which most nearly approximate to those of Larry's Hill. It will be seen that whilst the latter is much richer in copper it is also unfortunately much richer in zinc. The lower proportion, 14.50 per cent., of zinc in the Captain's Flat ore has taxed to the uttermost all the skill and resources of the experts and magnificent plant of the Lake George Mines (Limited) to overcome, and any addition to that amount would render smelting impossible with such low grade refractory material. In fact the high pitch of economic efficiency achieved at Lake George Mines is only rendered possible by the immense size of the lode—35 to 40 feet in width—and the abundant gossan, solid clean pyrites, and slag available for fluxing purposes, which unfortunately are not at present at the command of the Larry's Hill Proprietary.

The Larry's Hill Lode, has, therefore, to be considered as an independent proposition, relying practically on one class of ore, its restricted size necessitating utilization of the whole of the lodestuff if local smelting were to be adopted, as the proportion of first grade ore, about 7 per cent. copper, is not sufficient to keep a furnace running during mining operations ; and the extraction of the higher grade would but complicate the smelting difficulties of the larger proportion of seconds.

It is true that the available gossans could be utilized for smelting selected ore, and thereby slag would be produced suitable for further fluxing ; but as the quantity of gossan ore is limited it is better to regard the matter from the sulphide standpoint.

In either a reverberatory or a blast furnace it would not be practicable to smelt the Larry's Hill ore, without the addition of a large proportion of suitable fluxes, such as iron and lime, so as to reduce the percentage of zinc, in the charge by at least one-half.

It is unfortunate that the adjacent North and South Wiseman's Creek Copper-mines offer no means of relief inasmuch as the sulphides of those mines are also highly charged with zinc, while the supply of oxidised ores is scanty.

It is reported that about 9 miles distant a large lode of cupriferous iron sulphide occurs, which it is proposed to treat by pyritic smelting. If such be the case it would be to the interest of both proprietaries to amalgamate the treatment of their ores. The Black Bullock Mine would afford a valuable flux for the Larry's Hill ore, and the latter would supply copper for the collection of the gold and silver contents, and the formation of the more valuable and preferable copper matte.

Limestone occurs within a short distance of the Larry's Hill Lode ; without, however, knowing its composition and that of the Black Bullock pyrites, it would be impossible to indicate the desirable proportions of the constituents of the charge in pyritic or ordinary blast smelting. In addition to the minerals mentioned sufficient silica would be required to slag the excess of iron over and above the matte requirements. The proportion of silica in the Larry's Hill sulphides is low, the amount required would, therefore depend upon the percentage in the added pyrites and limestone.

In reverberatory smelting, oxidised or roasted ores, would be required in addition to limestone, unless ironstone was available.

As before stated, above the 50 feet level, oxidised ores are available to a limited extent, and these would be suitable for charging with the sulphides ; but, as at least equal quantities of the two classes would be required in the charge the supply would, I believe, be soon exhausted, as the surface indications certainly do not promise extended longitudinal persistence.

The only alternative to local smelting is disposal of the ore to the nearest Smelting Works, viz., Lithgow. But even the carefully dressed ore averaging about 7 per cent. of copper offers no inducement to work on this condition, as the costs of mining and carriage, and smelting charges would absorb the proceeds, even if no deduction was made for excessive zinc. Custom Smelting Works usually allow 10 per cent. of zinc in an ore, but for any excess a deduction of 1s. per unit is made in purchasing.

It

It may interest the applicant to learn that the deleterious effect of zinc and lead sulphides in copper smelting is their tendency to choke the furnaces by forming crusts in the throats. Zinc sulphide also hinders the metallurgical process by entering both the slag and the matte, rendering the former viscid, and the latter light, and thus injuring the separation. Lead also affects the malleability and tenacity of copper, preventing rolling and wire drawing, but zinc under 18 per cent. is not so objectionable.

As regards the last question to be considered—the most suitable site for Smelting Works—if such were feasible under the circumstances, close to the dam on the north end of the Mine Ridge, affords a suitable site for erection of a Smelting Plant, which could be reached on a falling grade from the mine, and yet sufficiently elevated to command ample fall for slag dumping.

The site selected for water conservation affords ample storage and excellent catchment.

I have, &c.,

JOSEPH E. CARNE,  
Geological Surveyor.

The Government Geologist.

#### APPENDIX 16.

##### Second Report on Cinnabar, near Lionsville.

Sir,

Geological Survey, Department of Mines and Agriculture, 13 October, 1899.

I have the honor to report having made a second visit of inspection to the Yulgilbar Cinnabar Deposits, near Lionsville, for the purpose of noting developments to date. Whilst engaged upon this work the "Great Australian Quicksilver-mining Company (Limited)," was formed to secure and develop the property.

After the first inspection in 1895 (Annual Report, Department of Mines and Agriculture, 1895, pp. 141-4), aid was granted to the prospectors—Bassetti and Party—to deepen the main shaft, and sink another at a spot indicated. The former was continued from 50 to 95 ft. 6 in., and then temporarily abandoned. The site of the second aided shaft, in mineral lease 2, was forfeited by the original holders, and shortly afterwards secured by Messrs. Miller, Pollard, and Party, who sank 58 ft. 6 in. Again abandoned, it is now included in the above company's property.

At a later date, through the agency of Dr. Flateau and others, two additional shafts were sunk about 26 and 30 feet, and an open excavation made in a more recent discovery.

Several distinct lines of cinnabar-bearing veins, proved by the later developments, have been charted on the accompanying plan, and illustrated in sections. Distinctive letters on the plan and in the manuscript denote the position and identity of the workings.

The extension of prospecting has demonstrated two facts, viz. (1), a larger amount of cinnabar-bearing rock than formerly, and (2) the probable dependence of future operations upon the value or workableness of the lower grade deposits, which alone offer sufficient promise of quantity commensurate with successful working; for it goes without saying that a minimum yield can only be offset by large, cheap, and rapid output.

Unfortunately the grade of the ore in the latest developments is disappointingly low, bordering so close, if not quite, on the unworkable as to put the contemplated erection of furnaces altogether out of the question at this stage. The first and most pressing necessity is extensive proving on systematic lines, for which there is both justification and inducement. The hopes engendered by recent experimental tests of a small quantity of picked ore are discounted by the limited supply of such grade in view. It is therefore imperative that the prospective supply and value of the larger deposits should be definitely determined by extended prospecting before a reducing-plant is considered.

The brilliant hue of cinnabar—vermilion—renders it an extensive colouring agent, hence an infinitesimal proportion imparts a very deceptive appearance to a veinstone or impregnated rock. Some of the highest coloured and most promising-looking portions of the Yulgilbar ore are so lightly charged with this mineral as not to sensibly affect the specific gravity of the matrix. When it is remembered that cinnabar is a very heavy mineral possessing a specific gravity of nearly 9, as compared with 2·6 to 2·7 of the matrix, the disappointing assay results of such samples can be readily comprehended.

Active prospecting had ceased for some little time at the mines, but the Proprietary placed the workings in order, and afforded every assistance during the week devoted to inspection. It will be seen by the plan that at least four distinct veins have been located, and more or less superficially tested, the most important, probably, being the junction line with the diorite dyke which intrudes the hornblende granite country. Here the largest defined ore body is exposed, which, from its mode of occurrence, is likely to prove permanent. An interesting feature is the impregnation of both contact rocks with cinnabar extending to at least the full width of the shaft G.

From the field and microscopic evidence it would appear that solfataric mineral solutions containing sulphides of mercury and antimony followed the diorite intrusion along contraction fissures, permeating both dyke and country laterally for a distance yet unproved.

The diorite dyke is traceable on the surface from shaft G, through mineral lease 1 and beyond, and has also been exposed in shaft E and open cut R, as well as in a number of small openings between G and E. Notwithstanding the apparent discrepancy in strike, it is highly probable that the veinstone at O and P, near the Clarence River, agrees, in more than resemblance, with the dyke line.

*Geological Features.*—An alteration in the nomenclature of the previously-recorded geological formations has been rendered necessary by extended field research and petrological examination of rocks from lower levels. The deceptive-looking formation, previously described as "felsite" and "altered felsite," proves to be lode material, a product of the transforming effects of the investing mineral solutions.

*Further Development.*—The main shaft (D on plan) has been deepened from 50 feet recorded in the first report, to 95 ft. 6 in., and a level has been extended 11 feet easterly at 36 feet from the surface. Close timbering obscures inspection above the level; below it the shaft is inclined about 25 degrees from the vertical following the underlay of the vein southerly, strengthened by sets at intervals.

The face of the level shows a slight impregnation of cinnabar on the footwall. Evidence of fissuring is afforded by a vugh of considerable size lined with chalcedonic silica.

Below

Below the close timbering to the bottom of the shaft, a distance of about 59 ft. 6 in., the actual veinstone averages from 4 to 7 inches in thickness, and is well defined at the lowest level. Slight impregnation of the country occurs in places, but the quantity of cinnabar is inappreciable.

In the vein the cinnabar occurs as occasional streaks from half an inch to 1 inch thick; sometimes two parallel streaks occur about an inch apart. The productive portions of the vein range from 1 to 3 inches in width, but are not continuous; in fact, all trace of cinnabar occasionally disappears for some distance. An idea of the irregular occurrence of the mineral in the matrix, both vertically and horizontally, is gained from its appearance in the shaft and drive. The ratio of cinnabar-bearing to blank matrix equals about 1 in 4 vertically.

A considerable amount of the full width of the vein, exposed in the east of the shaft at 93 feet, was gadded out and brought to surface. Here the best coloured portion was picked out, broken small, and carefully sampled in the usual way by mixing and parting. In the departmental laboratory large assays in duplicate of this material yielded (No. 3,373) at the rate of 1.09 per cent. of mercury. An average sample of the discarded veinstone (No. 3,372) yielded no mercury.

The specific gravity of large pieces of these samples ranged from 2.69 to 2.71.

From the nature of the veinstone and the capricious occurrence of the cinnabar, it is apparent that a large amount of vein material—apart from the country extracted for the proper dimensions of the shaft or level—would have to be mined in proportion to the workable ore obtained by spalling and picking. Calculated on a specific gravity of 2.7 a cubic foot of veinstone would weigh about 168 lb., or 13 cubic feet to the ton. Accepting on the evidence of the shaft the proportion of workable ore as 1 to 4, 52 cubic feet of veinstone would have to be mined to yield 1 ton of 1 per cent. ore.

As richer streaks of ore were found nearer the surface allowance must be made for more favourable developments than at present visible. Possibly an additional per cent. could be safely allowed, bringing the average grade of the picked stone, obtainable in systematic working, up to 2 per cent.

The ore recently experimented on in Sydney before the directors and others of the newly formed company was picked from the material raised during the sinking of the 95 feet, and a neighbouring shaft on the same line, principally, I believe, from the former.

Though this vein is not in itself workable on account of the thinness and discontinuity of the ore streaks, it must be taken into account in estimating the possibilities of the whole property.

From the bottom of the main shaft D strike levels are required to open the vein, and a crosscut to the dyke lode to intersect any intervening parallel veins that may exist. The dyke lode would be cut on this level at about 110 feet below its outcrop.

About 120 feet from the main shaft D on the western strike a more recent shaft, C, was sunk to about 30 feet; time did not permit of it being unwatered; judging by the tip, however, the vein in the granite is very narrow.

About 8 chains still further west, apparently on the same line, a small opening reveals the usual chalcedonic veinstone containing stibnite, pyrites, and a little cinnabar.

About 12½ chains E. 18° 20' north from the main shaft D is another recent shaft (F on plan) locally known as "Doctor's Shaft," which has been sunk to 26 feet on the most northern vein represented by shallow openings at the time of first inspection.

The strike of the vein in the shaft is N. 55° E. with a slight south-easterly dip.

The shaft is closely timbered to within a few feet of the bottom; removal of timber at 14 feet revealed the same thickness of veinstone as at 26 feet, viz.:—12 to 14 inches, but more compact. At the lower level the vein is split in two by about 6 inches of country. On either side of the veinstone the latter is slightly impregnated with cinnabar. Though the barren material and the immediate walls are referred to as "country," the whole is so impregnated with secondary calcite and silica from percolating solutions as to be more correctly described as barren lodestuff.

From the strongest part of the vein in the shaft, from surface to 10 feet, some highly coloured veinstone has been extracted in sinking, the hues ranging from bright pink to purple. As conflicting views were entertained of the value of the grade represented by these colours on view in Sydney prior to the recent inspection, tests were made in the departmental laboratory under Mr. J. C. H. Mingaye, F.C.S., Analyst and Assayer, of typical specimens of a highly coloured and non-coloured veinstone with the following results:—

No. 2,285—Coloured, yield 0.92 per cent. of mercury.

No. 2,286—Uncoloured, yield 0.10 per cent. of mercury.

A further sample of the coloured veinstone obtained by chipping the blocks at the surface yielded:—No. 3,365, 0.825 per cent. of mercury.

From the ends and bottom of shaft at 26 feet, 200 lbs. (weighed) of ore was obtained by gadding out the full width of the exposed veins. This was broken small and carefully sampled in the usual way. An assay of the test portion yielded (No. 3,363) less than 0.01 per cent. of mercury.

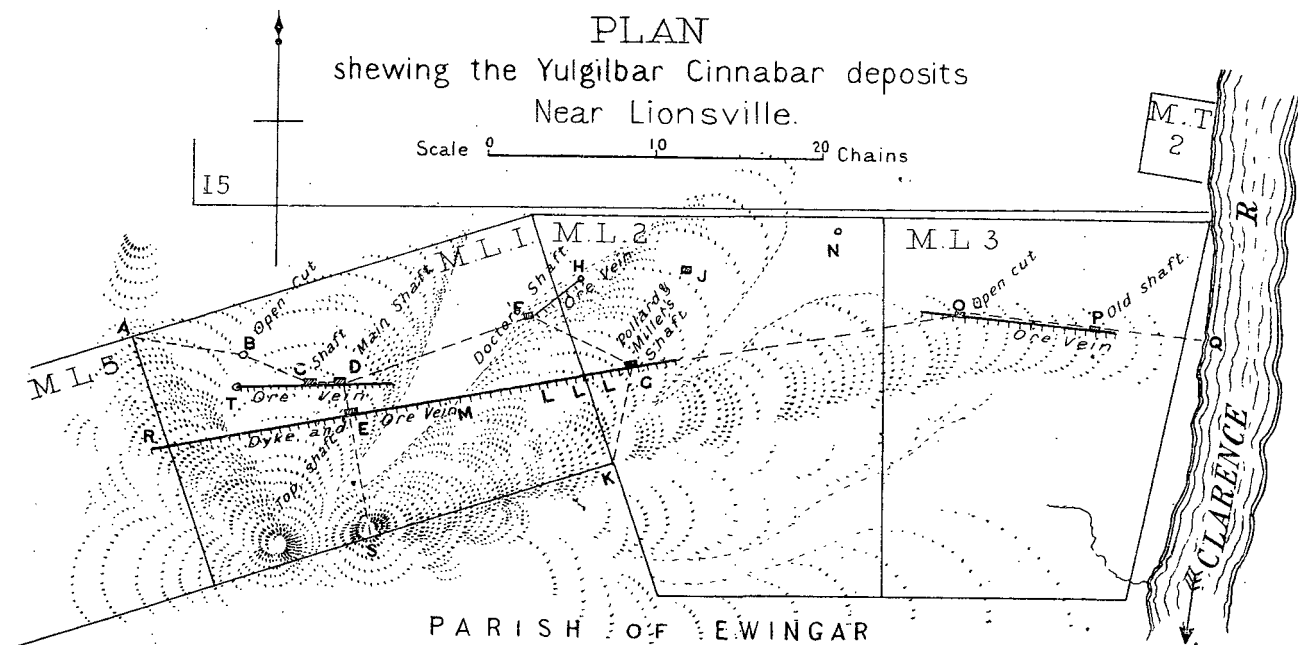

After selection of the average sample, 24 lb. of the remainder was weighed and reduced to one quarter by rejecting everything destitute of cinnabar stains. An average of the reduced sample (No. 3,364) still gave a return of less than 0.01 per cent.

The specific gravity of the "purple" ore determined from a large piece equalled 2.85; that of the "pink" 2.77.

A picked sample from the principal cinnabar make in the vein at 26 feet—about 3 inches thick—yielded:—No. 3,368, mercury at the rate of 1.065 per cent.

The shaft at the present level is in poor average veinstone, though a very small proportion might be picked to about 1 per cent.

It is apparent from the superficial test made that certain parts of the veinstone contain about 1 per cent. of mercury, but the proportion of the latter to the bulk of the veinstone cannot be estimated without further development. The thickness of the veinstone will afford a larger productive extraction than in the case of the main shaft, disregarding, of course, the valueless blank at the 26 feet. The shallowness of the shaft prevents any estimate as to the relative proportions of productive and barren veinstone. The grade of the former so far as exposed approximates to 1 per cent.

W. A. Gullick, Government Printer,  
Sydney, N.S.W.

The second deepest shaft (G on plan, locally known as Miller and Pollard's) was sunk at the site indicated by the writer (C in first report) on the junction line of granite and diorite. The felsite previously mentioned has since been more definitely determined as an alteration product of the investing mineral solutions.

At the surface evidence of a certain amount of sub-soil leaching and redistribution was visible in the decomposed outcrop, which was horizontally banded in white and pink, representing alternate solution and impregnation at the various stages of weathering and decomposition. Similar conditions occur at B on plan.

As previously recorded, samples from the banded outcrop yielded :—

No. 4,057—Mercury 0·48 per cent.

No. 4,058—Mercury 0·5 per cent.

whilst a sample of less decomposed lode rock yielded :—

No. 4,056—Mercury 1·58 per cent.

The present shaft G was sunk 58 ft. 6 in. a few feet south of the previous opening, cutting the lode material at some depth from the surface.

At 46 feet, to which depth the water was lowered, the full width of the shaft is occupied by cinnabar-bearing lodestuff. The diorite in the centre of the exposed face is about 2 feet thick, and contains finely disseminated cinnabar throughout. On either side decomposed or highly altered lodestuff passes gradually into hornblende granite, cinnabar impregnating it so far as the limits of the shaft permit inspection.

A sample taken from the full width exposed at 46 feet yielded—No. 3,375, mercury, 0·15 per cent.

Evidently the grade in this shaft is unequal, as subsequent assays show. Judging by the material in the shaft tip, which is indiscriminately mixed, sorting will be possible and satisfactory. A large sample of a fine-grained greenish rock (diorite), crumbling on exposure, yielded—No. 3,369, mercury, 0·67 per cent.

A similar test of a fine-grained pinkish rock (weathering brown) from the junction of the granite yielded—No. 3,370, mercury, 0·805 per cent. Coarse-grained granite from the junction yielded—No. 3,371, mercury, 0·570 per cent.

Along the junction of the granite and diorite, chalcedonic quartz occurs with nests of stellate crystals of sulphide of antimony (stibnite) on its surfaces.

Between shafts G and E on this line several shallow openings reveal a common class of material, though in places more chalcedonic. At M, a sample of fine-grained decomposed rock, exposed at surface, yielded—No. 3,374, mercury, 0·06 per cent.

Shaft E—the 20 feet shaft of the first report—has fallen in, hence no fresh developments are to be recorded here. Still further west at R (on plan), the dyke has been exposed in an excavation, traces of cinnabar only are visible at this point.

B represents an entirely new discovery, where an open cut exposes a width of about 17 feet of rotten hornblende granite lightly impregnated with cinnabar. The conditions of occurrence at this point indicate a certain amount of progressive leaching and redeposition of the cinnabar in the horizontal, curving, and vertical seams determined by the shell-like weathering of the rock and the angles of the joint planes.

The principal deposition of the cinnabar is in these lines of soakage, though not confined to them, as the mineral occurs in the rotten granite in the form of fine circular or semi-circular plates or stains exhibiting strong indications of secondary origin. It appears certain, however, that, as in G shaft, the granite will be found in depth to be impregnated with cinnabar from the original thermal deposition.

A test shaft and crosscut are needed at this site to determine the width and strike of this ore body, which at present are not definable. A hard quartzose vein, partly chalcedonic, is exposed in the cutting, which probably represents the original channel from which the mineral solutions impregnated the granite. Until the unweathered rock is reached it would be hazardous to estimate the value of this deposit. The extent of the surface impregnation may be judged from the following assay of a properly averaged sample of about 1½ tons of the material freshly extracted from the full width of the open cut :—No. 3,366, mercury, 0·035 per cent. An average sample of the higher coloured seams and joint fillings in the face of the open cut yielded—No. 3,367, mercury, 0·115 per cent.

*Summary.*—It will be seen by the foregoing statement that whilst the quantity of cinnabar-bearing material in sight has been increased by further prospecting the grade has not correspondingly improved. The line G to F will probably yield a workable quantity of ore containing from ½ to 1 per cent. of mercury. From the main shaft D and Doctor's shaft F lesser quantities of similar grade will be obtainable, with the addition of richer bunches of ore.

From B no ore approaching the above grade is yet obtainable, whatever its prospects in depth it cannot at the present time be considered.

The question confronting the newly formed company now is—providing that ore of ½ to 1 per cent. grade can be obtained in quantity, can it be profitably worked under local conditions? Certainly even lower grades are successfully operated in Europe and Russia, but circumstances alter cases, and it is more than doubtful if the Yulgilbar deposits could be attacked on a commercial scale as they now appear.

Considering, however, the totally inadequate prospecting performed, there is every reasonable inducement, as there is every need, for a thorough test to effectually decide their workableness or otherwise.

I have, &c.,

JOSEPH E. CARNE,  
Geological Surveyor.

## APPENDIX 17.

## Report on portion of the Cudgegong River Channel for Dredging Purposes.

Geological Survey, Department of Mines and Agriculture, Sydney,

27 September, 1899.

Sir,

I have the honor to report having carefully examined the Cudgegong River channel between the extreme datum posts mentioned in these papers—99-15,466, 99-18,431—a distance of about 13 miles, following the river. The highest up stream peg is placed about  $\frac{1}{2}$  mile above the junction of Meroo Creek, and the lowest down stream about  $1\frac{1}{2}$  mile above the junction of the Cudgegong with the Macquarie.

The object of the examination was to ascertain whether the issue of special leases for dredging would conflict with, or prove inimical to, the interests of miners working with ordinary mining appliances.

I am of opinion, as a result of examination, that special leases covering the river channel between the points mentioned, would clash with the operations of ordinary miners only during favourable seasons and levels, over certain very restricted areas. If a covenant be inserted in the leases—as is contemplated—protecting the ordinary miner's interest in the shallow bars and beaches accessible to his appliances, every valid reason against their issue would be removed.

The importance of the proposed dredging operations completely overshadows that of the present desultory and intermittent fossicking, as nine-tenths of the channel length is unsuitable for ordinary mining.

But one miner was actually engaged in the channel covered by the lease applications at the time of inspection, doubtless owing to the freshet in the river, as the local miners contend that during low summer level they are able to attack the river bars and beaches to advantage.

The principal workings along the Cudgegong River at the present, as in the past, lie along the margins of the earlier and higher channel, now marked by the patches of stranded auriferous drift left behind by erosion of the present narrower and deeper channel. The older drifts are situated some distance from the present river bed, entirely out of reach of dredging. The issue of special leases embracing the channel, therefore, would not interfere with the principal sphere of the ordinary miner's operations.

The river channel averages from  $2\frac{1}{2}$  to 4 chains wide; special leases should be measured to the full width. A lease of 100 acres applied for, 1 chain wide along the river, is intended as a monopoly of an undue area, as it would be impossible to work parallel leases of similar dimensions without conflict.

In the proposed legislation governing dredging, I would respectfully urge clear definition of a maximum area. Whilst strongly agreeing with the principle of liberal concessions and encouragement to pioneers of costly new methods, the time appears to have arrived when a firm stand must be made against excessive areas, the patent object of which is subdivision and flotation.

I have, &amp;c.,

JOSEPH F. CARNE,

Geological Surveyor.

The Government Geologist.

## APPENDIX 18.

## On proposed reservation for mining purposes in the parish of Belubula, county of Bathurst.

Geological Survey, Department of Mines and Agriculture, 26 July, 1899.

Sir,

I have the honor to report having, in accordance with your instructions, inspected the Crown lands within the western portion of the parish of Belubula, county of Bathurst, with a view of determining whether for the protection of mining interests, a reserve has been rendered necessary by the conversion of Church and School lands into ordinary Crown lands. From a careful examination of the locality, I beg to strongly recommend that the area shown by blue pencil, hatching and border, on the accompanying litho. be reserved from sale for mining purposes.

The included land is principally stony and precipitous, and only suitable for grazing purposes, hence reservation would not interfere with settlement, and the present grass rights could be maintained.

The mining lease holdings at present in force are shown by pink tint, and in addition a number of fossickers are working the alluvial gullies and creek beds falling into the Belubula River from the neighbourhood of Burnt Yards. Their number is likely to be increased now that the drought has broken up.

An important crushing and concentrating plant has just been completed at the Belubula Mine—in the south-west corner of the area—for the purpose of treating the extensive auriferous sills or bedded intrusive rocks which occur on both sides of the Belubula River, the present workings being mainly on the east side. These auriferous beds dip north-westerly in the area proposed to be reserved, and may be worked some distance from the river if present tests with the unoxidised pyritous rock prove successful. In conjunction with these workings one of the finest masonry dams in the Colony has been constructed across the river, impounding an immense water supply at an elevation sufficient to afford abundant pressure for all motive power required.

Above the Frenchmen's mine Messrs. David and Stonier, Geological Surveyors, drew special attention in the Annual Report of this Department, 1890, p. 239, to a deep lead under basalt on the top of the hill which was untried. These localities are within the proposed reservation.

I have, &amp;c.,

JOSEPH E. CARNE,

Geological Surveyor.

## APPENDIX 19.

## Report on a proposed deep test of the Auriferous Heath Lands of the North Coast between the Richmond and Clarence Rivers.

Sir,

Geological Survey, Department of Mines and Agriculture, September, 1899.

I have the honor to report having met the principal officers of the Woodburn Progress Committee, and discussed with them Mr. Monaghan's scheme for a deep test of the heath lands of the neighbouring coast district. McAuley's Lead, Jerusalem Creek, is most favoured by the Committee as the site of proposed operations, the preference being due simply to the richness of the shallow workings at this point. The latter can, however, hardly be accepted as indicative of conditions at lower levels, as storms and shifting currents during deposition render it improbable that earlier sites of natural concentration correspond

correspond with the vertical planes of later accumulations. The vicinity of McAuley's Lead is, however, as favourable as any other portion of the level heath lands for the purpose selected. The questions, therefore, for consideration are, (1) whether the prospects warrant the cost of a deep test, and (2) the best means of accomplishing it.

The so-called "leads" of the heath lands have in no instance been worked on a true bottom or bed-rock. The auriferous sands are underlaid by layers of sand to the lowest level reached, viz., about 36 feet from the surface, or about 6 feet below high-water mark.

Below the characteristic compact "black rock"—sand coloured and cemented by carbonaceous matter resulting from swampy conditions—the sands are loose, and saturated with water to an extent preventing satisfactory prospecting by the ordinary sludger. At Broadwater, and Jerusalem Creek heads, the gold sand is just above the black rock; at McAuley's Lead it occurs as a thin layer within the black rock. Below the latter, colours only have been obtained in a very few of the deeper sludger holes put down by the Government and private prospecting parties. The limit of test by these means was, however, very trifling compared with the probable thickness of the sand beds under the low heath lands. During the prospecting operations carried out in 1886, under the direction and assistance of the Prospecting Board, 5,659 sludger holes were put down between the Esk and Richmond Rivers, aggregating 87,326 feet, and averaging 15.43 feet, the special object being to prove whether other "runs" of old beaches of auriferous sand occurred parallel to those already discovered. New leads were determined at McAuley's and Broadwater at shallow levels capable of being worked under the usual primitive and inexpensive methods of the beach and heath miners.

The low level tests now proposed will prove the sands below sea level. Judging from the process of natural concentration observable on the present beaches, which takes place chiefly, if not wholly, between high and low water, where the lapping or panning action of the waves draws off the lighter material, leaving the heavier stranded in comparatively clean layers, the prospects of rich concentrates below sea-level do not appear as favourable as above it.

Still the fact that no true bottom has yet been reached—excepting at a distance inland from the coast—makes it desirable that an effort should be made to reach it, and in so doing prove the existence or otherwise of lower auriferous sands. If such exist it is probable that pumping would be the only possible method of extraction from below sea-level.

The second question, viz.:—"The best means of accomplishing deep testing," brings up Mr. Monaghan's scheme of sinking by means of a sectional cylinder tube to be telescoped in 3-foot lengths, with a diameter of 2 ft. 6 in., at 50 feet. The tubing to be of 14 gauge,  $\frac{1}{8}$  of an inch and  $\frac{3}{16}$  of an inch—as per section in Mr. Hoskins' letter.

This scheme can at once be dismissed as impracticable and inadvisable. In the first place the tube would collapse under the lateral pressure as soon as the water and sand were removed. In the second the working diameter at 50 feet, viz., 2 ft. 6 in. is wholly inadequate for further sinking, and this level is but 14 feet deeper than already reached by sludger. Finally it would be very inadvisable under any circumstances to incur the heavy cost of a shaft for a purely prospecting venture before adopting simpler and cheaper methods of determining the necessity for a shaft.

If the Prospecting Board should decide to recommend further testing of the heath lands, it would be advisable to retain control of the work. A sand pump with interchangeable cutting tools, &c., for harder bands, and about 100 feet of tubing, would be the cheapest and speediest method of testing. A series of holes would be necessary to render the work effective. Three men would be sufficient for such a plant.

If the test should be applied it will be well to defer operations until mid-summer, as owing to recent heavy rains large areas of the surface are in a swampy condition.

I have, &c.,  
JOSEPH E. CARNE,  
Geological Surveyor.

The Government Geologist.

#### APPENDIX 20.

##### Report on proposed boring for deep auriferous leads at Urana.

Sir, Geological Survey, Department Mines and Agriculture, 22 December, 1899.

I have the honor to report having examined the country in the immediate vicinity of Urana for the purpose of ascertaining whether the geological features indicate the existence of an auriferous deep lead, as surmised by the residents from data obtained in sinking a town well to a depth of 115 feet, at which level a good supply of potable water was struck.

The inspection was the outcome of a petition and deputation to the Minister for Mines for assistance to explore the "Great Urana Alluvial Basin," which the petitioners asserted had been described by the late Rev. W. B. Clarke, as destined someday to prove one of the richest and most extensive gold-fields in New South Wales. It is advisable at the outset to state that there is no published record of such a statement, nor any like evidence that Mr. Clarke ever visited Urana.

Doubts were also expressed as to true bedrock having been reached in the nearest gold workings about 9 miles north-east, but the shafts afford conclusive evidence of the fact.

Gold was discovered here in 1876 by J. Slinky and Party, who performed a considerable amount of work without payable results. Further prospecting has been carried on at intervals since, and whilst reports are current as to discovery of several small rich patches of wash, no returns are obtainable of the actual yield from the field. At the time of inspection one claim only was at work.

Sinking is about 20 feet through drift on to a sandstone bottom, traversed by thin quartz veins and threads. Driving is done in the bedrock, which is softer than the boulder wash; 2 or 3 inches of wash only are removed from the bottom, as the gold is too fine and distributed above it to pay to remove.

The difference between this run of wash and the gravelly drifts and sand below the clays in the water shaft at Urana, lies in the fact that the former was confined to an earlier drainage channel into which the gold contents were naturally ground sluiced and concentrated, whilst the latter have been spread out in wide sheets in the old Tertiary Basin, in which the gold contents (if any) would be too distributed to have any value.

In

In Straun's Well—110 feet—about 3 miles north-easterly from the town well, similar pipe-clays, sands, and gravels are met as in the latter, and a little water is making at the level reached, showing the sheet like spread of the beds in question. On the western margin of the Urana Lake, about 6 miles north-west of the town, a rise in the surface level has brought these beds into view, where they form a weathered escarpment about 20 feet high consisting of compacted sands, gravels, and indurated pipe-clays.

The whole evidence of well-sinking and boring in the south-western Tertiary plains is against the probability of gold leads being found at a depth, where there is no evidence of an auriferous system or watershed to give rise to distinct channels.

The gravels intercalated between impervious pipeclay layers, which engendered the hope of auriferous leads at Urana, are a common and oft repeated feature of the Tertiary basin, as it deepens to the west.

At the Hay bore between 1,000 and 1,100 feet of alternating sands, clays, and gravels, were passed through to bed-rock.

These beds at Urana have been derived from Devonian (?) sandstones and conglomerates, small denuded outcrops of which are still visible near Cullivel Lake and the gold-field reserve. The conspicuous Rock Mountain, near the railway station of that name, about 50 miles distant, I believe consists of massive beds of similar formation and age.

From a careful consideration of surrounding features, and the evidence of well sinking, I am of opinion that the probabilities of discovering payable auriferous leads in the vicinity of Urana are not strong enough to warrant the expenditure of public money in boring.

I have, &c.,  
JOSEPH E. CARNE,  
Geological Surveyor.

The Government Geologist.

#### APPENDIX 21.

##### Report on the Tuglow Copper and Mt. Werong Silver-mines.

Geological Survey, Department of Mines and Agriculture, 2 January, 1900.

Sir,

I have the honor to report that, in accordance with your instructions, I visited Tuglow, about 20 miles S. 20° E. of Oberon, for the purpose of examining the discoveries of copper ores which have recently been attracting some attention.

The mineral field is situated in the parish of Abercorn, county of Westmoreland, within the Oberon Division of the Bathurst Mining District. The nearest railway station is Tarana, on the Great Western Line, distant 42 miles, *via* Shooter's Hill and Oberon, over a well-formed road for about 35 miles, and a fair bush track for the remainder. Tarana lies 120 miles west, by rail, from Sydney.

Upper Silurian sedimentary rocks—in places much altered—and limestones are the most pronounced geological features. Quartz porphyry and dioritic intrusions are also represented.

Permanent water occurs close to the various lodes in the Tuglow River and its tributaries, Charles-field and other adjacent creeks. Timber for all purposes is close and abundant. Limestone flux, as already stated, is one of the principal geological features of the locality.

Within about 3 miles to the south-east several ironstone outcrops occur, which offer fair promise of a considerable quantity of fluxing material if required.

The occurrence of copper ores in the Tuglow district has been known for about ten years, and a little desultory attention has been given them at intervals by Mr. J. W. Bouchier and others, but the exceedingly low values of copper then ruling militated against extensive exploration. The recent rapid and phenomenal advance has, however, renewed and stimulated interest, and prospecting has proceeded to a certain extent on more practical lines.

Negotiations for sale, or for the introduction of capital, have, however, not yet successfully eventuated.

Several of the lodes occur in Mr. Bouchier's private land, portions 49 and 31. The most important, so far as development has proceeded, is situated in M.L. 1, within the Tuglow Gold-field Reserve. This lease of 20 acres embraces the most recent discovery, locally known as "Bouchier's Mine," after the finder. Two flat-lying veins occur here about 15 feet apart at the outcrops, striking apparently about N. 7° E., and dipping west at an angle of 38° from the horizontal. Efforts to trace the lodes on their strike outside of the lease have so far been unsuccessful.

An underlay shaft following the lower or eastern lode had reached a depth of about 70 feet at the time of inspection, at which level soakage water is becoming troublesome owing to the flat dip rather than to quantity. At present it is bailed by hand into a vertical shaft, and thence raised by bucket to the surface; but this primitive method will shortly have to be abandoned. A vertical shaft to cut the lode at a considerable depth is required for proper development. If the present underlay remains constant, a shaft started about 200 feet west of the outcrop would cut the lode at a vertical depth of 150 feet.

About 42 feet west from the mouth of the underlay shaft a vertical shaft has been carried down 38 feet to the under lode. This shaft intersects the western or upper lode about 6 feet above the lower; the former has also been opened from the surface by an intermediate underlay shaft connecting with the vertical, and extending a few feet west of it. Some good ore was extracted from it in the upper level, but gave place southerly to a soft clay dig which should be followed in search of other makes of ore.

The thickness of the main or lower lode ranges from 2 feet to 4 feet. A few feet back from the face a slight fault caused a little trouble and pinching, but the lode at the face is strengthening.

Underhand stoping is carried on for a few feet on either side of the shaft. The lodestuff consists of quartz with sulphides of copper, zinc, lead, and iron. In the poorer portions of the lode quartz makes solid; in the richer the sulphides become concentrated and massive. A kaolin dig, carrying a little ore, sometimes replaces the other lode minerals or coats the walls.

The

The ore is dressed by hand at the surface, the "firsts" alone being dispatched. The following assays were made in the Departmental Laboratory, under Mr. J. C. Mingaye, F.C.S., of an average sample of the selected "firsts," and of the discarded kaolin ore, the almost barren quartz being rejected :—

5040—"Firsts"—Sulphides of copper, zinc, lead, and iron, yielding :—

Copper	...	...	...	...	...	...	10.45 per cent.
Zinc...	...	...	...	...	...	...	7.94 "
Lead	...	...	...	...	...	...	22.71 "
Silver	...	...	...	...	...	...	7 oz. 3 dwt. 17 gr. per ton.
Gold	...	...	...	...	...	...	a trace (under 2 dwt). "

5,041—Siliceous kaolin ore—"Seconds"—yielding :—

Copper	...	...	...	...	...	...	2.22 per cent.
Silver	...	...	...	...	...	...	1 oz. 1 dwt. 18 gr. per ton.
Gold	...	...	...	...	...	...	3 dwt. 6 gr. "

5,047—Siliceous "black ore" from face at 70 feet, yielding :—

Copper	...	...	...	...	...	...	7.85 per cent.
Silver	...	...	...	...	...	...	8 oz. 18 dwt. 14 gr.
Gold	...	...	...	...	...	...	Nil.

From the mine the following bulk parcels of ore have been treated to date :—

Great Cobar Syndicate Smelting Works, Lithgow.

Tons	cwt.	qr.		Copper.
5	15	2	.....	22 per cent.
5	17	3	.....	11.5 "

Smelting Company of Australia, Dapto.

Tons	cwt.	qr.	lb.		Copper.	Lead.	Gold per ton.
13	5	1	12	.....	13.34	.....	1 dwt. 0 gr.
10	7	2	25	.....	15.3	14.9	17 " 14 "
9	5	3	27	.....	16.51	.....	
14	0	0	10	.....	10.7	16.8	
27	10	0	23	.....	6.5	14.1	
Total.....	86	2	2	13	Average copper contents, 11.23 per cent.		

The amount represents net dry weight, and the yields the gross contents. From the latter the usual smelting deduction of 2 per cent. has to be abstracted, leaving an average negotiable return of 9.23 per cent. to defray cost of the present system of working, transport, and treatment, and afford a margin for profit. The following figures regarding transport and treatment alone cut the profitable margin extremely fine :—

	£	s.	d.	
Carriage by team to Tarana .....	1	10	0	per ton.
Carriage by rail to Dapto, and haulage .....	0	8	7	"
Smelting charge .....	2	0	0	"
	£3	18	7	

As the gold contents in the three last parcels have not been estimated, it may be taken for granted that they have fallen below a workable average, as indicated by the assays already quoted ; hence the value of the copper ore is now only slightly enhanced by a small percentage of lead over and above the smelting deduction of 10 per cent.

Judging by the assays also, the silver contents of the sulphide ores at present mined show a slight return over the usual extraction charge of 1s. for each unit of copper in the ore (a similar charge of 3d. per unit is also made for gold extraction). Possibly the silver contents have been disregarded, as the Smelting Company's tariff provides that, "where the gold and silver contents left after usual deductions are made will not pay for extraction, that metal, or those metals are disregarded, and the ore treated as a copper ore only."

*Cotton and Fraser's Mine.*—Portion 49, situated about 10 chains S. 35° E. from the north-west corner of the portion.

Two lodes with quartz outcrops junction in this property.

The main shaft—Fraser's—is being sunk at the contact.

Copper ore was first discovered here about eight years ago by the owner of the portion—J. W. Bouchier—who in conjunction with others sank 60 feet on the western lode about 50 feet north of Fraser's shaft. At 125 feet north on the same line Cotton's shaft is being sunk on a small vein, which if a continuation of the main lode, reveals abnormal thinning.

From Fraser's shaft the western lode has an apparent bearing of N. 10° E. and the eastern N. 40° E.

About 20 feet north from this shaft the following section is revealed in a trench across the two outcrops :—

Fraser's shaft is in the western lode which, at a depth of 40 feet, dips east at 45°. Several feet of lodestuff are exposed at 40 feet, but the actual thickness can only be ascertained by a crosscut. There is little

little doubt, however, that a considerable body of low-grade ore occurs at this point, enclosing bunches of higher value. The lodestuff consists of quartz, with copper, zinc, and iron sulphides sparingly distributed. A little native copper occurs in the footwall.

A selected sample of the richer portions of the lode, tested in the Departmental Laboratory, yielded the following results :—

5,046—Siliceous sulphide ore :—

Copper .....	7.80 per cent.
Zinc.....	20.54.
Silver .....	13 dwt. 1 gr. per ton.
Gold .....	a trace (under 2 dwt.) per ton.

Whilst from an average of the seconds which form the great bulk of the lodestuff in view, the following results were obtained :—

5,045—Siliceous sulphide ore :—

Copper.....	3.67 per cent.
Zinc.....	15.94 "
Silver .....	a trace (under 2 dwt.) per ton.
Gold.....	a trace ( " " ) "

From this mine the following bulk parcels of ore have been treated :—

Great Cobar Syndicate Smelting Works, Lithgow.

Tons	cwt.	qr.	lb.	Copper.	Gold per ton.	Silver per ton.
11	17	0	0	6.29 per cent.	13 gr.	14 dwt. 16 gr.

The Smelting Company of Australia, Dapto

Tons	cwt.	qr.	lb.	Copper.	Gold per ton.
14	3	0	26	8.9 per cent.	13 dwt. 21 gr.
24	15	1	4	5.4 "	3 " 0 "
50	15	3	2	Average copper contents, 6.5 per cent.	

As in the previous case, net dry weight and gross copper contents are represented in these returns. Abstracting the smelting deduction leaves the consignees but 4.5 per cent. of copper to bear the cost of transport and treatment, to say nothing of mining, which must land them on the wrong side of the ledger.

Though the largest body of ore in the field is exposed in Fraser's shaft, it is undeniable that it cannot be successfully worked under present conditions. From the highly siliceous nature of the gangue it is equally certain that, even with local smelting works, it could not be treated without concentration either with jigs or vanners. A proportion of direct smelting ore could certainly be selected by spalling and picking, but the bulk of the output would require gravity separation.

The chief desideratum under these circumstances is proof of the extent of the deposit by further sinking, cross-cutting, and driving, because it goes without saying that the lower the grade the larger the deposit required for successful operation. The excessive proportion of zinc in the ore of both grades further complicates the issue by its deleterious action on smelting. Careful blending with cleaner ores must be looked to to reduce the evil effects of excess of zinc in local furnaces, if established. If the ore now being raised in the adjoining claim—Smithson and Party's—proves to be in quantity, it will be very suitable for mixing with the ore in question, and with Bouchier's ore from M.L. 1, which also contains its allowable limit of zinc.

It will only be possible by co-operation and combination amongst the several proprietaries to ensure a sufficiency of suitable blending ore to run a local smelting furnace.

A fourth shaft has been sunk about 215 feet south of Fraser's shaft, but evidently off the strike of the lode, which is exposed in a shallow trench further west, about 30 feet nearer the main shaft. Here the lode consists of quartz with stains of carbonate of copper about 4 feet in thickness.

Smithson and Party are working a parallel lode about 3.80 chains south-east from Fraser's shaft, the strike being N. 10° E., and the dip E. 10° S. at 55°. Near the surface the dip was nearly vertical, but turned rather suddenly to the angle mentioned, which was measured between the 40 and 50 feet levels.

The first shaft in this property was not successful in locating payable ore. A thin quartz vein with iron pyrites and a little copper pyrites was followed from the surface. At 20 feet a small bunch of fair ore was met with, which gave place to a thin vein dipping west, and which was followed to 58 feet, into a brecciated calcite varying up to 15 inches in thickness, when the shaft was abandoned.

The present working shaft was started 65 feet further south, following a nearly vertical wall, but ore did not make until the dip changed to the eastward. At 55 feet, about 20 inches of good grade yellow sulphide is exposed, divided by layers of country.

On the hanging wall a soft dig occurs, but there is evidence of mineralisation in the wall which has not been penetrated. A persistent quartz vein about 15 inches thick occurs on the footwall, but unfortunately carries no ore of value.

As the good ore has only recently been struck, no bulk tests have yet been made; but an idea of the grade may be gathered from the following average assays, selected by napping a considerable quantity of ore at the surface :—

5,043—Siliceous sulphides (firsts) yielding :—

Copper .....	14.72 per cent.
Silver.....	19 dwt. 14 gr. per ton.
Gold .....	A trace (under 2 dwt.).

5,044—Quartz, with sulphides ("seconds" discarded from the "firsts," yielding :—

Copper .....	3.30 per cent.
Silver.....	9 dwt. 19 gr. per ton.
Gold .....	Nil.

As

As little work had been done since the recent discovery of the above quality ore, it would be hazardous to offer an opinion as to the probable extent or persistence of the lode, especially in view of the mingling of ore and country at the present level. The grade is fairly high and the ore comparatively clean.

In none of the mines mentioned has the length of the ore chute yet been determined or indicated by strike levels.

On the west bank of the Charlesfield Creek, close to Mr. Bouchier's house, in portion 31, two shafts have been sunk on a quartz vein containing a little iron and copper pyrites, from which an average sample yielded :—

5,042—Copper .....	1·5 per cent.
Silver .....	16 dwt. 8 gr. per ton.
Gold.....	Nil.

As these shafts are abandoned and full of water, a detail inspection was impossible.

Brennan and Party are sinking (M.L. 2) in black mineralised slate carrying pyrites in parts, and occasionally a little copper and lead sulphides and calcite, for the purpose of endeavouring to cut Bouchier's lode on its southern strike. As the shaft lies about 100 feet west of the strike level, the lode, if continuous, should be reached in about 75 or 80 feet vertical if the dip remain constant.

About  $2\frac{1}{2}$  chains N.  $65^\circ$  W. from the N.W. corner of M.L. 1, Irskine and Party sank 30 feet in a quartz reef carrying iron pyrites and a little copper pyrites and traces of carbonates.

At  $8\frac{1}{2}$  chains north from Bouchier's mine in M.L. 1, the same party is at present engaged sinking, under aid, in a quartz reef upwards of 4 feet thick in places. The quartz contains iron pyrites with traces of blende and copper pyrites. The 43 feet level had been reached at the time of inspection, but no tests have been made of the lodestuff.

Brennan and Party were also engaged driving a tunnel close to Sheep-station Creek, about 4 miles north from Bouchier's lease, where traces of copper carbonates occur in slate country. The indications, however, are not favourable for a permanent lode. An assay of pyritous quartz from the mineralised belt, proposed to be cut by the tunnel, yielded :—“5,050—Silver, 18 dwt. 12 gr. per ton, but no trace of gold.”

Work, I believe, has since been abandoned, and effort is concentrated on a small outcrop a few chains south; the prospects, however, are little better than in the former case.

Numerous quartz reefs occur on Mr. Bouchier's property at Tuglow, some of which have been superficially tested for gold. From an unopened outcrop north of the potato ground, in portion 50, a sample of ferruginous quartz yielded :—“5,048—Silver, 7 dwt. 15 gr. per ton; no gold.”

Another sample from road near the above yielded :—“5,059—Gold, 4 dwt. 8 gr. per ton; silver, 7 dwt. 15 gr. per ton.”

Another sample from Gid's Reef, about 20 chains south-south-east from north-west corner of portion 10, of ferruginous quartz with pyromorphite, yielded :—“5,035—Silver, 1 oz. 6 dwt. 3 gr. per ton; no gold.”

In the same portion (10) ironstone out crops on the back of a long ridge, falling north-easterly to Gid's Reef. A similar ridge occurs at the north-east corner of the portion. Though the outcrop in both cases is extensive, I am inclined to regard both as superficial, and the result of decomposition and weathering of the country.

About 30 chains easterly from the south-east corner of this same block a small outcrop of solid brown iron ore occurs in a slate. From the nature of its occurrence I am of opinion that it has been formed by a chalybeate spring issuing from the country. A sample selected for assay yielded :—“5,039—Brown iron ore—Metallic iron, 53·98 per cent.; silica, 3·57 per cent.”

This ore will be very suitable for fluxing purposes, but the outcrop is rather difficult of access from the copper-mine.

Traces of copper in ferruginous slate were found about 30 chains south of the above deposit; a shaft has been sunk upon it, but nothing defined was discovered.

*Mount Werong Silver-mine.*—As Mount Werong Silver-mine is situated in the parish of Banshea, about 6 miles S. 30 degrees E. (12 miles by road) from the Tuglow Copper-mines, it was included in the examination, in view of the possibility of the erection of smelting works at the former.

The lode known under the above name was discovered some years ago in the bed of Lanigan's Creek, one of the heads of Werong Creek. The lode cuts diagonally across the creek. A little work was done at the time of discovery by means of a shallow cut into the bank on the south-western strike of the lode, but the site is unsuitable, except in dry weather, owing to liability of flooding. Between this point and the back of the spur to the south-west there is a difference of 120 feet in elevation. The lode strikes N.  $55^\circ$  W., and underlays north-easterly at  $82^\circ$ , in quartz felsite.

The following cross-section was measured in the creek-bed :—

The present holders of the mine—Messrs. E. J. Clark and F. M. Bartlett—have recently extracted 6 tons of ore for a trial treatment at the Smelting Company of Australia's Works, Dapto, but the returns are not yet to hand.

The

The ore consists of felspathic rock and quartz, carrying galena, blende, and pyrites. A little copper pyrites is making in part. With a view of determining the best grade of ore for dispatch, as the carriage to rail alone costs 40s. per ton, samples of roughly dressed galena and of blende were submitted for assay with the following results :—

5,036—Blende, pyrites, a little galena, and quartz, yielding :—

Silver .....	2 oz. 5 dwt. 17 gr. per ton.
Gold .....	a trace (under 2 dwt.) per ton.
Zinc .....	36.75 per cent.
Lead .....	10.58 per cent.

5,037—Galena, blende, pyrites, and quartz, yielding :—

Silver .....	18 oz. 1 dwt. 12 gr. per ton.
Gold .....	a trace (under 2 dwt.) per ton.
Zinc .....	15·84 per cent.
Lead .....	41·77 per cent.

About 100 yards higher up the creek a second lode crosses the channel at right angles to its course on a N. 70° W. course. Here it shows about 2 feet wide, consisting of veins of quartz, galena, blende, and pyrites in hard quartz felsite. The constant flow of water keeps the ore vein clean and unoxidised.

A little superficial prospecting was also done on this lode when first discovered. A sample chipped from the creek-bed and bank yielded on assay :—

5,038—Ferruginous quartz with pyrites, blende, and galena, yielding:—

Silver .....	6 oz. 19 dwt. 9 gr. per ton.
Gold .....	A trace (under 2 dwt.) ..

Taking the best selected ore from the main lode, viz., that containing the most lead and silver, into consideration, it is at once apparent that it is impossible to carry on operations profitably, owing to cost of carriage, smelting, &c., in addition to which the country is hard, and the cost of extraction correspondingly high.

At the smelting works, a deduction of 4 oz. per ton would be made for loss in silver extraction, and a smelting charge of about 35s. per ton. The available silver would then be paid for at 3d. per oz. less than standard. From the lead a smelting deduction of 15 per cent. would be made, and 40s. per ton from London quotations for soft Spanish lead.

Several veins were noticed crossing the bare creek-bed just below the main lode, showing the extent of mineralisation of the quartz felsite, which is apparently identical with the quartz felsite of the Peaks Silver-field, Upper Burragorang, about 30 miles south south-easterly. The locality offers considerable inducement for prospecting, which has hardly yet begun in it. As the creek falls abruptly just below the mine, water power would be available for crushing and concentrating, if such should be required in future.

Reverting to the Tuglow Copper-mines, the descriptive notes in this paper are, perhaps, sufficient to indicate the chief want of the field, viz., vigorous prospecting, which should precede the erection of the furnaces agitated for. A reverberatory matting furnace would, perhaps, be most suitable for the class of ore at present revealed, in which form the product should be dispatched to the nearest refinery. To those on the field who are unfamiliar with copper smelting, it is necessary to reiterate that, contrary to their belief, it is impossible to smelt the low grade, siliceous, seconds, without preliminary concentration.

In conclusion, I desire to acknowledge the assistance rendered me during inspection, by Mr. J. W. Bourchier, of Tuglow. I have, &c..

2 January, 1900.

The Government Geologist.

I have, &c.,

JOSEPH F. CARNE,

Geological Surveyor.

## APPENDIX 22.

Report of the Albert Water-holes and Orange Plains Copper Discoveries, West Bogan.

Sir, Geological Survey, Department of Mines and Agriculture, 8 January, 1900.

I have the honor to report having examined the recent discoveries of copper ores in the Albert Water-holes and Orange Plains Pastoral Holdings, in the county of Kennedy, and within the Trundle Division of the Lachlan Mining District.

The former are situated in the parish of Albert, 12 miles S.W., and the latter in the parish of Beaconsfield, 14 miles W. from Dandaloo, on the Bogan River.

Trangie, 321 miles from Sydney, on the Great Western Line, is the nearest railway station, distant about 40 miles over a level but exceedingly heavy road in wet weather.

The two groups of deposits lie about  $8\frac{1}{2}$  miles apart in a N.  $34^{\circ}$  E. direction. Those of Orange Plains are located about 2 miles south-east of the old Orange Plains Copper-mine, which was opened over twenty years ago without success.

Another old mine—the Caroline—lies about 3 miles N. 40° E. from the new find, in the parish of Tabratong, formerly described as Carolina.

Copper ore was discovered at Albert Water-holes by C. J. Keenan, on the 25th December, 1898, and the following leases were subsequently surveyed by Mr. Mining-Surveyor Cambage, who furnished some particulars of the occurrence :—

- M.L. 1—Robert Hall and Party, 40 acres.  
M.L. 2—C. J. Keenan, sen., and Party, 25 acres.  
M.L. 3—" " 38 acres.  
M.L. 4—W. A. Clarke and Party, 40 acres.

The lode strikes N. 75° E., and dips S.W. at 78°, in schist country. Its thickness varies from 6 inches to 2 feet.

Quartz

Quartz is the principal mineral in the strongest parts of the lode, and, where it is most solid, the copper vein becomes broken and unsettled. Occasional bunches of good grey ore occur; in other parts it is too distributed through the quartz matrix to be of value.

The shaft had been sunk 96 feet, and preparations were being made for continuation of sinking. A drive to the west for 20 feet ends in unproductive quartz, but a vein of good quartz is underfoot in the shaft, which will no doubt make and pinch as above.

From the 75-foot level stoping has been carried up 15 feet for a length of about 30 feet, from which the following parcels of ore were dispatched, after hand-dressing and picking at the surface. Unfortunately the percentage of copper is not given in the following figures from the Smelting Company of Australia's returns, supplied by Mr. Gaffney, who, in conjunction with others, has just taken over the mine on a purchasing option.

1899.	Tons.	cwt.	qr.	lb.	Value.
22 April .....	5	8	0	0	£67 9 9
9 October .....	5	2	0	0	62 5 9
14     ".....	5	1	0	7	62 14 1
2 November .....	4	17	0	0	53 3 6
1 December .....	9	18	2	7	77 15 4
21     ".....	4	16	0	0	44 0 7
Total .....	35	2	2	24	£369 8 7
Equal to £10 11s. 1d. per ton of ore.					

The outcrop of the lode is traceable by quartz blocks and rubble for some distance on its north-westerly strike into M.L. 2. Just at the boundary of the two leases, about 8 chains from the main workings in M.L. 1, a shaft has been sunk 25 feet in quartz, with slight stains of copper carbonates. Three chains further along the strike a vertical shaft has been started to cut the lode at about 150 feet, on the dip side, a very doubtful enterprise, considering that nothing has yet been proved in the lode itself within this lease. Vertical shafts are advisable only in developing a proved deposit; in prospecting, the lode or vein should be closely followed.

M.L. 3 adjoins the above leases on the south. The lode it covers is a later discovery, opened in July last. The strike is N. 60° E., and the dip N. 30° W. at 65°. Here about 1 foot of dreggy quartz fills the channel, between well-defined walls. The shaft following the vein is 60 feet, with a drive of about 15 feet at the 20-foot level. Eleven tons of ore extracted during operations are reported to have yielded from 16 to 24 per cent. of copper at the Sulphide Corporation Works, Cockle Creek. Three tons were on the road thither at the time of inspection. The ore contains a trace of gold only.

M.L. 4 adjoins M.L. 3 on the south. Here aid from the Prospecting Vote has been granted to sink 75 feet on a quartz vein, slightly stained with copper carbonates, striking N. 30° E., and dipping N. 60° W. at 52°.

The footwall is well defined, and coated with a soft dig, carrying copper stains. A sample from the lowest level, assayed in the Departmental Laboratory, yielded the following return:—

No. 5,193.	
Gold.....	A trace (under 2 dwt.) per ton.
Silver .....	3 dwt. 6 gr. per ton.

About 5 chains north of the Prospectors' shaft in M.L. 1, a quartz vein between 2 and 3 feet wide, striking E. and W., and dipping N., was opened for gold in 1893 to a depth of about 25 feet. Stains of copper carbonates are visible. A sample treated for gold yielded:—

No. 5,195.	
Gold and silver .....	Traces (under 2 dwt.).

The *Orange Plains* discoveries occur in the parish of Beaconsfield, about 2 miles south-easterly from the old Orange Plains Copper-mine, which was opened up to a depth of about 60 feet in several shafts by Mr. T. L. Richardson and others in 1884. The lode strikes N. 70° E. in schist, and dips south-easterly. The thickness varies from 3 to 4 feet. A fair amount of iron oxide caps the lode, chiefly arising from oxidation of the country, which here has a hornblendic or chloritic character.

No payable ore body was discovered during the above operations, but these hardly appear to have exhausted the possibilities of the deposit, which has a more promising outcrop than any of the later discoveries.

At the time the mine was in operation the existence of copper-stained country was known about 3 miles easterly, but nothing was done to test it. Possibly the site is identical with the recent discoveries of July last. Prior to the latter the prospectors—Andrews and Party—gave some attention to the old mine, which is now held by Messrs. Triffett and Lewis, who have been in possession since November last. The latter are sinking at the north-eastern end of the old workings, on a flat-lying 6-inch vein, striking N. 70° E., and dipping south-east, thus corresponding with the direction and dip of the main lode, of which it is doubtless a continuation. The ore is dreggy in part, having more the appearance of impregnated country. A sample from a richer bunch in the 12-foot shaft, selected for assay, yielded:—

No. 5,197.	
Copper.....	16.82 per cent.
Silver .....	1 oz. 1 dwt. 18 gr. per ton.
Gold.....	A trace (under 2 dwt.) per ton.

At the new finds the Prospectors' claim has recently been converted into a lease—M.L. 8—of 40 acres. The first leases surveyed were:—

- M.L. 3—John Sloan, 40 acres.
- M.L. 4—          "          20 acres.
- M.L. 5—A. L. Harvey and Party, 30 acres.

Other leases are reported to have since been applied for, but work was practically at a standstill at the date of inspection.

The country consists of mica schist, with occasional beds of quartzite

Little progress has been made in the development of the prospecting lease—Andrews and Party's—a depth of about 14 feet only being reached in an underlay shaft, and 3 or 4 feet in a trench of about 15 feet on the lode.

A costeen across the southern strike, at a short distance from the shaft, failed to disclose more than traces of the lode.

The strike of the ore body exposed in the shaft is N. 60° E., and the dip S. 30° E. at 55°. Its thickness is from 10 to 12 inches. A small bunch of good ferruginous carbonate ore remains at surface, but below it becomes mixed with the country. The outcrop is associated with ferruginous quartzite, passing in parts almost into an iron ore, but the quantity of the latter is very limited.

Eight tons of ore extracted from the shaft and trench are reported to have yielded at the Smelting Works, Dapto, copper at the rate of 11·7 per cent., and gold at the rate of 8 dwt. per ton.

A sample selected from a small heap of dressed ore at surface yielded :—

No. 5,196.		
Copper .....	18·52 per cent.	
Silver .....	10 dwt. 21 grs. per ton.	
Gold .....	a trace (under 2 dwt.) per ton.	

In M.Ls. 3, 4, 5 no defined lodes have yet been discovered. In No. 3, a shaft has just been begun in solid country, for the purpose of cutting a supposed lode formation opened in a trench near by, but nothing more than slight stains of copper carbonate are visible in the country opened by the trench.

An opening in an adjoining claim, held as a mineral prospecting area, had been made in an outcrop of hard vitreous quartzite, in the joints of which slight stains of copper carbonate occur.

About 2 miles north-easterly from this group of leases, stains of copper ore occur in contorted schist over a fairly large area, locally named the Grand Central Junction; but there is no visible indication of a vein or defined lode, as the country rock is almost entirely obscured by a covering of alluvial soil. Trenching will be necessary to determine whether the copper occurs simply as an impregnation of the country or not.

Gold was reported obtainable in pan prospects from any of the exposed outcrops, but the following assays of selected samples fail to substantiate the report :—

No. 5,198.		
Silver .....	3 dwt. per ton.	
Gold .....	a trace (under 2 dwt.) per ton.	

No. 5,199.		
Copper.....	6·52 per cent.	
Gold and Silver.....	traces.	

The Caroline Copper-mine before mentioned was also visited, but as the last work instituted had ceased for some months, inspection of the underground workings was impossible.

According to the statement of Mr. L. McAlister, of Wellington, this lode was discovered by him about 1872, when the site was secured by three 40-acre blocks. The outcrop was about 3 feet wide and stood about 1 ft. 6 in. above the surface. A shaft was sunk 80 feet, and 6 tons of ore sent to the Icely Smelting Works, near Lewis Ponds, yielded 27½ per cent. of copper. A further consignment of 6 tons sent to the Goodrich Smelting Works, near Yeoval, also yielded 27 per cent. of copper.

In 1898, the lode was again taken up by a Cobar syndicate which supplied the following particulars through Mr. Gillard, of Cobar, for the writer's paper on the Copper industry of New South Wales :—"We thoroughly overhauled the surface of the mine, and find that there are three shafts, one supposed to be 140 feet; this shaft is 8 feet by 4 feet. The next shaft is supposed to be 50 feet. The other shaft is 14 feet deep. The 50-foot shaft is on the lode, which is 3 feet wide at the bottom, containing good ore. The lode strikes north-westerly in a 40-acre block.

The net profit on 6 tons 4 cwt. of ore sold in March, 1899, was £36 7s. 6d. The next parcel of 6 tons, treated in May, returned a net profit of £27 4s.

A mineral lease was granted on 11th May, 1898, to W. Meriel and W. Rowe.

The area of cupriferous country lying west of the Bogan River, between the Lachlan and Darling Rivers, roughly scaled, approximates to 22,500 miles, embracing the whole or portions of the following counties :—

Cunningham	Robinson
Kennedy	Flinders
Blaxland	Canbelego.
Mouramba	

Within it occur the well-known Great Cobar, Nymagee, Girilambone, Mount Hope, and Great Central Copper-mines, and numerous prospecting ventures of lesser note. In certain portions, Orange Plains and Melrose for example, there is evidence, in the wide spread traces of copper ores, of a slight amount of impregnation in certain country rocks, the schists of the former, and the conglomerates and slates of the latter, for instance. Where the copper occurs in this disseminated form, definite ore bodies or lodes are unlikely to be found except in regions of disturbance, or along lines of jointing or fissuring, in which percolating solutions could deposit copper salts leached from the impregnated country. In the absence of any defined channel it is doubtful whether following mere superficially stained country, from decomposition of small particles of native copper, or sulphide compounds of the metal, in the rock, will result in profitable developments at a depth.

The most that can be said of the recent finds at Albert Water-holes and Orange Plains, at the present time, is that they are prospecting ventures on which little labour has yet been bestowed, particularly in the latter case. However, in both instances it is reported that arrangements have been made for more adequate testing. Delay in opening up a new discovery is apt to be construed as want of confidence, or as a desire to sell.

The Government Geologist.

I have, &c.,  
JOSEPH E. CARNE,  
Geological Surveyor.

## APPENDIX 23.

## Progress Report by Mr. J. B. Jaquet, Geological Surveyor.

Sir,

Geological Survey Branch, Department of Mines,

New South Wales, 7 January, 1900.

I have the honor to hand you my progress report for the year 1899.

At the commencement of the year I was engaged in the Goulburn District with Mr. L. F. Harper, Field Assistant, mapping various ironstone deposits. Upon 13th January we left for Mittagong, and were mostly occupied in the vicinity of this town until 16th March.

During these two months we sampled and mapped the ironstone deposits in the vicinity of Mittagong, Berrima, and Moss Vale. We also made a detailed Geological Survey of the country in the vicinity of Mittagong, showing the iron deposits and coal seams. This map has been published. It will form one of the maps which will accompany the memoir upon the iron ores of the Colony.

I was occupied from the 6th until the 11th February inspecting land near Micalong swamp in connection with applications for special Gold Leases.

I arrived back in Sydney from Mittagong upon 16th March and left again for Wingello upon 19th March. Upon my return to town I furnished you with a report stating the discovery of Bauxite near Wingello. This report forms Appendix

Between the 7th and 14th April I was engaged inspecting land at various places in the Southern District in connection with proposals to alter the Gold-field Reserves.

From the 25th April until 11th May I was occupied with Mr. Harper in making a geological examination of the Bauxite and aluminous iron deposits at Wingello. Upon our return to town we prepared a geological sketch map showing the extent and mode of occurrence of these ores. This map is now in the hands of the Government Printer. It will be published shortly.

Upon the 21st May I visited Goulburn and made an examination of the deposits of pottery clay at Boxer's Creek. My report upon these clays forms Appendix

After leaving Goulburn I visited Wyalong and Yalgogrin in connection with a proposal to resume certain land for gold-mining.

Upon 31st May I joined Mr. Harper at Bulli. We were occupied until 15th June sampling and mapping various ironstone deposits in the South Coast District. Upon 18th June I left Sydney for Gundagai for the purpose of inspecting certain gold-field reserves. I afterwards proceeded to Wagga Wagga and Little Billabong. I next visited Yalwal in connection with an application for a gold-dredging lease covering Yalwal Creek. During June I accompanied the Hon. Joseph Cook, Minister for Mines, and party, upon a visit of inspection to Mr. Garland's dredge upon the Macquarie River.

Upon the 2nd July I left Sydney for Tamworth in connection with proposals to alter the Nundle gold-field reserves. I afterwards joined Mr. Harper at Clarence Town. We were engaged in the field until the 2nd September upon the geological map of the country in the vicinity of the Williams and Karnah Rivers, north of Port Stephens. This map shows the extent and mode of occurrence of the beds of magnetic ironstone. It embraces an area of carboniferous rocks which are interesting from a scientific point of view on account of the numerous sheets of volcanic rock which are interstratified with them.

Between the 11th and 23rd September I was engaged in the Southern District inspecting various gold-field reserves. I also afterwards visited the South Coast in connection with similar work.

Upon 16th October I left Sydney for Wallerawang. I was engaged between this date and the 18th December sampling and mapping the ironstone deposits in the Wallerawang, Rylstone, Mudgee, and Gulgong Districts, and also in making many inspections in connection with applications to curtail various gold-field reserves. I also inspected the boring operations which are being carried out upon the ironstone deposits at Mittagong. During the year I contributed one paper to the Records of the Geological Survey.—“Notes upon the occurrence of gold in volcanic glass at Grassy Gully near Yalwal.” It will be published in the next issue of this publication.

Mr. L. F. Harper has continued to assist me in the geological survey of the ironstone deposits, and I again desire to express my satisfaction at the way he has carried out the work which has been entrusted to him.

The Government Geologist.

I have, &amp;c.,

J. B. JAQUET.

## APPENDIX 24.

## Discovery of Bauxite at Wingello.

Sir,

Geological Survey, Department of Mines, 24 March, 1899.

I have the honor to report to you the discovery of Bauxite near Wingello, county of Camden, upon the southern railway line.

Bauxite is a hydrated oxide of aluminium. It is practically the only ore used in the arts for the manufacture of aluminium at the present time, having taken the place formerly occupied by cryolite. The ore invariably has a certain quantity of iron associated with it, and this metal is often present in sufficient quantity to cause it to be of value as iron ore. In addition to iron, variable quantities of silica and titanitic acid are nearly always found as impurities. Deposits of Bauxite have been discovered in the United States of America, Ireland, France, and Germany, and are being extensively worked as an ore of alumina.

Mr. L. F. Harper and myself, while engaged in making a geological examination of the iron ores in the southern district of the Colony, have had our attention from time to time directed to vast superficial deposits of pisolitic brown iron ore. The ore consisted of a number of concretionary globules more or less tightly cemented together, which vary in diameter from a small fraction of an inch to half an inch. Sometimes it possessed what might be described as a pseudo-pisolitic structure, the individuality of the grains not

not being distinct. The quantity of iron present in the ore varies considerably. This is apparent to anyone, who, while handling the ores notices how they differ from one another as regards weight and colour. We directed our attention more particularly to those ores which appeared to contain the largest quantity of ferric oxide, and which seemed likely to be of value as iron ores.

A sample of the ore from near Wingello was submitted to Mr. J. C. H. Mingaye, Analyst to the Mines Department, for partial analysis, and he reported upon it as follows:—

Fe .....	25.09 per cent.
SO <sub>2</sub> .....	3.05 „
Gangue .....	6.00 „
H <sub>2</sub> O .....	22.00 „

The balance is mainly alumina. The results of this analysis a comparison of specimens of the ore with Bauxite obtained from Georgia, France, and Ireland, and a consideration of the mode of occurrence of the ore have made me of opinion that it is a ferruginous Bauxite.

Since receiving the results of the analysis quoted I have again visited Wingello. I find that variously tinted Bauxite ores occur in enormous quantities. Some of these ores contain only a small quantity of iron oxide. I have satisfied myself that these ores contain free alumina by rude qualitative tests, but shall be unable to give any particulars as to the amount of alumina present until these ores have been analysed by Mr. Mingaye.

The more ferruginous varieties of the ores may prove to be valuable iron ores, and on this account alone deserve a detailed geological examination.

I am not in a position at present to speak definitely as to the origin of the ores; there is some evidence to show that it may have resulted from the decomposition of a basaltic rock in situ. In the vicinity of Mittagong we found iron ores, which contain a considerable amount of alumina, and which in some respects resemble the ferruginous Bauxites of Wingello, passing by insensible gradations into basalt. The Bauxite deposits of Germany are said to result from the alteration of basalt. In his memoir upon the Vegetable Creek Tin-mining field, Professor T. W. E. David, under the heading "Laterite," says:—"This formation has a superficial area of 11 square miles 577 acres, and a thickness from a few feet to 40 feet. These beds consist at the surface of a red dusty soil passing downward into red yellow or grey tuffs and compact pisolitic ironstone which in their turn graduate into rotten spongy basalt."

My colleague, Mr. J. E. Carne, informs me that when examining the American Bauxite ores at the Chicago Exhibition he noticed that they resembled the Laterite from Emmaville, and he made a note suggesting that the Laterite would probably yield Bauxite. I am not aware of Bauxite having been previously described as occurring in this Colony.

The demand for aluminium has enormously increased during the last few years consequent upon the introduction of a cheaper method of production. In 1886 aluminium cost £2 10s. per lb., and the production in the United States of America did not exceed 3,000 lb. (a). In 1897 the metal could be obtained for 1s. 4½d. per lb., and the same country produced 4,000,000 lb. from Bauxite ore.

The process now in vogue is an electrolytic one, and the largest item in the cost of production is power. Numerous waterfalls tumble over the edges of the southern table-land upon which the Bauxite occurs, and in the event of reduction works being started these would be available as a cheap source of power.

I propose that I should supplement this preliminary notice with a detailed report giving exact particulars as to the extent, quality, and mode of occurrence of the ore.

JOHN B. JAQUET,  
Geological Surveyor.

[Plan.]

In the above report Mr. J. B. Jaquet records the fact that a mineral which occurs in large quantities in the Wingello District (between Moss Vale and Goulburn), and which was hitherto supposed to be iron ore is in reality Bauxite.

During a recent visit to Inverell I collected samples which, on analysis, have also proved to be the same mineral. It is very widely distributed in this district, and also near Emmaville, and occurs in the form of beds of volcanic ashes, which, as a rule, occupy the tops of the hills. The ore is at present largely used around Inverell for road-making, for which purpose it answers admirably. The presence of this volcanic ash was first noted by the late Rev. W. B. Clarke, in a report dated 7th May, 1853, on the "Geological structure of the western slopes of the highlands of New England," and subsequently in 1885, about 12 square miles of it were mapped by Professor David during his geological examination of the Emmaville district. The interesting competition of these volcanic ashes has, however, only just come to light.

The mineral Bauxite is the source from which all the aluminium of commerce is produced, and in view of the rapidly increasing use of this exceedingly light and valuable metal in the arts, the fact that very large deposits of Bauxite, of a quality suitable for its manufacture, exist in widely separated portions of the Colony, is of very considerable importance.

E. F. PITTMAN,  
Government Geologist.

12 April, 1899.

Appendix to Report upon Bauxite at Wingello.

In the above report I mentioned having revisited Wingello with a view of searching for the purer and non-ferruginous varieties of Bauxite. I have now received the result of the analysis of three varieties of ore which I obtained, by Mr. H. P. White, Assistant Analyst to the Mines Department. The analyses are as follows :—

	A.	B.	C.
Total water .....	32·68 per cent.	17·81 per cent.	22·30 per cent.
Ferric oxide .....	2·85 „	12·90 „	20·34 „
Alumina .....	58·31 „	35·28 „	39·82 „
Titanic acid .....	2·40 „	2·65 „	5·50 „
Silica .....	1·80 „	29·80 „	10·30 „
Phosphoric acid .....	·66 „	·19 „	·56 „

Sample A will compare favourably with the ore now being mined for the purpose of manufacturing aluminium elsewhere in the world. I append analyses of foreign ores for the purpose of comparison. J. C. Branner, Ph.D., State Geologist of Arkansas, U.S.A., states that the Bauxite ore of Arkansas varies in composition as follows :—

Alumina .....	51·9 to 62·05 per cent.
Ferric oxide .....	1·3 „ 19·4 „
Silica .....	2·0 „ 33·9 „

Also, that the average composition of fourteen samples of Bauxite collected from France, Ireland and Austria is as follows :—

Alumina .....	52·7 per cent.
Silica .....	7·0 „
Ferric oxide .....	19·0 „
Water .....	16·4 „

Mr. G. Warnford Lock states that the Bauxite ore raised from the mines of the Irish Hill Company in Ireland yields 44·54 per cent. of alumina, and 1·15 per cent. of iron. Also that the ore mined in Cherokee County, U.S.A., “as per car-load sample,” contains :—

Alumina .....	56 to 60 per cent.
Ferric oxide .....	2·75 „
Insol. siliceous matter .....	0·7 „
Titanic acid .....	2 to 3 „
Water .....	25 „ 30 „

7 April, 1899.

J. B. JAQUET.

APPENDIX 25.

Report upon Clay deposits at Boxer's Creek, near Goulburn.

Geological Survey, Department of Mines, New South Wales, 22 June, 1899.

Sir,

I have the honor to inform you that, in accordance with your instructions, I have inspected the deposits of white clay occurring at Boxer's Creek (also called Shaw's or Hogue's Creek), parish of Towrang, about 5 miles from Goulburn, in an easterly direction.

The formations consist of Siluro-Devonian slates, shales and limestones. Interstratified with the slates are bands of a rock which is rich in felspar. My investigations are not sufficient to enable me to speak definitely as to the mode of origin of this rock. I am inclined, however, to think that it is sedimentary, and is composed of material derived from the degradation of granite. It contains numerous grains of felspar undergoing kaolinisation, and for practical purposes may perhaps be looked upon as a partially decomposed granite. Mr. W. A. Oakley has suggested that this rock closely resembles the “Petunze” of the Potter, a material used in the manufacture of porcelain, and consisting of a weathered felspathic rock.

Ideal section across Boxer's Creek, showing mode of occurrence of White Clays.

The white clays, which it is proposed to use in the manufacture of pottery, consist of the upper and weathered portions of shaly slates. Where these rocks are exposed at the surface the soft clays resulting from their decomposition are denuded rapidly away, but where they are protected by overlying alluvial deposits, as is the case under the flats which border upon Boxer's Creek, the clays remain in situ. Planes of parting which represent the original bedding and cleavage planes of the parent rock can be distinguished in the clays.

The

The bulk of the clays has undoubtedly been derived from the slates, but it is possible that further prospecting may show that the weathered portions of the bands of felspathic rock, which I have already mentioned are interstratified with the slates, may yield a product which, after dressing, may approximate to the kaolin clays of commerce. At the present time no extensive deposit of felspathic clays has been exposed.

Analyses of samples of the white clay have been made by Mr. J. C. H. Mingaye, Analyst to the Mines Department, as under :—

	I.	II.	III.	IV.	Washed kaolin from Cornwall. V.
Mois. at 100 deg. C. ....	·67	·70	·39	·33	} 13·03
Combd. H (²) O .....	2·97	4·10	2·49	2·73	
S O (²) .....	79·54	75·08	78·82	75·98	
Al (²) O (²) .....	12·53	15·17	13·27	15·18	
Fe (²) O (²) .....	1·26	1·61	1·53	1·37	} 39·60
Mn O .....	trace	trace	trace	trace	
Ca O .....	·34	·35	·26	·07	
Mg O .....	·61	·10	·50	·65	
K (²) O .....	1·82	1·32	2·93	3·59	} ·10
Na (²) O .....	·50	1·20	·03	·25	
P (²) O (²) .....	·02	·03	·06	trace	
S O (²) .....	·04	·06	trace	absent	
	100·30	99·62	100·28	100·15	99·54

The last analysis V is of a sample of washed kaolin from Cornwall, extracted from the paper of Mr. J. H. Collins, on "The Nature and Origin of Clays," Min. Mag., 1887. It is appended for comparison, and would seem to show that the Goulburn white clays do not resemble kaolin, while having regard to their physical composition and mode of origin I think it doubtful whether the silica percentage could be greatly reduced by levigation. The Goulburn clays, judging by their analysis, more closely resemble the refractory clays used in the manufacture of firebricks. In this connection it should be remembered that the ultimate analysis of a clay, while yielding information of much value, is not sufficient to enable one to express an opinion as to its utility in the arts. Two clays, totally dissimilar in physical composition, and giving totally different results in the hands of the potter, may be found to contain approximately the same percentage of, say, alumina. Yet in one of them the bulk of this constituent may be present in the form of clayey substance or kaolinite and in the other in the form of undecomposed felspar. To get a more useful result the ultimate analysis is often supplemented by a "rational analysis" in which the percentage of clayey material free quartz and felspar is determined.

The commercial value of the Goulburn clays can only be settled after a series of exhaustive experiments have been made by a practical potter: I am not competent to express any opinion upon this subject. I am confident, however, that the deposits are of enormous extent, and that in the event of the clays being utilised in the manufacture of firebricks or pottery there need be no apprehension as to the supply of raw material becoming exhausted.

I desire to express my thanks to Mr. W. A. Oakley for accompanying me to Goulburn, and otherwise assisting me.

I have, &c.,  
JOHN B. JAQUET,  
Geological Surveyor.

The Government Geologist.

APPENDIX 26.

Report on Ironstone, Parish Falnash.

Sir,  
Rylstone, New South Wales, 17 November, 1899.  
I have the honor, in accordance with your instructions, to forward you a preliminary report upon the ironstone deposits in the parish of Falnash, near Piper's Flat.  
A sum of money has been granted from the Prospecting Vote for the purpose of testing these deposits, and two contracts for shaft-sinking have been let. The shafts are being sunk upon the sites which you selected.

Deposit.	Position.	Contractor for Shaft.	Character of Ore body.
No. 1 .....	Portion 150, Parish Falnash ...	M. Nolan.....	Magnetic iron ore.
No. 2 .....	„ 155, „ ...	E. C. Connolly .....	Brown iron ore.

*Deposit No. 1* consists of a mass of garnet rock. Some of this rock contains magnetic oxide of iron in the form of small veins and pockets, while in one place (near the site of the old shaft in the open cut) there is a body of magnetite exposed which is 4 feet wide by 4 feet high. Much of the garnet rock is altogether devoid of magnetite, and in most places where this mineral occurs it would seem to be present in insignificant quantities.

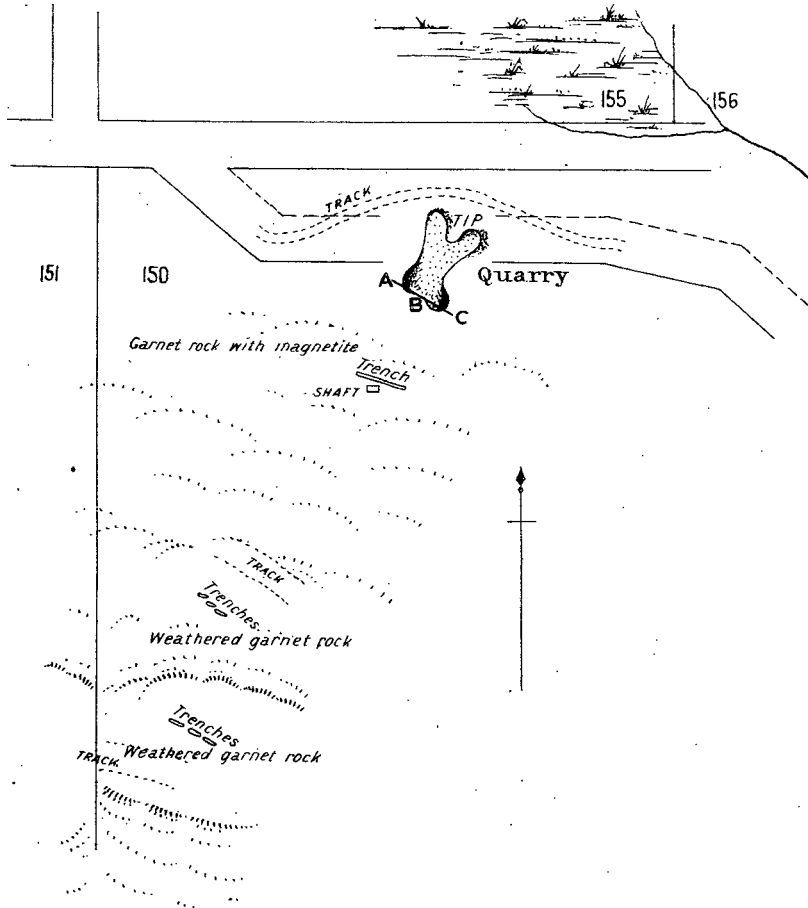

The garnet rock is associated with silicified slates of Devonian age. We found outcrops of the rock alternating with outcrops of slate over an area about 12 chains long by 1½ chain wide, the general trend of the outcrops being N.E. and S.W. As seen in the exposed face of the quarry, the garnet rock occurs in three

# Ironstone deposits

Photo-lithographed by  
W. A. Gullick, Government Printer,  
Sydney, N.S.W.

three distinct bodies, which are separated from one another by bands of slate. The bands of rock appear to be conformable with the bedding planes of the slates. An intrusive mass of granite occurs in the vicinity of the ore deposit (*vide* geological map of Wallerawang district by the late Government Geologist, Mr. C. S. Wilkinson).

Many years ago a quarry was opened out upon the ore body near the northern end of the portion, and several tons of ore raised and stacked. This ore is mostly garnet rock; the greater portion of it contains only a small quantity of magnetite. In the face of the quarry a body of good magnetite ore 4 feet wide has been exposed. A shaft was sunk in the floor of the quarry upon this ore, and I am informed by Mr. David Lawson, of Irondale, that this ore pinched out at a depth of 23 feet (about 10 feet below the floor of the quarry).

The shaft which is being sunk by Mr. M. Nolan, the contractor, has now reached a depth of 40 feet. The sinking has been through hard silicified slates and fine grained quartzites, with patches of garnet rock. In the costeaning trench immediately north of the shaft the garnet rock has magnetite associated with it; but the rock in the shaft, from a few feet below the surface downwards, is altogether devoid of, or only contains the barest traces of this mineral.

I beg to recommend that the sinking of the shaft be discontinued, and that no more money be expended in prospecting this particular deposit.

On account of the high percentage of iron and its fusibility the garnet rock might, perhaps, be mixed with other ores and smelted.

Another circumstance which causes me to doubt the existence of any large body of magnetite in this locality is the small influence which it exercises over the compass needle. In order to prepare the attached plan we traversed over the deposit with a circumferenter, and with a view of eliminating errors due to local magnetic attractions we noted both fore and back sights. We did not find that the local magnetic attraction was great; the maximum deflection from the meridian observed was 3°. Elsewhere in the Colony, when approaching a large body of magnetite, the needle has tilted from its horizontal position, and it has been impossible to use a circumferenter at all. In the United States of America the dipping needle has been most successfully employed in prospecting for bodies of magnetic iron ore, and this instrument might perhaps be used with advantage in some places in this Colony.

*Deposit No. 2.*—This deposit consists of an irregular-shaped mass of brown iron ore, occurring in Devonian slates.

The contractor, Mr. F. M. Connolly, has sunk the shaft to a depth of 51 feet.  
Particulars of the rock encountered are given below :—

A. Brown iron ore .....	18 feet.
Decomposed soft white slate .....	12 „
B. Brown iron ore .....	2 „
Decomposed slates, with occasional segregations of brown iron ore .....	19 „
	—
	51 feet.

Samples from “A” and “B,” have been taken, but have not yet been assayed.  
I beg to recommend that the sinking of this shaft be continued.

I have, &c.,  
J. B. JAQUET,  
Geological Surveyor.

The Government Geologist.

APPENDIX 27.

Report on Boring, Fitzroy Iron Deposit.

Geological Survey Branch, Department of Mines,  
New South Wales, 22 November, 1899.

Sir,

I have the honor to hand you, in accordance with your instructions, a progress report upon the prospecting operations which are being carried out upon the Fitzroy iron deposit near Mittagong.

One borehole has been carried to a depth of 38 feet near the eastern end of the deposit. The strata encountered has been as under —

Surface to 14 ft. 6 in. ... ..	Brown iron ore.
14 ft. 6 in. to 38 ft. ... ..	Hawkesbury sandstone.

In my opinion there is no necessity to put down a borehole at the site named by Mr. Larkin, which is distant only 30 feet from the borehole just completed.

I have given the foreman of the drill plant instructions to shift the plant and commence drilling upon the second site which you selected near the centre of the deposit. I have also given him instructions to cease boring immediately he passes out of the ironstone and enters the sandstone.

I beg to suggest that after the second borehole is completed, two more holes be drilled upon sites which I have selected to the west of the Chalybeate Spring house. In the absence of instructions to the contrary I have given the foreman instructions to proceed with these additional boreholes.

With the aid of the information gained from these four boreholes, and the survey which we have made, I should be able to estimate with tolerable accuracy the number of tons of ore contained in the ore-deposit.

I have, &c.,  
J. B. JAQUET,  
Geological Surveyor.

## APPENDIX 28.

## Report on Boring, Mittagong.

Geological Survey, Department of Mines,

Sydney, 5 January, 1900.

Sir,

I have the honor to inform you that I inspected the boring operations which are being carried out at Mittagong upon the 2nd instant.

No. 3 bore after passing through 6 feet of compact brown iron ore encountered loose sand. I instructed the foreman in charge of the drill to continue boring a few feet through the sand in the hope that a solid core might be obtained. As no solid rock has yet been met with, I beg to recommend that boring upon site No. 3 be discontinued, and that the drill be shifted to site No. 4 which I have already pointed out to the foreman, Mr. W. Symonds. No. 4 is the last site for a borehole upon the Fitzroy deposit.

I have, &amp;c.,

J. B. JAQUET.

## APPENDIX 29.

## Progress Report by Mr. E. C. Andrews, Geological Surveyor.

Sir,

I have the honor to furnish you with the following report of the work done by me since my appointment in July last.

On 1st July I commenced my duties, and from that date till the 6th of the same month was employed in making myself acquainted with matters pertaining to this office.

On 6th July I accompanied Mr. Geological-Surveyor Carne to Wellington, to understand the methods employed in reserving or alienating lands, &c. During this trip we visited Bodangora, Orange, Peak Hill, Parkes, Young, Greenbank, Grenfell, Mandurama, Cow Flat, Rockley, and Sewell's Creek.

From the 24th to the 27th July I was employed in the office.

On 27th July I accompanied you to Shorter's Hill, to examine a supposed rich gold find at that locality.

Orange, Lucknow, and Ophir were also visited, and the gradual passage into serpentine of the augite-andesite rock from that locality was examined.

From the 2nd to the 7th August, I was employed in the office collecting material and information relating to the Hillgrove area.

On the 7th and 8th August, I visited Unanderra to consult Mr. Geological-Surveyor Watt concerning matters relating to the Hillgrove gold-field.

On the 9th August, Mr. M. Morrisson, Field Assistant, accompanied me to Hillgrove. The object of the visit was to complete the partially finished geological map of Mr. Geological-Surveyor Watt; to prepare a report on the Hillgrove District, embodying the history of the mines; a brief discussion on the topography and geology of the field, which same includes petrological notes on some rocks found on the field; to estimate the dips and strikes of the derivative rocks; of the lodes and of the dykes; to prepare a general section of the gold-field; and to note any other items of economic or geological interest in the district. The work was completed on the 21st November, and the results will be embodied in a separate pamphlet belonging to the "Mineral Resources" series. Photos illustrating various points of interest were also secured by me for insertion in the Annual Report of the Department of Mines, and the report on the Hillgrove gold-field.

From the 4th to 11th October I was absent at Wilson's Downfall, Pye's Creek, and the Mole River, dealing with lands papers.

On the 21st November I left Hillgrove for the north and visited that part of the Orara gold-field known as the Newton Boyd and Broadmeadows holdings.

I was engaged from the 27th November till the 15th December in writing up the report of the Hillgrove gold-field.

Between the 15th and 25th December I was engaged examining portions of land at the Nine-mile, and also in securing fresh details for the Hillgrove report.

Since then till the end of the year I have been engaged in writing reports.

I have, &amp;c.,

E. C. ANDREWS,

Geological Surveyor.

The Government Geologist.

## Annual Report of the Curator and Mineralogist.

Sir,

I have the honor to present the following Progress Report for the past year.

The year has been marked by a severe pressure of routine work. In consequence of this, and of the changes in the personnel of the office staff, the official hours have been insufficient to keep pace even with the current work, and no opportunities whatever have offered themselves for the improvement of the museum, or for connected mineralogical and petrographical investigations.

*Examination of Ores, &c.*—The number of specimens submitted by the public has been greater than in any previous year, except 1896. Of these, 5,260 have been sent to the Government Metallurgist to be assayed. The numbers of samples so selected for the previous five years are here given for comparison :—

1894	...	...	3,816	1897	...	...	5,131
1895	...	...	4,826	1898	...	...	4,428
1896	...	...	6,012	1899	...	...	5,260

Moreover, the amount of office work involved in dealing with a given number of samples is greater than formerly, as fuller information involving the determination of several metals or compounds is now frequently necessary.

*Gold.*—The Bushy Hill (Cooma) Field alone calls for comment. Numerous samples of rich ore have been received from different portions of the field, an examination of which shows that the deposit consists of a crushed quartz-porphry, rendered schistose by pressure, and impregnated with auriferous sulphides. As it had been regarded a likely district for the occurrence of tellurides of gold, the Assayer has been asked on one or two occasions to make a special examination for tellurium, but up to the present it has not been detected. Telluride of gold has, however, been detected in minute quantities at the Prince of Wales Mine, Gundagai.

*Silver.*—Prospectors in the Rockvale (Armidale) district still continue to come across ruby silver in splashes; but no further notable discoveries appear to have been made. At the new silver-field of the Peaks, Burragorang, a clay-like richly argentiferous ore was found (in the Assay Laboratory) to contain chloride of silver. Specimens from this field showing native silver have also been presented to the Mining Museum.

The enhanced value of copper, zinc, tin, arsenic, and tungstic acid has led to much activity in prospecting for ores containing them, and a feature of the year's work has been the great number of supposed copper ores sent in. No new deposits of zinc, arsenic, wolfram, or scheelite appear to have been discovered.

The discovery of bauxite along the southern line and in the Emmaville District has excited interest in aluminium and its ores. Of the samples submitted a few have proved to be ferruginous bauxites, others were merely clays. It is frequently extremely difficult or impossible to distinguish a bauxite ore from clay. Some demand now exists for manganese ores suitable for the preparation of chlorine, for which purpose a high percentage of binocide is required. As many of the black oxide ores of the Colony are found to contain a considerable percentage of the protoxide of manganese, which is valueless in this case, a number of samples have been sent to the Assayer for a direct determination of the amount of binocide present. The smelting works at Cockle Creek and Dapto are now consuming a considerable quantity of ironstone-flux. To avoid heavy freight charges, it is necessary that the flux should be procured at points convenient for cheap transit. In consequence, highly ferruginous patches within the Hawkesbury Sandstone area at Carlingford (Epping), Gosford, George's River, and elsewhere have been investigated. While some good specimens have been submitted, much of the material, as might be expected, proved to be ferruginous sandstone containing far too much silica in the form of quartz-sand to be of any use.

The results of a number of assays likely to be of general interest will be found tabulated in an Appendix.

What appears to be a mineral hitherto undescribed, a sulphide of bismuth and lead, has been discovered near Duckmaloi Creek. It is rich in bismuth, and sometimes contains gold or silver, or both. Analyses will be found on page 192.

The number of letters written has been nearly 4,000.

*The Museum.*—425 specimens have been registered, and donations received from fifty-nine persons.

The following are the principal additions made :—

Numerous copper ores with their country rock (some from abandoned mines, and therefore difficult to procure); collected by Mr. Carne.

Foraminiferal rocks from New Caledonia.

Monazite in the matrix from New England.

Wolfram crystals from Torrington, New England.

Telluride of gold, with specimens showing its mode of occurrence at Cripple Creek.

A series of carefully selected specimens, from the Wentworth Proprietary Mine, specially collected by Mr. W. Lock.

A series of rock specimens representing the stratigraphy of the Narrabeen Beds, collected by the manager, Mr. Rae, at frequent intervals during the sinking of the Balmain shaft,

A crystal of native platinum from the Fifield diggings.

The re-opening of the Lunatic Reefs has afforded an opportunity of procuring a supply of native arsenic.

It has been a great disappointment to me not to have been able to make progress with the preparation of descriptive labels and other efforts to make the museum collections of greater interest and value. It had also been hoped to make substantial progress towards the completion of a popular guide book; but after getting a few notes together, the attempt had to be abandoned. If possible it will be taken in hand in the ensuing year. The arrangement in the show cases and labelling of a suitable selection of New South Wales rocks should also be carried out with as little delay as possible. In addition to the reasons stated above, museum work has been delayed by the unusual number of collections prepared. There have been twenty-four of these, comprising some 4,000 specimens. These are carefully prepared, and in good hands would be of great service, but it is much to be feared the request for them is sometimes prompted only by the fact of a neighbouring township having received one or some similar reason.

Fifteen enlarged photographs of geological and mining interest have been framed and a number of maps mounted for hanging on the walls. The enlargements have attracted much notice, and greatly improve the appearance of the museum. The collection of geological photographs now comprises 200 prints and 275 lantern slides.

The opening on Public holidays continues to be much appreciated, the attendance of country visitors on those occasions being very great.

A list of the donations received, and of the collections distributed, will be found in appendices.

*Petrological Work.*—700 additional rock specimens and more than 200 thin sections have been registered, many of which have been briefly reported on by myself. There has been no opportunity for detailed work. The rock collection now comprises some 4,000 specimens, 1,700 of which have been sectioned. Some important localities are entirely unrepresented, more especially those in which mining operations are not carried on. I think there is now enough material to justify the commencement of a systematic classification of the information available. Among the determinations made may be instanced the following :—

The country rocks of a number of copper mines.

Rocks from Yulgilbar Cinnabar Mines.

„ Lyndhurst Gold-field.

„ Burragorang Silver-mines.

„ Hillgrove Gold-field.

*Staff.*—On the transference of Mr. Morrison to the Field Staff, after many years service in this office, and the resignation of Mr. Dobson after prolonged ill-health, Messrs. C. O. G. Larcombe and W. G. Stone were appointed as cadets to fill the vacancies. Both officers are giving every satisfaction. On the resignation of J. Kinnerk, watchman, J. Reilly was appointed for three months on trial.

I have, &c.,

GEORGE W. CARD.

APPENDIX.  
DONATIONS to the Mining and Geological Museum.

Donor.	Donation.
Andrews, E. C. ....	Glacially striated pebble.
Barling, J. ....	Travertine.
Bensusan, A. J. ....	Rock specimens, pyrrargyrite, auriferous slate, cobalt ore.
Bensusan, S. L. ....	New England diamonds.
Binnie, H. ....	Galena with native silver.

A specimen of this rock was polished, but the result was not very satisfactory.

## 2764.—Anthracite occurring in association with quartz, Parkes.

Hydroscopic moisture.....	6.84
Volatile hydrocarbons.....	8.12
Fixed carbon.....	77.74
Ash.....	7.30

100.00

Ash—Reddish tinge granular.

Water.

915—Water from a well at Polly Brewan Station, Walgett.

Analysis.

The water on evaporation yielded 1,266·6 grains per gallon, or 1·8 per cent. of total solid matter, which consists mainly of soda, magnesia, and lime, combined with chlorine and sulphuric acid. The water contained a large amount of suspended matter, and gave off a strong odour of sulphuretted hydrogen on uncorking the bottle.

The water should not be used for watering stock, as it is a strong medicinal water, which will act as a purgative on stock continually partaking of it, there being a large amount of magnesia and soda salts present.

2845—Water from a well on Moira Station on the reserve north of the Sandhills, parish Banna, county Cadell, at a depth of 8 feet.

	Grs. per gallon.	In 1,000 parts.
Total solid matter (dried at 220° F.) .....	11·900	0·1700
Chlorine (combined) .....	1·814	·0259
Sulphuric acid (combined) .....	absent	absent
Free ammonia.....	0·040 parts per 100,000 parts	
Albuminoid ammonia..	·013 „	„
Oxygen absorbed in 15 min. at 80° F.....	·104 „	„
Oxygen absorbed in 4 hrs. at 80° F. ....	·112 „	„

Nitrogen as nitrates ; good reaction given.

Poisonous metals absent.

The total solid matter consists of soda, lime, and magnesia, combined with chlorine and carbonic acid. There is also present silica, organic matter, and nitrates.

The sample sent was rather small ; therefore the analysis of the total solid matter, and the determination of the nitrogen as nitrates and nitrites, could not be attempted.

The amount of free and albuminoid ammonia found in the water is excessive, showing pollution from some source.

It is not a good water for human consumption in its present state, and the water should be well boiled before use.

2870—Water from a well on Moira Station.

Analysis.

Samples taken from well on H. C. Hambling's homestead selection south of the Sandhills, and about 500 yards from No. 1 well ; parish Banna, county Cadell. Depth of well, 70 feet.

	Grs. per gallon.	In 1,000 parts.
Total solid matter (dried at 220° F.) .....	638·40	9·120
Soluble saline matter ..	636·34	9·090
Insoluble mineral matter .....	2·06	·030
	638·40	9·120

The soluble saline matter consists mainly of soda, with a lesser amount of magnesia, &c., combined with chlorine and sulphuric acid ; the “insoluble,” of carbonates of lime and magnesia, silica, &c. The large amount of saline matter present in the water renders it totally unfit for human consumption, and it is a bad water for stock. The large amount of soda and magnesia salts will tend to produce a purging effect on stock partaking of much of this water.

5243—Water from Yellow Mountain.

Analysis.

The water contains very small quantities of sodium chloride, magnesium sulphate, calcium sulphate, and calcium carbonate.

There is also a fair quantity of soluble organic matter present, but boiling would destroy this, and render the water suitable for human consumption.

Clays, &c.

3233—Felspathic material, Tenterfield.

Chemical composition.

Moisture at 100° C. ....	14·95

#### APPENDIX 31.

### Annual Report of the Palæontologist for 1899.

Sir,

Geological Survey Branch,

Department of Mines and Agriculture, 2 January, 1900.

I have the honor to submit to you the following summary of the palæontological work, and work connected with the departmental library, performed during the past year.

*Publications.*—Records, Vol. VI, pts. 2 and 3, have been published. Memoir, Ethnology Series, No. 1, by Mr. W. D. Campbell, on "The Aboriginal Carvings of Port Jackson and Broken Bay," has been issued. Nos. 5 and 6 of the Mineral Resources have been published, and also a second edition of No. 3 of the same series.

#### Miscellaneous Determinations.

1. Palæoniscid fish from Gentle's Brick Works, St. Peter's; presented by Mr. E. Williams. These have been transmitted to Mr. A. Smith Woodward, of the British Museum, who is describing this fauna.
2. Diatomaceous Earth (*Melosir granulata*), from Wyrallah, Richmond River, with leaves resembling *Eucalyptus Mitchellii*, Ett., and *Premna Drummondii*, Ett.; presented by Mr. T. McDonagh.
3. From the Southern District; collected by Messrs. J. B. Jaquet and L. F. Harper:—
  - (a) From Frazer's Farm, Portion 29, Parish Jellore, County Camden.—Indeterminable Tertiary leaves, *Banksia*, cf. *Hovelli*, Ett., in ironstone under basalt.
  - (b) From above kerosene shale, Joadja.—*Glossopteris Browniana*, Brong., and *Phyllothea*.
  - (c) From Fitzroy Iron Co.'s Workings, Nattai.—*Glossopteris*, sp. ind.
  - (d) From Nattai River, below The Gap Creek, Parish Jellore, County Camden.—*Martiniopsis subradiata*, G. Sby.; *Spirifera convoluta*, De Kon.; *S.*, sp. ind.; *Tribrachiocrinus*, part of calyx.
  - (e) From Loseby's Farm, Portion 49, Parish Mittagong, in ironstone under basalt.—*Quercus*, cf. *Hartogi*, Ett.
4. Carboniferous fossils collected by Mr. J. B. Watt, Geological Surveyor, at Sawpit Gully; very imperfect.—Sponge spicules, *Zaphrentis*, *Fenestella*, *Productus*, *Spirifera*, *Mourlonia* (?).
5. *Eucalyptus* leaves from prospecting shaft, Corang, collected by Mr. P. J. Galway, Warden's Clerk.
6. From near Nowra, *Hyolithes lanceolatus*, Morris; presented by Mr. M. McHatton.
7. From a depth of 2,150 feet, Warri Warri Bore—*Pseudavicula anomala*, Moore, and a small indeterminable bivalve.

8. From Portion 6, Parish Wilbertree, County Phillip—collected by Mr. J. E. Carne, Geological Surveyor—*Heliolites*, *Atrypa*, cf. *flabellata*, Goldfuss; *Rhynchonella*, *Spirifera*, *Orthis*? *Euomphalus*.
9. From Portion 86, Parish The Peaks, County Westmoreland—collected by Mr. O. Trickett, L.S.—*Mæonia carinata* Dana, *M.* sp., *Chaenomya*, *Pachydomus*, cf. *antiquatus*, Sky—Permo-Carboniferous. From Colong Caves—*Favosites gothlandica*, Fougé.—Silurian.
10. From the "Coolgardie Gold-mine," G.L. 14, Parish Clarendon, County Bathurst, at a depth of 150 feet, a number of specimens of *Diplograptus* were collected by Mr. R. H. Cabbage, Mining Surveyor. It is impossible, from these specimens, to say whether the slates are of Ordovician or Silurian age. Mr. Cabbage also collected at Jemalong, near Forbes, a dermal plate of an Asterolepid fish, apparently a new species, preserved as an impression in a coarse-grained Devonian sandstone.
11. From Crowdy Head, near Harrington, in beds considered to be of Carboniferous age,—a nearly complete Palæoniscid fish, together with indeterminate plant stems, were collected by Mr. John Rye.
12. Post-Tertiary bones from Cunningham Creek, Parish Beggan Beggan, County Harden, collected by Mr. B. Clayton—*Diprotodon australis*, Owen; *Thylacoleo carnifex*, Owen; *Phascolonus gigas-Sceparnodon Ramsayi*, Owen; *Phascalomys, Mitchellii*, Owen; *Macropus giganteus*, Zimmerman; *M. robustus*, Gould; *M.* sp. indet.
13. Fossils from the Maitland District, collected by Professor David—
  - (a) From portion 88, Parish Ellalong—*Zaphrentis*; *Protoretepora ampla*, Lonsdale; *Fenestella internata*, Lonsdale; *Protoretepora Konincki*, Eth. fil.; *Fenestella* sp.; *Spirifera Strzeleckii*, De Kon; *S. Stokesi*, König; *S.* sp. ind.; *Martiniopsis oviformis*, McCoy; *Strophalosia*; *Productus brachythærus*, G. Sby; *Aviculopecten tenuicollis*, Dana; *A. Fittoni*, Morris (?); *Merismopteria*, n. sp.
  - (b) From Ellalong, immediately below Saliferous Sandstone.—*Stenopora* (dendroid form); *Productus brachythærus*, G. Sky; *Spirifera*, sps. ind.; *Merismopteria*, n. sp.
  - (c) Ellalong, 1 mile north of.—*Stenopora tasmaniensis*, Lonsdale.
  - (d) Dunninger Paddock, Lochinvar.—*Fenestella internata*, Lonsdale; *Stenopora tasmaniensis*, Lonsdale; *Tribrachiocrinus* (?).
  - (e) Below Ravensfield Sandstone, West Maitland.—*Aviculopecten tenuicollis*, Dana; *Ptycomphalina morrisiana*, De Koninck.
  - (f) Half-mile north of Lochinvar Railway Station.—*Ptycomphalina morrisiana*, De Kon.; *Glossopteris*.
  - (g) Half mile north of Comerford's, West Maitland.—*Stenopora* (flabellate form); *Martiniopsis oviformis*, McCoy; *Aviculopecten lineiformis*, Morris; *Deltopecten illawarrensis*, Morris.
  - (h) Near south-east corner of Burns' 640 acres, Raymond Terrace.—*Productus brachythærus*, G. Sby.
  - (i) Milfield.—Crinoid stems, *Productus brachythærus*, G. Sby.
  - (j) Ravensfield.—*Edmondia* (?) *nobilissima*, De Koninck.
  - (k) Blair Duguid, West Maitland.—*Spirifera*, sp. ind.
  - (l) Erratic, Blair Duguid.—*Fenestella*, sp. ind.; Crinoid calyx.
  - (m) Near "Wilderness," Pokolbin to Branxton Road.—*Fenestella internata*, Lonsdale; *Stenopora*, n. sp.; *Ostracoda*.
  - (n) Ravensfield Sandstone, half mile west of East Greta Coal Mine.—*Conularia tenuistriata*, McCoy.
14. From New Road Cutting, Harper's Hill, in Lower Marine Tuffaceous Sandstone, collected by Mr. Cullen.—*Stenopora*, a new dendroid form allied to *S. tasmaniensis*, Lonsdale; Crinoid stem-ossicles; *Fenestella fossula*, Lonsdale; *Dielasma hastata*, J. de C. Sky.; *Martiniopsis subradiata*, G. Sby.; *Spirifera vespertilio*, G. Sby. (?); *S. Stokesi*, König; *S. tasmaniensis*, Morris; *Eurydesma cordata*, Morris; *E. sacculus*, McCoy (?); *Pachydomus antiquatus*, J. de C. Sby.; *P.*, n. sp.; *P.* (?); *Allorisma* (?) *curvatum*, Morris; *Pleurophorus*, sp. ind.; *Chaenomya*, sp. ind.; *Palæarca subarguta*, De Kon. (?); *Orthonota*, n. sp.; *Merismopteria macroptera*, Morris; *Aviculopecten lineiformis*, Morris (?); *A. tenuicollis*, Dana; *A. squamuliferus*, Morris.

#### Collections.

During the past year the Collector, Mr. C. Cullen, has collected largely in the Maitland, Tamworth, Manilla, Wingello, and Bundanoon districts. Advantage was taken of a new road cutting in the Lower Marine Sandstone at Harper's Hill, and many valuable specimens were added to the collection. A large collection of Tertiary leaves were collected from the ironstone beds at Wingello. These are now being examined by Mr. Henry Deane, M.A., F.L.S. From the Tamworth district a very large number of Devonian corals were collected. Their detailed examination will add many genera and species to the already rich coral fauna, described by Mr. Etheridge in *Records*, VI, Part 3. Some especially fine blocks of the large *Sanidophyllum Davidis*, Eth. fil., were obtained.

A considerable number of fossil plants (*Thinnfeldia odontopteroides*, Morris; *Thinn. narrabeenensis*, sp. nov.; *Alethopteris*, n. sp.; *Tæniopteris*, n. sp.; *Equisetum*, and a peculiar fructification (comparable to *Sphaereda* and *Beania*) were obtained from the shaft being sunk at Balmain by the Sydney Harbour Collieries Co., Ltd.

A number of type and figured specimens from the Devonian limestones have been tableted and labelled for the Museum. Wooden covers for the specimen trays are being made, and are found to be a great improvement, the specimens being kept much cleaner.

Fourteen collections of fossils for various institutions were prepared during the year, including two large exchange collections for the Natural History Museum, Paris, and the Kansas University, and a small collection of Devonian fossils for Mr. A. Dieseldorf, Freiburg.

Reports, &c.

During the year a considerable amount of my time was occupied in the preparation of (1) a Bibliography of Papers, &c., relating to the Economic Geology of New South Wales, which will shortly be sent to the Printer.

(2.) A list of papers relating to the Carboniferous and Permo-Carboniferous Geology and Palæontology of Australia is being prepared for Professor David's Memoir on that subject.

(3.) A considerable amount of work has been done in connection with the description of the flora of the Narrabeen beds, which is now nearing completion.

(4.) Several short papers on Devonian Bivalves and Upper Silurian Brachiopoda have been prepared, and will shortly be published in the *Records*.

Library.

During the year, 1,904 publications were registered and placed in the Departmental Library, consisting of Society Transactions, Reports of State Departments, serial and separate works and pamphlets. This total is made up of 1,672 volumes, or parts of volumes, that have been presented or sent in exchange, and 232 that have been purchased. The Library is now in correspondence with 225 institutions and State Departments, from which exchanges are regularly received, and there are also numerous personal exchanges (192 individuals are on the list).

The principal additions to the exchange list are :—

- New Zealand Institute of Mining Engineers.
- Augustana College, Rock Island, U.S.A.
- K. Ungarischen Geologischen Austalt.
- Dansk Geologisk Foreningens.
- Société Ouralienne des Sciences Naturelles.
- Naturwissenschaftlichens Vereins, Frankfort-on-Oder.
- Geological Survey of Finland.
- Columbian College Library.
- Imperial Institute, London.
- Chamber of Mines, London.
- Leland Stanford, jun., University.
- Geological Society of Washington.
- Biological Society of Washington.
- Philadelphia Commercial Museum.
- Wisconsin Geological and Natural History Survey.
- Buffalo Society of Natural Sciences.
- Geolog. Mineralogischen Institut, University, Freiburg-in-Baden.

The following publications have been distributed to correspondents :—

- (1.) Records, Geological Survey, Vol. VI, Part 2.
- (2.) " " " VI, " 3.
- (3.) Mineral Resources, No. 3 (2nd edition).
- (4.) " " " No. 5.
- (5.) " " " No. 6.
- (6.) Ethnology, Memoir I.
- (7.) Annual Report for 1898, to Institutions.
- (8.) Large numbers of miscellaneous publications and sets of Records and Memoirs.

The registration and slip catalogue has been kept up to date, and a large number of volumes have been bound. A considerable amount of registration and acknowledgment of publications has been done by Mr. Lindeman. The crowded position of the Library shelves is getting much worse, and the general work connected with the Library, and the prompt despatch of publications, together with attention to the numerous inquiries, both Departmental and from the public, take up a considerable amount of time.

I have, &c.,  
W. S. DUN,  
Palæontologist.

APPENDIX.

Fossils Presented, 1897-99.

Fossil.	Locality.	Donor.

Tomahawk .....	Gillamatong Creek .....	J. Higgins.

## Caves.

PROGRESS and other Reports on the Limestone Caves for the year 1899, by O. Trickett, C.S., M.S. Vict., L.S., N.S.W.

*Jenolan Caves.*

The number of visitors to these caves has largely increased. The efforts which have been made for their comfort and convenience are evidently appreciated.

An important alteration in the form of admissions to the caves was made during December. Visitors are now admitted by tickets issued at uniform charges, which cover the services of a guide and the supply of all lights, such as electric and magnesium lights and candles.

Fifty yearling trout, supplied by the Department of Fisheries, were liberated in the Jenolan River in June and 750 young trout in October. The fish are reported to be in excellent condition.

Considerable progress has been made by Mr. Maiden, Director of the Botanic Gardens, in forming and planting the area surrounding the Caves House. In connection with this work, W. Blakely was gazetted as gardener on the 25th August, 1899. For the protection of the plantations, wire netting has been erected, and active steps have been taken to prevent the trespass of stock. Hose and hose-reels have been supplied.

Fencing has been erected by the Public Works Department which provides for the protection of the purity of the water supply, for a horse paddock, and for a camping ground. The latter is conveniently situated at the back of the Caves House, and is now being improved.

The Gem of Jenolan branch of the Jubilee Cave was made available for inspection at a cost of £204 2s. 1½d., and was opened on the 7th August, 1899.

A new dam at the inlet of the turbine pipes has been constructed at a cost of £79 11s. 9d.

The Elder Cave gate which had become rotten has been replaced by a new gate at a cost of £10 16s.

A falling rock destroyed part of the fowl-yard attached to the Caves House. The yard has been repaired and extended at a cost of £6 4s., and the rock removed at a cost of £5 12s.

Authority was given for an addition to the photographic kiosk at an estimated cost of £20.

The Public Works Department carried out certain repairs to Mr. Jeremiah Wilson's residence (cost estimated at £79). Additions were also made by this department which cost £17 10s. 7½d.

A fresh supply of official caps were issued to the guides and caretakers.

Repairs have been made to the steps, netting, and pathways in several of the caverns.

The rope ladder leading down to the Underground River is being replaced by cement steps.

Mr. Jeremiah Wilson found a very small but beautiful chamber leading off the steps to Katie's Bower on the 2nd November. In October he found portions of the jaw and molar teeth of the *Diprotodon australis* in the Left Imperial Cave.

Amended Regulations have been issued and are exhibited on the Caves Reserve by posters.

*Abercrombie Caves.*

A labourer was employed for twelve weeks in opening up the Grove Cave and an upper gallery in the main arch; including material the work cost £39 16s. 5d. The caretaker rendered active assistance in this work.

Posters have been erected on the tracks leading to the caves for the guidance of visitors.

Two water tanks, sundry tools, and material for repair of cottage were supplied.

*Bungonia Caves.*

The caretaker was put to considerable inconvenience during the drought. He had to carry water for domestic purposes from the Bungonia Creek, some distance away. A track to the creek was cut to make this work easier.

Seventy feet of iron ladders were erected in suitable positions at a cost of £15 4s. 11d. One dozen candlesticks were supplied.

The Drum Cave was partly explored at a cost for material and labour of £11 19s. 8d. It will, however, be necessary to carry the exploration further before it can be ascertained whether it is desirable to incur the expenditure which would be required to make this cave accessible for inspection by the public.

*Bendithera Caves.*

Little interest is taken by the public in these caves. They were visited by only twenty-three persons during the year.

*Wellington Caves.*

The caretaker reported early in the year that he had discovered a new cave. I found it to be simply a continuation of the Limekiln Cave, and that it was not in any way attractive.

*Wombeyan Caves.*

The year has been an eventful one in the history of the Wombeyan Caves.

A well-graded road has been opened which passes through exceptionally grand and beautiful scenery on either side of the Wollondilly River. Visitors are now able to drive to the caves from any of the tourist resorts between Moss Vale and Mittagong. Hitherto the main route has been from Goulburn *via* Taralga. This road has been improved by a well-graded deviation by which the steep pinches of the old road are avoided.

The caves and their surroundings have also received attention. The works carried out include the following:—

An excellent track from the Caves House to the main caves, cut at a cost of £32 18s.

A foot bridge supplied by the Public Works Department.

A stable, 42 feet by 16 feet; cost, £98 15s. 4d.

New steps, handrails, netting, &c. in the caves.

The

The caretaker and the workmen employed deserve credit for the excellent way in which these works have been executed.

In view of the increasing popularity of these caves it has been decided to increase the accommodation for visitors. The necessary designs for additions to the Caves House have been prepared by the Government Architect.

#### *Yarrangobilly Caves.*

An addition has been made to the caretaker's quarters by the erection of a structure containing three rooms. This work, and some necessary repairs, cost £195 18s. 10d.

It is now proposed to extend the accommodation provided for visitors. For this purpose designs have been prepared by the Government Architect.

It has been decided to erect a sheep paddock fence, to enable the caretaker to supply visitors with fresh meat.

Early in the year an examination of the mutilation which has taken place in the Copper Mine Cave was made by the police. The persons who mutilated the cave were not, however, discovered. In order to protect the cave from further injury, the entrance to its terminal chamber has been closed.

As usual, an assistant guide was employed for a period of three and a half months, during the holiday seasons.

The bathing place at the thermal spring is now being repaired.

The fruit-trees recently supplied to the caretaker are growing well.

#### *Wyanbene Caves.*

These caves are situated near Krawarree, about 17 miles from Major's Creek. In order to give local residents an opportunity of inspecting them, they have been improved by the erection of iron ladders and a gate, at a cost of £27 12s. 7d.

#### *Magnesium Ribbon used.*

Ribbon issued to caretakers, 774 oz. ; cost, £49 5s. 2d. Ribbon used by guide, 699½ oz. ; amount collected for use of ribbon, £309 4s. 6d.

The Guide Book to the Jenolan Caves which I prepared was issued from the Government Printing Office during the year. It is excellently printed, and has been favourably reviewed.

I have completed surveys of the principal caves at Yarrangobilly, Wombeyan, and Abercrombie. Plans are attached of these surveys.

The caretakers, guides, and workmen at the several caves have done good work during the year.

#### Report on Colong Caves.

Sir,

Geological Branch, 9 May, 1899.

In accordance with your instructions, I have the honor to report on the limestone caves, near Burragorang.

They are situated—

- 34 miles in a direct line, W.S.W., from Camden ;
- 23       "       "       S.S.E., from Jenolan ;
- 33       "       "       S.S.W., from Wentworth Falls ;—

from any of which localities they may be reached by more or less circuitous routes.

The belt of limestone in which they occur lies between the Colong Range and the Kowmung River, and is marked here and there by more or less precipitous gorges, through which tributaries of the Kowmung River find their way.

The limestone outcrops more or less continuously for 5 miles, in a direction a little to the east of north from Lannigan's Creek to Church Creek, and is from ¼ to ½ a mile in width.

Caves occur at intervals throughout the whole length of the limestone. I beg to suggest that they be called the Colong Caves after Mt. Colong, a conspicuous landmark in the vicinity. This name is derived from the native word "Colung," signifying the home of the bandicoot.

The caves are known to some local residents as Bindook, the native word for a made waterhole.

The best known route to them is from Camden. From thence a good driving road passes through the pretty village of The Oaks, and rises gradually to the summit of Mt. Burragorang, some 1,800 feet above sea level. A descent of some 1,500 feet is then made down a well formed zigzag road. The views from this road are magnificent. On either side are mural precipices of Hawkesbury sandstone. Below lies the fertile Burragorang Valley, dotted here and there by farms and homesteads on the banks of the Wollondilly and Nattai Rivers.

The Burragorang Post Office and Store is reached halfway down the mountain side. Twelve miles further on, in the valley, is the hamlet of Upper Burragorang, where accommodation is available. The visitor may then either drive a further 12 miles to the Peaks' mining settlement, from which a rough  
bridle

bridle track leads to the main caves, or a somewhat shorter route may be taken on horseback. By the latter the caves are reached in about 16 miles from Upper Burragorang, a total distance of 50 miles from Camden. At about 3 miles from the main caves the track passes over a saddle in the range on the northern side of Mt. Colong, and the limestone bluffs of Lannigan's Creek are reached at a height of about 1,600 feet above sea level.

It is here that the main caves are situated, about 9 chains S.E. of marked tree (broad-arrow over P3.). These consist of the Colong, or Key, Onslow, and Lannigan's Caves. The Key Cave has two entrances from the cliff face. The southern one is about 60 feet and the northern one about 100 feet above the creek. This cave is from 60 to 80 feet wide and 200 feet long, and reaches a height of perhaps 70 feet. It closely resembles the Nettle Cave at Jenolan. Its arched roof is decorated with tinted stalactites. The stalagmitic deposits are also tinged with pale yellow, green, or pink, &c. Near the southern entrance are four large pillars which retain their perpendicularity although they have sunk with the floor, and are now separated from the roof which they once joined by 2 or 3 feet. Looking back from the north entrance three fine massive stalagmitic deposits are seen which resemble human heads with the features in profile. One is like a queen wearing a coronet.

Twenty or 30 feet below the Colong or Key Cave an opening in the cliff face leads into the Onslow Cave. This cave contains a series of narrow passages, in some of which water is knee-deep. On the wall in one passage are numerous "shawls." These sheets of lime are earthy and opaque, but are not wanting in beauty. Numerous bats are found in this cave.

About 30 feet above the level of the southern entrance to the Colong or Key Cave is the entrance to Lannigan's Cave. The latter is probably 600 feet in length, and contains many branch passages. Some of the passages are wide and lofty, others are barely large enough to squeeze through, and all are more or less dirty under foot. The cave contains immense accumulations of bat dung. It is necessary to take great care that the dirt is not carried on to the formations, the beauty of some of which has already been marred in this way by careless visitors.

Shortly after entering the cave a ledge is seen on which are some attractive pillars. Further on a fine opaque white stalactitic group hangs in the centre of the passage. In an opening to the left is a crystalline column, and overhanging canopy. A semi-circle of pillars and stalactites is next met with, somewhat like Nellie's Grotto at Jenolan, but not so fine. King Solomon's Temple is then entered. This chamber contains five or six large fluted and terraced columns nearly 40 feet high. One of them is surmounted by a crystalline amber-tinted formation.

Further on is a most beautiful little grotto, in which the translucent fragile stalactites are viewed through tinted and pure white and coralline stalactites and pillars.

After crawling and squeezing through a narrow passage, The "Pride of the Valley" is reached. This chamber is about 20 feet long, 10 wide, and from 5 to 8 feet high. It contains a profusion of white translucent stalactites. Two columns near its entrance are particularly fine. The beauty of the floor in one place has been spoiled by writing in pencil by some visitor. Returning, a side chamber is found to contain some attractive groups of stalactites, and a few delicate fern-like growths. Then a large chamber is entered whose floor is mostly formed of broken rocks which have fallen from the roof and sides. Here and there in it are beautiful groups of stalactites. A descent from this chamber leads to the Terraces, which may, however, be more easily reached by an opening from the passage first traversed.

The Terraces occur on a sloping floor, which they cover for a distance of perhaps 80 feet by a width of from 8 to 10 feet.

They consist of a series of crystalline basins, enclosed within white frilled and delicate rims, some of which are a foot in height. A beautiful group of stalactites and pillars serve to enhance the beauty of the formations. From the foot of the Terraces the rims of the basins have the appearance of a series of marble steps. Taken as a whole, the formation is surpassingly beautiful.

A quarter of a mile south of the Key Cave is a small cavern ornamented with coral-like formations.

North of the Key Cave, and about 10 chains east of tree broad-arrow over P 3, a small hole, high up in the limestone bluff, leads down into a cavern which contains crystalline reddish and amber tinted dripstone growths.

About 2 miles north of the Key Cave, 200 feet above Billy's Creek on its southern side, a small cavern was exhibited to me by Mr. Gaudry, which contains an oval and symmetrical bunch of the "mystery" type of dripstone formation. This specimen is about 1½ foot long by 1 foot in diameter, and is the most wonderful network of lime sprays and stalactites which I have seen. The visitor may not, however, realise its full beauty, as it occurs in a small and gloomy chamber with mud-stained walls.

Near the northern extremity of the limestone, in the vicinity of Church Creek, is the Lyttleton Cave, which, I am informed, is not particularly interesting. I did not therefore visit it.

In the Kowmung River, near at hand, good fishing is to be had, game is abundant, Wonga pigeons are plentiful; so that the locality possesses unusual attractions for the sportsman.

The caves, so far as explored, do not compare favourably with such caves as those of Jenolan, Yarrangobilly, or Wombeyan, although the Terraces in Lannigan's Cave are more extensive and beautiful than any similar formation in any other cave in the Colony, so far as I am aware.

The country is marked by steep and rugged ranges and gorges with precipitous banks. It would be an exceptionally expensive undertaking to form easy tracks to the caves. I do not think such expenditure would be justified at present.

To Messrs. W. L. Gaudry, of Colong, and J. Feld, of Upper Burragorang, my thanks are due for their active assistance during my inspection. These gentlemen, and Mr. J. Hilton, of Upper Burragorang, have taken considerable interest in the exploration and discovery of the several caves, and may be relied on to exhibit to visitors their several discoveries.

I have also to thank Mr. Sidman, editor of the *Camden News*; Mr. Hart, editor of the *Mountaineer*; and Mr. T. McMahon, of Cox's River, for information and assistance.

I have, &c.,  
O. TRICKETT.

## Report on the Wyanbene Cave.

Sir,

Geological Branch, 31 July, 1899.

I have the honor to furnish the following report on the Wyanbene Cave.

It is reached by travelling over the main road from Major's Creek to Snowball, southerly, for a little over 17 miles. A somewhat indifferent buggy-track then leads easterly across the Shoalhaven River and the Wyambene Creek and follows the southern bank of that creek to the selections of Mr. J. Wyatt. From thence the track runs southerly up a tributary of the Wyanbene Creek to the foot of the range in which the cave is situated,  $4\frac{1}{2}$  miles from the main road and 22 miles from Major's Creek.

The entrance to the cave is about 50 feet up the northern slope of the range, about 2,600 feet above sea-level and 800 feet below the top of the range, which is marked by the Wyanbene Trigonometrical Station.

From the entrance a short iron ladder leads down to the subterranean waterway.

This waterway forms the floor of the cave for some 300 feet in a south-south-easterly direction. The total length of the cave as far as explored is, approximately, 400 feet.

Although near the entrance the passage is very low, the cave is generally easy to travel through.

Chambers occur at intervals which contain dripstone growth in the form of "draperies," "cascades," and "canopies," which are somewhat attractive. These formations are mostly of a dark-brown colour, but are here and there of lighter tint, and occasionally sparkle with calcite crystals.

The terminal chambers are beautiful, and rise to a height of between 30 and 40 feet. They contain several "shawls," one of which is about 20 feet long and  $2\frac{1}{2}$  feet deep. Two columns occur among a series of amber-tinted "draperies." One alcove is marked by a beautiful white crystalline "waterfall," terraced at its upper end and surmounted by "shawl" and other formations. Midway in the cave, in an upper chamber, air occasionally rushes with great force through a small opening, making a noise that can be heard for a long distance away. This may indicate the existence of chambers not yet explored.

The cave at one time contained some semi-transparent white formations. These have all been broken off. The beautiful "shawls," which are unusually long, are almost all mutilated, and I suppose the only thing which has saved the cave from entire destruction is the dark tint of most of the formations.

Notwithstanding the mutilation which has taken place, the cave contains sufficient beauty to render it a source of pleasure to local residents, although it may not be sufficiently attractive to repay visitors from a distance for the trouble of travelling to it.

For the protection of the cave an iron gate has been placed at the entrance, and for the convenience of visitors three iron ladders have been erected in suitable positions, and a little excavation has been made in the narrow passage near the entrance. These improvements were completed on the 11th July, 1899, at a cost of £27 12s. 7d. for labour and materials.

I enclose a sketch showing the position of the Wyanbene Cave and of other caves in the vicinity, namely:—The Cheitmore Caves, the Bendithera Caves, and the Big Hole. The last named is a striking feature. It is about  $2\frac{1}{2}$  chains long, 2 chains wide, and 280 feet deep. It occurs in horizontally-bedded sandstone. The sides of the hole are perpendicular, and it is difficult to realise what has become of the material which once filled it.

I have, &c.,

O. TRICKETT.

LABORATORY: N.S.W. DEPARTMENT OF MINES.  
(Assay Furnaces.)

APPENDIX A.

Mr. John C. H. Mingaye, F.I.C., F.C.S., Analyst and Assayer to the Department, and Officer in Charge of the Government Metallurgical Works at Clyde, reports as follows :—

The bulk of the analyses, assays, &c., as hitherto, performed in the Chemical Laboratory, have been for the Geological Survey Branch.

5,260 numbered samples were received for analysis, assay, and examination during the year, being an increase of 832 over the previous year. 243 complete, proximate, partial, and qualitative analyses were furnished, against only 95 for the previous year—being an increase of 148.

The following assays have been made for various metals, &c. :—

Antimony.....	25	Iron .....	97
Arsenic.....	7	Platinum .....	...
Bismuth .....	19	Tin .....	99
Chrome .....	22	Tellurium.....	4
Cobalt .....	14	Tungstic acid .....	20
Copper.....	744	Titanic acid.....	6
Lead.....	78	Zinc .....	26
Manganese .....	57	Vanadium .....	4
Mercury .....	20	Miscellaneous .....	62
Magnesia and Lime .....	4	Silica .....	75
Phosphoric acid .....	38	Sulphur .....	4
Nickel .....	8		

Gold and silver, 4,653 assays.

Or a total of 6,081 assays.

The analyses are made up as follows :—55 complete analyses; 127 proximate analyses (coal 108, shale 18, and coke 1); 40 partial analyses, and 21 qualitative.

The following analyses were made of water :—

- (1.) Water from Sidonia, near Hay, No. 1 sample.
- (2.) " " " " No. 2 sample.
- (3.) Well water from Polly Brewan Station, Walgett.
- (4.) Artesian water from station on the borders of New South Wales.
- (5.) Artesian water from No. 2 bore, Butterbone.
- (6.) Water from artesian bore, Sidonia, No. 1.
- (7.) Well water from Darcoola, near Hay.
- (8.) Well water from Fairview, near Wyalong.
- (9.) Artesian water from Wilby Wilby Bore, near Walgett.
- (10.) Artesian water from private bore, on Belalie Station, near Bourke.
- (11.) Well water from Sylvanham, Gunbar.
- (12.) Well water from a well on Improvement Lease No. 315, County of Stuart, Cowl Cowl.
- (13.) Artesian water from Carceunga Bore, near Warren.
- (14.) Water from a well, 60 ft. deep, at Killaloe, near Warren.
- (15.) Water from well on the Reserve north of the Sand Hills, Parish of Banna, County of Cadell. (No. 1 Sample.)
- (16.) Water from well on H. C. Hamblings H.S. 95-40, south of the Sand Hills, Parish of Banna, County Cadell.
- (17.) Water from artesian bore, Haddon Rig, Warren.
- (18.) Water from Yellow Mountain.

A number of analyses made during the year for the Geological Survey Branch, being in connection with the work of that Branch, will be found given in an Appendix\* of the Government Geologist's Report; it is therefore unnecessary to repeat them here. The following are other analyses made, which I give, as they are interesting :—

(360.) Calcareous deposit from fluming, Pera Bore Experimental Farm.

No. 4143 is a sample of country rock.  
No. 760 „ basalt.

No. 3413 is a sample of nephrite.  
No. 979 „ volcanic ash.

PROXIMATE Analyses of Samples of Coal from various Collieries.

No.	Hygroscopic Moisture.	Volatile Hydro carbons.	Fixed Carbon.	Ash.	Sulphur in Coal per cent	Specific gravity	Coke per cent	Lbs of Water converted into Steam by 1 lb. of coal.	Remarks.
146	2 07	36·03	57·15	4 75	38	1 297	61 90	13 5	Coke—Well swollen, firm and lustrous Ash—Reddish tinge, granular.
260	50	22 07	49 73	27 70	..	..	..	.....	Yielded a poor description of coke Ash—Grey in colour, flocculent.
894	1 75	50 27	17 48	30 50	..	..	..	.....	Carbonaceous material. Of no commercial value.
1230	·80	1 23	84 19	13 36	·37	1 743	..	.....	Coke. Ash—Grey in colour, flocculent.

The bulk of the proximate analyses of coal are made from representative samples taken from the various collieries in New South Wales.

In the Annual Report of the United States Geological Survey (Seventeenth Report for 1895-6, page 282-283), reference is made to the occurrence of platinoid metals and vanadium in Australian coal. The statement is as follows :—

“In connection with the recent announcement of vanadium and platinum in the ashes of certain Australian coals, the following analysis of such coals are furnished by Messrs. Thirkell & Co., London :—

“Percentage of ash in coal, 1.70 per cent.

“APPROXIMATE composition of Ash.

“Metallic vanadium .....	25.1 per cent.
“Platinum metals .....	3.6 ”
“Oxygen (combined) .....	44.0 ”
“Sand and other earthy matter.....	27.3 ”

100.0 ”

“As the coals contain 1.7 per cent. of ash, this means that it contains 0.44 per cent. of vanadium, and 0.63 per cent. of platinum metals. In other words, 1 ton of the coal will yield 144 oz. 1 dwt. 3 grs. of metallic vanadium, and 20 oz. 13 dwt. 11 grs. of platinum metals.”

There is some possibility of an error in the statement that the coal, or coals in question, were obtained from New South Wales, as I know of no coals here that will give 1.7 per cent. of ash. In one of the chemical journals is mentioned the fact of a coal from Brazil, the ash being under 2.0 per cent. (?) containing a large percentage of vanadium oxide (V<sub>2</sub>O<sub>5</sub>.)

Now,

LABORATORY: N.S.W. DEPARTMENT OF MINES.  
(An Interior View)

Now, with regard to the occurrence of vanadium in our coals, a large number have been examined for the presence of that element, and in most cases it has been detected in the ashes. The amount hitherto found is very small, and considerably under 0.2 per cent. of  $V_2O_5$ , and in many cases a minute trace. In a coal from Leaconsfield it was readily detected by the yellow-greenish stains on the surface of the coal. An examination of the ashes proved the amount present to be under 0.1 per cent. of  $V_2O_5$ .

The element vanadium is widely distributed in our clays, ironstones, bauxites, &c., and has been detected in several rocks, but in all cases the amount found was exceedingly small.

In Victoria a few days ago the presence of gold was reported as having been found in a Victorian coal.

In view of these statements as to the occurrence of platinoid metals and vanadium in our coals, examinations are now being made of the ashes of a large number of coals.

PROXIMATE Analyses of Bog-head Mineral (Kerosene Shale).

No.	Hygroscopic Moisture.	Volatile Hydrocarbons.	Fixed Carbon.	Ash.	Sulphur in Shale. Per cent.	Sp. Gravity.	Remarks.

4,033	1.92	38.80	24.46	34.82	.....	.....	
4,979	.42	51.05	7.96	40.57	.....	.....	

The following are analyses of some of the waters received:—

(138.) Water from Sidonia, near Hay. No. 1 sample.

	Grains per gal.	In 1,000 parts.
Total solid matter (dried at 220° F.) .....	1,234.00	17.630
Chlorine in combination .....	610.55	8.722
Sulphuric acid „ .....	87.96	1.256
Soluble saline matter .....	1,185.00	16.930
Insoluble mineral matter .....	49.00	.700
Total solid matter .....	1,234.00	17.630

The “soluble” saline matter consists mainly of soda and magnesia, with lesser amounts of lime, potash, &c., combined with chlorine and sulphuric acid; the “insoluble,” of carbonates of lime and magnesia, silica, clay, &c. A strong saline water totally unfit for human consumption, stock, or irrigation.

(322.) Water from Sidonia, near Hay. No. 2 sample.

	Grains per gal.	In 1,000 parts.
Total solid matter (dried at 220° F.) .....	335.20	4.789
Chlorine in combination .....	150.68	2.152
Sulphuric acid „ .....	35.43	.506
Soluble saline matter .....	318.30	4.547
Insoluble mineral matter .....	16.90	.242
Total solid matter .....	335.20	4.789

The “soluble” saline matter consists largely of soda and magnesia, with lesser amounts of lime, potash, &c., combined with chlorine and sulphuric acid; the “insoluble,” of carbonates of lime and magnesia, clay, &c. The large amount of saline matter present in this water renders it unfit for human consumption, and it is not a desirable water for stock. It possibly, however, could be used with care, as it is a well-known fact that stock which have been reared on a station where these saline waters exist manage to thrive after a time, while the effect produced is often disastrous to stock newly brought into contact with these waters. The presence of a fair amount of magnesia salts in the water will tend to purge stock drinking the water.

(809.) Well water from Back Creek Station, Wyalong. If suitable for watering cattle and sheep?

	Grains per gal.	In 1,000 parts.
Total solid matter (dried at 220° F.) .....	1,442.20	20.60

The total solid matter consists mainly of sodium chloride, with lesser amounts of lime and magnesia, combined with chlorine, sulphuric acid, and carbonic acid. A considerable quantity of organic matter is present in the water.

Reported as a dangerous water, totally unfit for watering stock with.

(997.)

(997.) Well water from Darcoola, near Hay.

	Grains per gal.	In 1,000 parts.
Total solid matter (dried at 220° F.) .....	87·00	1·2427
Free ammonia.....	Nil per 100,000 parts.	
Albuminoid ammonia.....	·011     "     "	
Chemical composition of total solid matter.		
	Grains per gal.	In 1,000 parts.
Sodium chloride (NaCl).....	64·05	0·9150
Potassium chloride (K.Cl.) .....	trace.	trace.
Calcium sulphate (CaSO <sub>4</sub> ).....	11·22	·1602
Magnesium sulphate (MgSO <sub>4</sub> ) .....	2·89	·0412
Magnesium carbonate (MgCO <sub>3</sub> ) .....	6·34	·0905
Silica and silicates .....	2·10	·0300
Alumina and ferric oxides .....	·28	·0040
	86·88	1·2409

(1028.) Well water from Fairview, near Wyalong. If suitable for watering stock ?

	Grains per gal.	In 1,000 parts.
Total solid matter (dried at 220° F.) .....	1,776·60	25·38

The total solids consist mainly of soda, with lesser amounts of magnesia and lime, combined with chlorine, sulphuric acid, and carbonic acid. The water may be described as a strong saline water, totally unfit for the watering of stock.

(1602.) Well water from Sylvanham, Gunbar Well, 105 feet deep, containing 20 feet of water.

	Grains per gal.	In 1,000 parts.
Total solid matter (dried at 220° F.) .....	2,832·30	40·46 or 4·05 per cent.

The total solid matter consists mainly of sodium chloride (common salt) and sulphate of magnesia (Epsom's salt) ; there is also present a fair amount of sulphate of lime.

The large amount of saline matter present, renders it a dangerous water for stock. It may be described as a strong saline purgative water. The total solid matter in sea-water ranges from 3·5 to 4·0 per cent.

(2046.) Well water from a well on Improvement Lease No. 315, county of Stuart, Cowl Cowl Run. Stated to be poisonous to stock.

	Grains per gal.	In 1,000 parts.
Total solid matter (dried at 220° F.) .....	609·20	8·70

The total solid matter consists mainly of magnesia, with lesser amounts of soda ; combined with chlorine, and sulphuric acid.

The water is a strong "purgative," owing to the large amount of magnesia and soda salts present as sulphates. These salts act on the bowels, causing irritation and inflammation, thus reducing the animals' strength and vitality, and causing them to waste away and die. The stock should be removed from having access to this water, through drinking of which it is stated over 3,000 sheep were killed.

(2045.) Water from Carcunga Bore, near Warren. If suitable for stock, irrigation, and for use in boilers for steaming purposes ?

	Grains per gal.	In 1,000 parts.
Total solid matter (dried at 220° F.) .....	1,334·60	19·066

The total solid matter consists largely of soda and magnesia, with a lesser amount of lime, &c., combined with sulphuric acid and chlorine. May be described as a strong saline water, totally unfit for irrigation, or for use in steam boilers. It is a dangerous water for stock, owing to the large amount of salts present, especially those of magnesia and soda as sulphates.

(2590.) Water from a well 60 feet deep at Killaloe, near Warren. If suitable for stock purposes ?

	Grains per gal.	In 1,000 parts.
Total solid matter (dried at 220° F.) .....	1,247·40	17·820
Chlorine in combination.....	618·03	8·829
Sulphuric acid (So <sub>3</sub> ) .....	136·36	1·948
Magnesia (MgO) .....	66·57	·951
Lime (CaO) .....	54·05	·752

The total solid matter consists largely of soda, with lesser amounts of magnesia, lime, &c., combined with chlorine, sulphuric acid, &c. May be described as a strong saline water, totally unfit for watering stock.

(2845.) No. 1 sample taken from a well on the Reserve, north of the Sand Hills, parish of Banna, county of Cadell.

	Grains per gal.	In 1,000 parts.
Total solid matter (dried at 220° F.) .....	11·900	0·170
Chlorine in combination as chlorides .....	1·814	·0259
Sulphuric acid in combination as sulphates .....	Absent.	
Free ammonia .....	·040 parts per 100,000 parts.	
Albuminoid ammonia .....	·013     "     "	
Oxygen absorbed in 15 minutes, at 80° F....	·104     "     "	
4 hours,     "     "	·112     "     "	
Nitrogen as nitrates .....	Good reaction given (not determined).	
Poisonous metals .....	Absent.	

The total solid matter consists of soda, lime, and magnesia, combined with chlorine and carbonic acid, &c. There is also present silica, organic matter, and nitrates. The sample sent was rather small; therefore the analysis of the total solid residue, and the determination of the nitrogen as nitrates and nitrites, could not be attempted.

The amount of free and albuminoid ammonia found in the water is excessive, showing pollution from some source. It is not a good water in its present state for human consumption, and it is recommended, if no other water is obtainable, that it be boiled before use.

ANALYSES of Artesian Waters.

- (1.) Artesian water from a bore on the borders of New South Wales. District (?).
- (2.) Do. No. 2 Butterbone Bore.
- (3.) Do. Wilby Wilby Bore, near Walgett.
- (4.) Do. a private bore on Belalie Station, near Bourke.
- (5.) Do. Haddon Rig Bore, Warren.

A large amount of analytical work has been performed by myself and staff in connection with the complete analyses of iron ores, bauxites, and clays required for Mr. Geological Surveyor Jaquet's report on "The Iron Ores of New South Wales." For the Government Geologist a large number of proximate analyses of representative samples of coal and shale have also been furnished.

The Assistant Analyst and Assayer (Mr. H. P. White) has had charge of the Chemical Laboratory since the 1st October, and my thanks are due to him and the staff for the manner in which they have carried out the various duties allotted to them, which have been very heavy this year.

The interior-view illustrations of the Chemical Laboratory are reproduced from negatives taken by Mr. R. Vale, Survey Branch, Department of Mines; and the illustration of the outside view of the Metallurgical Works and Laboratory is from a negative supplied by Mr. King, photographer, George-street, Sydney.

JOHN C. H. MINGAYE, F.I.C., F.C.S.

The Under Secretary for Mines and Agriculture.

1900.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

## MINING.

(PAPERS RESPECTING AN INQUIRY INTO A STATEMENT THAT THE DAY OF A CERTAIN INSPECTION  
OF THE WALLSEND COLLIERY WAS KNOWN AT THE MINE BEFOREHAND.)

*Printed under No. 3 Report from Printing Committee, 5 July, 1900.*

### Inquiry into Complaint made by Mr. Wm. Bower that Mr. Bates made known a visit of Inspection at the Wallsend Colliery.

EXTRACT from Report of Deputation which waited upon the Secretary for Mines and Agriculture on  
Wednesday, 21st March, 1900, respecting certain matters at the Burwood Colliery.

MR. EDDEN wished to say that it has been reported to him, on good reliable authority that, in what are known as the Eastern and Boundary Crosscuts at the Burwood Colliery (he did not know where they are), the ventilation in those parts of the Burwood Mine is something outrageous, and pools of stagnant water are standing all over the place where men have to go and come, and that the place is not fit for men to work in. That has been reported to him. He was not going to give the person's name, on account of the blackballing which would follow. If this was the condition of things in this colliery, he thought it a standing and burning disgrace to the country, and thought something should be done.

In reply to a remark respecting notice being given of visits of inspection, the Minister said:—"I will tell you this: if I can get the slightest cue that an Inspector gives any notice, I will have the matter seen into."

Mr. Bower: I can give you a cue in a minute. Some time ago an instance came under my notice while I was working in the Lambton Heading District of the Wallsend Mine. The Deputy came in at 7 o'clock, and I said, "You come at 8 o'clock; that's breakfast-time." He said he had to meet Mr. Bates at 10 o'clock. I can find proof for that statement.

Mr. Watkins corroborated what was said. Circumstances had been brought under his notice amounting to absolute proof that they know when the Inspectors are coming.

Mr. Edden said there are men who blow that they can "bluff" the Mines Department.

The Minister assured those present that, in reference to the Burwood Colliery, the law would be put in force to-night.

The Minister (in reply): In reference to this matter, gentlemen, which has been placed before me, and about which Mr. Bower has given me evidence here, I shall take prompt steps. I will send for Mr. Bates at once, and I shall want to know from him (of course, Mr. Bates, like everyone else, must have a fair trial, whether he be Inspector or miner) how that came about. If Mr. Bates does not know, or denies the position, how am I going to get at it? The question is this: whatever position in life we occupy, we want to be fairly dealt with, and be given an opportunity of answering any question that may be placed before us; and I will not commit any man where there is no evidence against him.

(Later) I will also take steps that the Burwood Colliery must weigh its coal or stop.

27 April, 1900.

IN the minutes of a deputation to the Minister for Mines, on Wednesday, the 21st March, the following occurs:—

In reply to a remark respecting notice being given of visits of inspection, the Minister said:—"I will tell you this: if I can get the slightest cue that an Inspector gives any notice, I will have the matter seen into."

Mr. Bower: "I can give you a cue in a minute. Some time ago an instance came under my notice while I was working in the Lambton Heading District of the Wallsend mine. The Deputy came in at 7 o'clock, and I said, 'You come at 8 o'clock; that's breakfast time.' He said he had to meet Mr. Bates at 10 o'clock. I can find proof for that statement."

I am desired by the Minister to ask Mr. Bates if he will be good enough to explain the matter mentioned in the above.

A. A. ATKINSON,

Report herewith.—T. L. BATES, 30/4/1900. The Chief Inspector of Coal Mines. For the information of the Minister.—A.A.A., 1/5/1900.

Sir,

Hamilton, April 30, 1900.

In reply to your minute of 27th inst., I have the honour to report as follows:—I can state positively that I never gave the Deputy any previous notice of making an inspection; and neither the Manager, Under-Manager, or any official of Wallsend Colliery, are made aware of the time when I intend to commence my inspection.

I may state, for the information of the Honourable the Minister, that the inspection of Wallsend Colliery occupies me three days; and although no one is aware of the day on which I commence the inspection, after the first day's visit, the officials will naturally expect me on some other day until the inspection is completed; and probably the Deputy referred to had ascertained that I had begun my inspection.

I have, &amp;c.,

THOS. L. BATES,

Inspector of Collieries.

A. A. Atkinson, Esq.,

Chief Inspector of Coal-mines, Sydney.

Noted.—A.A.A., 1/5/1900. For the Minister's information.—R.G.A. (for the U.S.), 2/5/1900. Perhaps Mr Atkinson would kindly write, or cause Mr. Bower to be seen in reference to this matter.—J.L.F., 2/5/1900. The Chief Inspector of Collieries.—R.G.A., 3/5/1900. W. Bower, 7/5/1900.

Sir,

Department of Mines, 7 May, 1900.

With reference to the information given by you at the deputation which waited upon the Secretary for Mines and Agriculture, on the 21st March last, respecting notice being given of visits of inspection to the Wallsend Colliery,—I am directed to inform you that Mr. T. L. Bates, the Inspector who visits the mine in question, states positively that he never gave a Deputy any previous notice of making any inspection; and neither the Manager, Under-Manager, nor any of the officials of the Colliery, are made aware of the time when he intends to commence his inspection.

I should be glad if you could furnish me with the name of the Deputy, and the date on which the conversation alluded to at the deputation took place.

I have, &amp;c.

A. A. ATKINSON,

Chief Inspector of Coal Mines.

Mr. Wm. Bower,

President, Colliery Employees Federation, Newcastle.

Sir,

Wallsend, 10 May 1900.

In receipt of yours of the 7th instant, in which you ask me to furnish you with the name of the Deputy with whom I had the conversation referred to, the substance of which I gave to the Minister on the 21st of March. In the first place, I wish to know what use you intend to make of the information; because, knowing the nature of Deputies, I have no guarantee he will speak the truth. In the second place, is it my credibility which you wish to test? If so, I will produce corroborative evidence at any place you may appoint where we can all meet face to face. When you are prepared to do this I will furnish you with the name of the Deputy in time for the inquiry. I am also pleased to hear that Mr. Bates has never given any information with reference to his visits to collieries; and when this is known to the miners of this district it will relieve their minds greatly, as a great number of them are under the impression, when they see deputies "clerks" bustling round with tacks and a hammer, &c., that an inspection is either in progress or about to take place.

I have, &amp;c.

WM. BOWER.

A A. Atkinson, Chief Inspector of Collieries.

Noted.—A.A.A., 15/5/1900.

COMPLAINT with respect to alleged notice being given to Colliery Officials in regard to intended visits of Inspectors to Collieries.

18 May, 1900.

THE attached correspondence will show what has been done in regard to this matter.

I submit that there is nothing in my letter to Mr. Bower suggesting that I desire to test his credibility, nor yet anything to warrant the general tone of his letter. My only desire is to investigate the matter, as requested by the Minister.

I have no reason to doubt the veracity of Mr. Bates; and unless Mr. Bower gives the particulars asked for, I regret that I shall be unable to take any further action in the matter.

A. A. ATKINSON.

The Under Secretary.

Submitted. Mr. Bower evinces anything but a helpful spirit towards the Department.—D.C.McL., 19/5/1900. Wrote Mr. Bower on 25/5/1900.—A.A.A. Perhaps Mr. Atkinson would kindly see Mr. Bower and obtain the required information, so as to proceed with the investigation.—J.L.F., 21/5/1900.

Sir,

Sir,

Adamstown, 24 May, 1900.

You will remember that on the 21st March last, when Messrs. Bower, Curley, and myself waited upon you in reference to certain matters, Mr. Bower laid a charge against Mr. Inspector Bates of giving notice to the Wallsend Coal Co. of visits of inspection, when you stated that if such could be proved Bates should take the consequences. I trust it is not too much to ask,—Has Mr. Bower had a chance to prove his statement? If not, why not? It is two months since he made this statement, and so far I have heard nothing about it, and should like to know what has been done in the matter.

I saw it reported in the *Daily Telegraph* that "Chief Inspector Atkinson has been reappointed for another three years." Will you please inform me if such is the case; also the date upon which his former engagement expired. By so doing you will oblige,

Yours, &c.,

A. EDDEN.

To the Hon. the Minister for Mines, &c.

Acknowledge. Inform Mr. Watkins, saw the Minister about this matter, and the Chief Inspector has been in communication with Mr. Bower on the subject. Reply also to last paragraph.—D.C.McL., 28/5/1900. A. Edden, M.P., written to, 29/5/1900.

Sir,

Wallsend, 27 May, 1900.

In reply to yours of the 25th instant, I am afraid that it will be impossible for me to meet you on the dates mentioned by you and at the time specified, as it would cause myself and others to lose work, which neither they nor I can afford; but I am willing to meet you on Saturday morning next, at the office specified, if that will suit your convenience. I will forward the name of the Deputy to you, as I promised, in time for you to summon him to the place of inquiry.

I have, &c.,

WM. BOWER.

A. A. Atkinson, Esq., Chief Inspector of Coal-mines.

Wrote Mr. Bower, appointing Saturday, 1st, at 10 a.m.—A.A.A., 28/5/1900.

Sir,

Department of Mines and Agriculture, Sydney, 30 May, 1900.

I have to acknowledge the receipt of your letter of the 24th instant respecting the statement made by Mr. Bower as to Inspectors giving notice of their intended visit of inspection, and am directed to inform you that Mr. Watkins, M.P., interviewed the Minister upon this subject, and the Chief Inspector has been in communication with Mr. Bower so as to give him an opportunity of verifying his statement.

With regard to your inquiry respecting the Chief Inspector of Coal-mines, I am to say that Mr. Atkinson's term of three years expires on the 21st July, 1900, from which date his services have been retained for a further period of three years.

I have, &c.,

Under-Secretary.

A. Edden, Esq., M.P., Adamstown.

Draft for approval.—D.C.McL., 29/5/1900. • Approved.—J.L.F., 29/5/1900. Letter written, 30/5/1900.

1 June, 1900.

Will you please ask Bousfield, Under-Manager, and James Gibson, Deputy, to attend investigation, Coal-fields' office, Newcastle, at 10 o'clock to-morrow, in the matter affecting Inspector Bates. Kindly wire reply.

A. Ross, Esq., Manager, Wallsend Colliery.

A. A. ATKINSON.

Telegram from Alexander Ross, junr., to The Chief Inspector of Coal-mines.

Wallsend, 1 June, 1900.

THEY will attend.

ALEXANDER ROSS, JUNR.

Received.—A.A.A., 1/6/1900.

4 June, 1900.

As desired by the Minister, I made an inquiry into this matter on Saturday, and herewith are the notes which were taken in shorthand.

According to Mr. Bower, which was corroborated by Mr. Willis, a statement was made some time in December, 1898, by the Deputy, Mr. Gibson, that the latter had to meet Mr. Bates at 10 o'clock that morning. The Deputy denies having made such a statement. Supposing that the Deputy had made such a remark, this is no proof that Mr. Bates had informed any person of an intended visit.

Mr. Bates states positively that he did not inform any person about his visits of inspection.

Mr. Bousfield, the Under-Manager, states that Mr. Bates never gives any information about his visits; also, that after the first day of inspection he may have said, "Mr. Bates has been in such and such a district to-day; he may be coming in yours to-morrow, &c.," to the Deputies.

In my opinion, this affords a possible clue to the remark alleged by Bower and Willis to have been made by Gibson, but is no proof that Bates has in any way given the slightest information about an intended visit.

It is unfortunate, as I told Bower, that this matter was not mentioned at the time, instead of fifteen months after it is said to have taken place.

A. A. ATKINSON.

Submitted.

Submitted. There seems to me to be very little in this complaint, and I think the positive assurance of the Inspector that he did not make known to the management his intended visit should be accepted.—D.C.McL., 5/6/1900.

Of course it is to be regretted that Mr. Bower did not make his charge sooner, or rather immediately after the Deputy had told him (he was to meet Mr. Bates). I may say I have no doubt that Deputy Gibson made some remarks in reference to Mr. Bates' visit, but we have no evidence that Mr. Bates gave any notification to anyone of his visit. If Mr. Bower could have given us the date of the morning, it could have been traced as to whether it was the first day's inspection of Mr. Bates at the Wallsend Colliery or not; but having to wait for nearly eighteen months before the charge was made, I think we cannot go any further in the matter.—J.L.F., 6/6/1900. Mr. Atkinson to see.—D.C.McL., 6/6/00.

[Enclosure.]

NOTES of Evidence taken at an Inquiry into a statement made by Mr. W. Bower, miner, that the day of a certain inspection of the Wallsend Colliery by Mr. T. L. Bates, Colliery Inspector, was known at the mine beforehand, held by Mr. A. A. Atkinson, Chief Inspector of Coal-mines, at the Coal-fields' Office, Newcastle, Saturday, 2nd June, 1900, at 10 o'clock.

Present:—Mr. W. Bower, miner, Wallsend Colliery; Mr. T. L. Bates, Colliery Inspector; Mr. Bousfield, Under-Manager, Wallsend Colliery; Mr. Willis, miner, Wallsend Colliery; Mr. Gibson, Deputy, Wallsend Colliery; Mr. James Curley, secretary, Colliery Employees' Federation.

Mr. Atkinson: I propose, in the first place, to ask Mr. Bower to give his statement of the case as it occurred, and then I suppose he will probably ask his mate to give corroborative evidence.

Mr. Bower: He had not much to add to what he said to the Minister. The matter originated through a statement made by Mr. Edden, and Mr. Egan said, if he could get proof of such a thing, he would take further action; and he (Bower) stated he knew of an instance that occurred in Wallsend Colliery where a Deputy said that he had to meet Mr. Bates at 10 o'clock; this was about 7 o'clock in the morning. They were taking out pillars in the district at the time, and the Deputy came up and said he was going to lay the turns.

By Mr. Bates: It was in Gibson's district. He (Bower) said to Gibson, "Can't you wait till breakfast-time; then we can have all the coal out of the way?" Gibson replied, "I can't; if I do not lay them now I won't be able to lay them to-day, because I have to meet Mr. Bates at 10 o'clock." He (Bower) made no comment on the occurrence at all, for the simple reason that it appeared the usual thing for men to know when to expect the Inspector. He merely made a remark to the effect that it confirmed what they had suspected long enough. This was in addition to what he said to the Minister. When they were going out, about 12 o'clock, Gibson was sitting on the narrow bord, and he (Bower) said, "Hello! hasn't your man come yet?" Gibson replied, "No, not yet."

By Mr. Atkinson: He could not give the date exactly, but he could give it that close that it could be got. It would be within the last month of the last quarter of 1898—a fortnight or three weeks before Christmas. He never had occasion to refer to it, and probably he would not have done so at all, only it cropped up as he said. Mr. Edden kept him back after the deputation, as he wanted to speak to the Minister, and that was one of his charges.

Mr. Atkinson said it seemed to him that it would be taxing a man's memory a very great deal to ask him to go back so far. He thought it would have been much better to have raised the point at the time.

Mr. Bower explained that he never attempted to make the charge, because he had always been under the impression that the men seemed to know when the Inspector was coming. The matter would not have been brought up but for Mr. Edden. That gentleman had laid a complaint about the Burwood Colliery, and he was pretty strong about it. He (Bower) took exception to being kept there listening to it, as they had no official information about it at all. Following that up, Mr. Edden made use of words to this effect: that he believed the Inspectors let the management of collieries know when an inspection was to be made; and from that followed the matter now being inquired into.

Mr. Atkinson stated that the Inspectors' instructions were very definite on that point, and it was very unfortunate that this general impression existed among the men, as Mr. Bower said. Have you any recollection which day of the inspection it would be—whether it would be the first, or the second, or any other particular day?

Mr. Bower did not know which day it was, and he did not know that the Inspector was in the pit at that particular time.

Mr. Atkinson: On this particular day, which district had Mr. Bates been in?

Mr. Bower: In Millward's District—No. 2 Split, in the Lambton Heading District.

Mr. Bates found, on reference to his report book, that he inspected the Wallsend Colliery on 7th October, and in December, 1898. (To Mr. Atkinson): He could not state the order of his inspection on the occasion referred to; he had only brought his diary for last year, as he did not think he would have to go back two years. He was there on December 8, 15, and 16, 1898, and he could not say which district he was in on each respective day. He was not prepared to say that.

Mr. Bower (to Mr. Atkinson): The day on which Bates was in Millward's District was the day in question.

Mr. Bates: I can only say I was at the colliery on the three days I say. I cannot say any more, because I did not bring my diary for 1898.

Mr. Willis stated that he could not add anything to what Mr. Bower had said. Mr. Gibson came in about 7 o'clock in the morning, and said he wanted to lay the turns. They asked him to come at breakfast-time and do it, and he said if he did not lay it at once he could not do it at all as he had to meet Mr. Bates at 10 o'clock. As Mr. Bower had said, it just confirmed what the majority of them thought, that the management knew when the Inspectors were coming, and it just went to prove that their ideas were pretty correct. They mentioned it to their mates directly they came in—about half-past 8 or 9 o'clock—and they met Mr. Bates about 12 or half-past, in Millward's District—the adjoining district. This happened about eighteen months ago. He pretty well knew if he ran back in his mind how many cavils had passed since that time, and there had been six.

Mr. Bates wished to ask Mr. Bower if he knew how many days it took him (Bates) to inspect the Wallsend Colliery? Mr.

Mr. Bower answered that he did not know anything about Mr. Bates's inspections, and he did not know how many days it took him to inspect the colliery. It took him (Bower) three days, but he did not know whether Mr. Bates was quicker or slower over the business.

Mr. Atkinson (to Mr. Bates): Well, the question is, have you informed any of the officials as to your intended inspection of the colliery? No; I have not, and I would like to ask Mr. Bousfield a few questions when it comes to his turn. I do not wish to say anything more at present.

Mr. Gibson said, first of all, he would like to say that he was losing a day's work by being present at this inquiry, and he wanted to know who was going to pay him that day's work.

Mr. Atkinson: I do not know, I am sure. You have come at the request of the Mines Department, and I think they would do as fair by you as they would by any other witness in any other case.

Mr. Gibson: As regards going into Mr. Bower's place at 7 in the morning, he said he was never in any man's place at that time—not before the horse came in. With regard to knowing when the Inspector comes, he said he never knew when the Inspector was coming unless, of course, an accident happened, when he would expect the Inspector some day.

Mr. Atkinson (to Mr. Gibson): Is it possible that you might unwittingly or unintentionally make a remark to the effect that, "Mr. Bates has been to the colliery on such a day and has not completed his inspection," or, "Mr. Bates will be at the colliery to-day, and I have to meet him?" I never know when an Inspector is coming into a district at all.

Well, do you think it likely you would unwittingly make a remark to anyone that Mr. Bates had been there the first day? I do not think it is; I am sure I would not.

Mr. Bower (to Mr. Gibson): Did you ever lay a turn before the horse started in the morning? Not without I had been in early—say, at 4 o'clock.

And you did not lay one that morning? No.

Mr. Atkinson (to Mr. Bower): Do you think he did lay a turn that morning? There is no thinking about it; I am sure he did. He and his mate laid a turn at the dip and rise before we filled the skips.

Mr. Gibson (to Mr. Bower): How long did it take me to lay that turn? It took you pretty well till breakfast-time; the horses had not started when you came up and said that you would proceed to lay the turn.

Mr. Gibson (to Mr. Atkinson): I am supposed to be started at 7 o'clock, but I cannot get there at that time.

Mr. Bower: He had not done any work that morning; that is as sure as I am sitting here. We were taking out the last pillars that were taken out, so that we could speak to him without leaving our work. He laid our turns that morning before we got any skips from the horse.

Mr. Atkinson (to Mr. Bower): I thought you were suggesting he had come in particularly early on that morning? I suggested nothing of the kind. I suggested that he came in that morning at 7 o'clock. He said he was going to lay the turns, and I said "Couldn't you lay them at breakfast time, and we can have a bit of coal filled out of the way?" He said he could not wait, because he had to meet Mr. Bates at 10 o'clock; at any rate, the horse could not get in to give us any skips.

Mr. Atkinson (to Mr. Bower): The laying of these turns would not necessitate him being in earlier? No.

Mr. Gibson (to Mr. Atkinson): He had nothing more to say; that was all, as far as he was concerned. He never knew when the Inspector was coming.

Mr. Bousfield (to Mr. Atkinson): Mr. Bates had never told him when he would inspect the colliery; in fact, Mr. Bates had finished his inspection sometimes before he had seen him. He was not made aware of this circumstance at the time, either by Mr. Gibson or any other man. None of the men said anything to him about it.

By Mr. Bower: If a man had his leg broken, or was seriously hurt, or if there was an accident and the place was walled up, of course, they would expect the Inspector for a day or two perhaps.

But this was a definite statement of Mr. Gibson's? I never heard anything about it.

Mr. Bates (to Mr. Atkinson): Drummond's accident was on October 6th; there was another accident on October 28th; but there was nothing after that in that year he had to attend to.

Mr. Bousfield (to Mr. Bates): It generally took three days for Mr. Bates to inspect the mine. If Mr. Bates commenced an inspection, he went on with it till it was finished. In some cases the inspection extended over more than a week. He knew whether accidents were reported to Mr. Bates or not, and he would expect him to visit the place as soon as possible after one occurred. He was on the look out for Mr. Bates after the commencement of the inspection until he came again. If Mr. Bates was in another district one day, it would not be likely that he could tell Gibson unless he saw him after knock-off, because Gibson would have to be out of his own district. Mr. Bates did not always take the districts in the same order.

Mr. Bower said he would just like to ask Mr. Gibson if he could not refresh his memory as to whether he laid those turns that morning? I have so many turns to lay I could not say.

Mr. Atkinson thought it was rather too much to expect a man to go back that far—a man who is laying turns every day.

Mr. Gibson: How am I to know when the Inspector is coming if the overman does not know?

Mr. Bower did not know that; he did not suppose Mr. Bates wrote and told him (Gibson) when he was coming; but all he knew was that Gibson got the information from somewhere.

Mr. Willis (in reply to Mr. Gibson) said that Gibson told Bower and him about it when they were together that morning.

Mr. Gibson: I could not know the Inspector was coming unless I knew it from the overman.

Mr. Bower: There is no doubt about you saying what I have reported, and the word you got must have been outside. I am satisfied you said it; there is no doubt about it to me.

Mr. Atkinson (to Mr. Bousfield): Have you ever said anything to the Deputies after Bates has been there, something to this effect: "Mr. Bates has been in such and such district to-day; he may be coming in yours to-morrow; be on the look-out to-morrow"? Oh, yes; I have said that. I have said, "Look out, Mr. Bates may be in to-morrow."

With what particular object would you make use of such an expression? Just to see that he was escorted around the place, and to see that anything that was wrong would be righted.

Well,

Well, of course, we cannot control the management of the collieries, Bousfield, but I think it is especially unfortunate that you should make use of such knowledge as that if you have done so. Simply because you know how the men distrust—there is a feeling of distrust, that is known—when the Inspectors are coming, and I think it would be policy on your part to avoid that as much as possible? Well, I have nothing to hide. I always ask the Inspectors when they make an inspection in the pit if there is anything wants remedying.

What you admit affords a possible clue to this matter.

Mr. Bousfield (to Mr. Bates): I am aware that you always wish to be accompanied by some official of the mine when you go round; you told me that yourself.

(To Mr. Atkinson): I could not tax my memory so far as to say whether I made use of such an expression on this particular occasion. If the men themselves said they wanted anything remedying, without the Inspector at all, I try to do it for them. I do not know why they have this distrust. It seems to have cropped up this morning that there is a lot of distrust, and there is nothing in it. What is it, but simply that a lot of miners coming out at night say, "Oh! Bates has been down our road to-day"?

Mr. Bower: But this is altogether a different thing from that; this is a specific statement.

Mr. Atkinson: I think it was unfortunate, Bower, that it was not mentioned at the time? I think so too, because it could have been as easily mentioned then as afterwards, and there would not have been the same amount of denial.

Some conversation here took place between Messrs. Bousfield and Bower as to the feeling of distrust which existed amongst the men, the latter stating that this feeling could not be helped, as the men saw so much to foster it. Special efforts were made to keep the upcast going on inspection day. Mr. Bousfield claimed that this was greatly imagination. You might go to a fire just as a man is firing up. The orders were to keep an even fire going.

Mr. Bates said he had nothing more to say.

Mr. Bower said the same. It was just what he expected.

Mr. Bousfield only wished to ask whether the inspection that day was the ordinary inspection or the consequence of an accident.

Mr. Bates replied that it was not an accident that day. He investigated no accident at Wallsend Colliery on any one of the three days of this particular inspection. There was no accident after the 28th October of that year.

Mr. Bower (to Mr. Bates): Is there nothing else to cause you to make special visits for specific purposes when it is necessary for the management to know you are coming? Certainly. There are occasions when that would occur, but not in this case, because it would be the ordinary inspection. I have no record of any special business taking me there and I do not think there was. There is no record of it in the book.

Mr. Gibson had nothing further to say than that Mr. Bates had often been in his district and he did not know he had been there.

Mr. Curley, in reply to an inquiry by Mr. Atkinson as to whether he wished to say anything, stated that the only thing that suggested itself to him was this: might not Mr. Bousfield have told Mr. Gibson after the first day's inspection by Mr. Bates?

Mr. Bousfield: I admit that I may have said so after the first day's inspection.

Mr. Curley: And he could assume this, that if an official were with Mr. Bates, he might, in discussing the inspection, make the remark to Mr. Bates, "What district will you be in to-morrow?"

Mr. Bates: The Inspector could not inform him, because he does not know where he will be from one day to another.

Mr. Atkinson: Knowing the feeling there is amongst the men about the visits being known, I say it is a matter the Inspectors should be extremely careful about, and an answer to such a question should not be given by an Inspector; but it is a very likely question to be asked, Mr. Curley, as you say.

Mr. Curley: I am not saying that it would be done designedly, but it may be asked.

Mr. Bates: It is a likely question, but it is one I could not answer.

Mr. Curley (to Mr. Atkinson): Do you recollect, I drew your attention to a paragraph appearing in the Press about Mr. Dixon going to make his tour of the Northern Districts?

Mr. Atkinson explained that no one was to blame in this matter. Perhaps a Pressman happened to be on the Railway Station and saw Mr. Dixon going by train, and asked where he was going to. Mr. Dixon would probably say he was going north, and the reporter would publish it in his paper.

Mr. Curley: Since he drew attention to that paragraph, a similar paragraph had appeared, and the people at the place which the Inspector was visiting may have read the paragraph, and so received notice of the projected inspection. He thought an Inspector should not inform a reporter where he was going. Whatever suspicions they may have had in the past, they had absolute proof of the tricks that had been played on the Inspectors. It was not a matter of assumption now; it was a matter of definite proof. If an Inspector knew a colliery well, did he need to be with the manager every time he visited it. There was many a time a man did not like to speak out in front of the manager; and there were, perhaps, times a man would speak were the manager not there.

Mr. Atkinson thought it desirable that, if not the manager, some official should be with the Inspector. Such an occurrence at Home as an Inspector being without an official was most unusual; and if the men did not wish to complain before the manager, they could write either to the Inspector of the district or to himself, and their communications would be treated as confidential.

Mr. Curley: And deprecated at the same time by the Inspector.

Mr. Atkinson: I say you have no foundation for that, Mr. Curley, as far as I am aware. The matter would be investigated, not deprecated.

Mr. Bower mentioned that he did not think, from what he had seen, that either Mr. Bates or Mr. Bousfield ever troubled one another very often. Sometimes Mr. Bousfield was with him on inspections, and at other times he was not. And he could say this, in shift inspections, the men could go when they liked, and how they liked.

Mr. Bousfield thought it would be just as well for them to have an official with them.

Mr. Bower admitted that it would be better sometimes; but a Deputy would snub a man for making a suggestion.

Mr.

Mr. Atkinson: I wish this feeling of distrust would be removed; it is a most unfortunate and worrying feature.

Mr. Bousfield I have told the men in the colliery, if they have any complaints to make, make them to me, and I will not sack them. I never intimidate any man.

Mr. Atkinson: I think it would be far better if the men would speak out.

Mr. Curley thought it all very well to give such an opinion, but it was not always advisable for the men to speak out. Mr. Bower had heard a statement made to him (Mr. Curley) by a man the other day in the presence of several witnesses. He said that if there was anything adverse in the check-inspector's reports, the manager took it badly, and went to market, and gave them the rounds of the kitchen.

Mr. Atkinson thought that was a very wrong attitude for any man to take up.

Mr. Curley: In regard to Mr. Bates himself, I mentioned a case to him one day where a man complained of bad air, and Mr. Bates got annoyed because I would not give the man's name.

Mr. Bates: I think I should have the name.

Mr. Atkinson agreed with Mr. Bates.

Mr. Curley: If I state the locality of any particular mine, I do not think it is any part of the business of the Inspectors to know the man's name.

Mr. Atkinson: I can tell you, Mr. Curley, in the Old Country, the miners' representatives would trust the Inspectors with the name of a man, and do so.

Mr. Bower: Yes, but how have we learnt to distrust the Inspectors? You will find there are a good many reasons why the men learned to distrust the Inspectors at first; they are in print too, every one of them.

Mr. Atkinson: Well, is it a legacy of old times?

Mr. Bower: No, it is not only old times; it is up to date.

As there was no further evidence forthcoming, the inquiry closed at this stage.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## GOVERNMENT METALLURGIST.

(REPORT OF THE BOARD APPOINTED TO DEAL WITH APPLICATIONS FOR THE POSITION OF.)

*Printed under No. 3 Report from Printing Committee, 5 July, 1900.*

*[Laid upon the Table of the Honorable the Legislative Assembly of New South Wales, by the Secretary for Mines and Agriculture, the abovementioned Report, in answer to Questions asked by Mr. J. C. L. Fitzpatrick, M.P., on the 4th July, 1900.]*

## Report of the Board appointed to deal with applications for the position of Government Metallurgist.

To the Public Service Board,—  
Gentlemen,

Sydney, 7 December, 1899.

We beg to report that we have held two meetings for the purpose of selecting a gentleman for the position of Government Metallurgist.

In the first place, we have given consideration to the question as to whether it is advisable in the public interests that this appointment should be filled, and have arrived at the unanimous conclusion that it is undesirable to fill the vacancy, as we feel assured that the public can receive no adequate return for the expenditure involved in the appointment and the maintenance of the works.

We wish to point out that since this appointment was made the conditions have been altogether changed. When the question was originally decided there was, no doubt, a necessity for some works of the kind in the Colony, and in response to the public agitation at the time for their establishment that they were started.

Since Mr. Taylor was appointed, however, two highly-equipped private metallurgical works have been established, viz., at Dapto and at Cockle Creek, and these institutions give the information that is generally desired by the mining community for all practical purposes. Thus we feel that the necessity for Government works does not now exist.

We further wish to explain that, in order to give the same satisfaction to mine-owners as is afforded by these large privately-owned establishments, it would be necessary for the Government to expend a very considerable capital sum in equipping the works on a much more extensive scale than now exists; and by the non-filling of the appointment there will be the saving of this capital sum, as well as the large annual expenditure that would be required for the maintenance of a proper staff.

Also, in works of this kind it is necessary to constantly renew the plant and procure all new appliances and apparatus that may be brought before the public. This would likewise saddle the Government with a large burden, all of which might be saved by the abolition of the works.

We also desire to emphasise the fact that if the Government were to establish works that would fairly compete with private enterprise, the result would be that for half the time the works would be idle, but the staff would have to be paid just the same.

It may be mentioned that when the agitation for Government Smelting Works was initiated in Parliament, one of the principal arguments used was that similar institutions were in existence, and had been found to work successfully, in other parts of the world; and it was desirable that New South Wales should not be behind other countries in endeavouring to work out the metallurgical problems connected with her metalliferous deposits. That this contention was based upon incorrect premises is evident in the fact that there is only one place in the world where Government Metallurgical Works have been successfully established, viz., Freiberg, in Germany, and the conditions which exist there are totally different from the conditions in New South Wales, because the Freiberg works are run in connection with State-owned mines, whereas the New South Wales mines are all in the hands of the public.

Hence it follows that Government works in this Colony, if run on commercial lines, must compete directly with private enterprise. The only alternative is to conduct the Government works on an extremely extravagant scale. The chief contention is that these works should be available for the treatment

of small parcels of ore of all classes which may be sent in by mine-owners desirous of ascertaining the best method of treatment. If such a policy be continued, it is clear that all the machinery employed would require to be cleaned up after each parcel had been operated upon, inasmuch as each owner would demand the metal actually obtained from his particular ore. An idea of the expense entailed by such a mode of procedure may be obtained when it is mentioned that in similar establishments, which are run on commercial principles, the method invariably followed is to buy the various ores, in parcels of all sizes, according to their assay value, and when large quantities have been acquired to treat, in conjunction, those varieties which are mutually suited for any metallurgical process. Thus at the present time the argentiferous galena and zinc-blende ores of Broken Hill, Burragorang, and Borah Creek are being successfully smelted with the complex tellurium-gold ores from Western Australia; mixed sulphides, containing a small proportion of copper, are being economically smelted with low-grade auriferous slates which could not be profitably treated *per se*. Many other analogous cases might be quoted to prove that any attempt on the part of the Government to treat small parcels of all the ores occurring in New South Wales must result in very great cost to the State.

If further arguments are needed to show the inadvisability of establishing Government Metallurgical Works on these lines, it may be stated that there is considerable doubt whether the services of a gentleman possessing all the qualifications necessary for the carrying out of the ideal aimed at could be obtained. There are probably very few, if any, persons who, in the course of an ordinary life, have acquired a thorough practical experience of the extraction of all the different metals, and any such person could command a very large salary indeed. But if an individual could be found who, in addition to such attainments, possessed sufficient genius to enable him to devise original methods for the treatment of complex ores, it is hardly conceivable that he would accept a salary at all, inasmuch as he could rapidly acquire a fortune in commercial enterprises.

The principal arguments in connection with this question may be summarised as follow:—

1. Government Metallurgical Works have not been established in any country in the world where the conditions are similar to those existing in New South Wales.

2. If such smelting works were run on commercial lines in New South Wales there would be an unwarrantable interference with private enterprise.

3. The only alternative would be to conduct the works in an extravagant manner, and at considerable cost to the State, for which the State would get no adequate return.

4. We are of opinion that it is not possible to obtain a metallurgist possessing all the qualifications which seem to have been expected, and especially that of being able to devise an economical process for the treatment of every variety of so-called intractable ore which might be forwarded to him.

This is said without disparagement to those who have applied for the position, among whom are some possessing very high scientific attainments and great metallurgical skill and reputation in regard to the extraction of certain metals.

5. There is really no necessity for Government Metallurgical Works in this Colony, as the requirements of the public are provided for by the two very efficient Customs Works, viz., at Cockle Creek, near Newcastle, and at Dapto, Illawarra.

For the reasons given above, we have, after mature consideration, to recommend that the position of Government Metallurgist be not filled; and as no good results can be expected from the works, we consider no further expenditure in connection therewith should be incurred.

We have, &c.,

D. C. McLACHLAN, Chairman of the Board.

W. H. J. SLEE,

T. W. E. DAVID,

C. W. DARLEY,

EDWARD F. PITTMAN,

A. LIVERSIDGE,

} Members of the Board.

**CASE OF WILLIAM REID.**

(PETITION FROM WILLIAM REID, PRAYING TO BE REPRESENTED BY COUNSEL OR SOLICITOR  
BEFORE SELECT COMMITTEE ON.)

*Received by the Legislative Assembly, 18 September, 1900.*

---

To the Honorable the Speaker and the Members of the Legislative Assembly of New South Wales.

The humble Petition of William Reid,—

SHOWETH :—

That a Select Committee of the Legislative Assembly has been appointed to inquire into the conduct of Mr. Warden Maitland concerning certain mining tenements, situate at Brindabella, in the Colony of New South Wales, and that the said William Reid prays that he may be allowed to appear by Counsel or Solicitor before such Select Committee.

And your Petitioner will ever pray, &c.

CASE OF WILLIAM REID.

(PETITION FROM E. L. MAITLAND, OF BROKEN HILL, PRAYING TO BE REPRESENTED BY COUNSEL OR ATTORNEY, OR IN PERSON, BEFORE SELECT COMMITTEE ON.)

---

*Received by the Legislative Assembly, 20 September, 1900.*

---

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of E. L. Maitland, of Broken Hill, in the Colony of New South Wales,—

HUMBLY SHOWETH:—

1. That on the 29th day of August, in the year of our Lord one thousand nine hundred, your Honorable House appointed a Select Committee to inquire into and report upon the action of Mr. Warden Maitland in connection with the case of William Reid.

2. That your Petitioner humbly prays that he may be represented by counsel or attorney, or in person, before the Select Committee appointed to inquire and report upon the matter, with the right to call witnesses and adduce evidence, and to examine and cross-examine such witnesses as may give evidence before the Select Committee.

And your Petitioner, as in duty bound, will ever pray.

E. L. MAITLAND.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE  
LEGISLATIVE ASSEMBLY.

VOTES No. 34. TUESDAY, 28 AUGUST, 1900.

16. CASE OF WILLIAM REID:—Mr. Holman moved, pursuant to *amended* Notice,—  
(1.) That a Select Committee be appointed to inquire into and report upon the action of Mr. Warden Maitland in connection with the case of William Reid.  
(2.) That such Committee consist of Mr. Fegan, Mr. Cook, Mr. Meagher, Mr. Richards, Mr. Carroll, Mr. Nielsen, Mr. Thomas, Mr. Hurley, and the Mover.  
Question put and passed.

VOTES No. 43. TUESDAY, 18 SEPTEMBER, 1900.

5. CASE OF WILLIAM REID:—Mr. Meagher presented a Petition from William Reid, representing that the House had appointed a Select Committee to inquire into the conduct of Mr. Warden Maitland concerning certain mining tenements situate at Brindabella, in the Colony of New South Wales, and praying that Petitioner may be allowed to appear by counsel or solicitor before such Select Committee.  
Petition received.  
Ordered to be referred to the Select Committee.

VOTES No. 45. THURSDAY, 20 SEPTEMBER, 1900.

5. CASE OF WILLIAM REID:—Mr. Thomas presented a Petition from E. L. Maitland, of Broken Hill, representing that the House had appointed a Select Committee to inquire into and report upon his action as Warden in connection with the case of William Reid, and praying that Petitioner may be represented by counsel or attorney, or in person, before such Committee, with the right to call, examine, and cross-examine witnesses.  
Petition received.  
Ordered to be referred to the Select Committee.

VOTES No. 47. WEDNESDAY, 26 SEPTEMBER, 1900.

5. CASE OF WILLIAM REID:—Mr. Holman (*by consent*) moved, without Notice, That the Select Committee on "Case of William Reid" have leave to sit during the sittings of the House, or any adjournment thereof.  
Question put and passed.

VOTES No. 77. TUESDAY, 20 NOVEMBER, 1900.

10. CASE OF WILLIAM REID:—Mr. Holman, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and report this subject was referred on 28th August, 1900.  
Ordered to be printed.

## CASE OF WILLIAM REID.

## REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 28th August, 1900, “*to inquire into and report upon the action of Mr. Warden Maitland in connection with the case of William Reid,*” and to whom was granted on 26th September, 1900, “*leave to sit during the sittings of the House or any adjournment thereof,*”—have agreed to the following Report:—

Your Committee having examined the witnesses named in the List (whose evidence will be found appended hereto) find—

That William Reid preferred a charge of prejudice and denial of justice against Mr. Warden Maitland, and also accused him of misleading the Mines Department in connection with certain mining transactions, the result being that he, Reid, suffered serious loss.

That, upon full inquiry, there appeared no ground for any such charge; that Mr. Maitland acted throughout Reid's case with discretion and impartiality; and that he seems, generally, to have filled his position as Warden to the best advantage of the mining population in his district.

No. 2 Committee Room,

Legislative Assembly,

16th November, 1900.

W. A. HOLMAN,  
Chairman.

1900.

## PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 30 AUGUST, 1900.

MEMBERS PRESENT :—

Mr. Holman,		Mr. Nielsen,
Mr. Richards,		Mr. Thomas.

Entry from Votes and Proceedings appointing the Committee *read* by the Clerk.  
Committee deliberated.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

TUESDAY, 25 SEPTEMBER, 1900.

MEMBERS PRESENT :—

Mr. Holman in the Chair.

Mr. Nielsen,		Mr. Richards,
		Mr. Thomas.

Entries from Votes and Proceedings referring the Petitions of William Reid and E. L. Maitland, respectively, praying to be heard by counsel or attorney, or in person, before the Committee, *read* by the Clerk.

Original Petitions before the Committee.

Resolved (*on motion of Mr. Nielsen*), That the prayers of the Petitioners be granted.

Mr. Colonna Close appeared as Counsel for Mr. William Reid.

Mr. E. L. Maitland appeared in person.

William Reid (*miner*) sworn and examined.

[Adjourned till To-morrow at 11.15 o'clock.]

WEDNESDAY, 26 SEPTEMBER, 1900.

MEMBERS PRESENT :—

Mr. Holman in the Chair.

Mr. Cook,		Mr. Richards,
		Mr. Thomas.

Mr. Colonna Close (*Barrister-at-Law*) appeared on behalf of Mr. William Reid.

Mr. E. L. Maitland appeared in person.

Duncan Clark McLachlan (*Under Secretary for Mines and Agriculture*) called in, sworn, and examined.

Witness *produced* departmental papers in connection with the case Reid *v.* the Bank of North Queensland, in relation to mining tenements at Brindabella.

Witness withdrew.

William Kessell (*Clerk in the Department of Justice*) called in, sworn, and examined.

Witness produced papers in the cases of Reid *v.* Paterson, and Reid *v.* Davidson, in regard to certain mining tenements at Brindabella.

Witness withdrew.

William Reid recalled and further examined.

Resolved (*on motion of Mr. Thomas*), That the Chairman obtain leave of the House for the Committee to sit during the sittings of the House or any adjournment thereof.

[Adjourned till To-morrow at 11.15 o'clock.]

THURSDAY, 27 SEPTEMBER, 1900.

MEMBERS PRESENT :—

Mr. Holman,		Mr. Nielsen.
-------------	--	--------------

In the absence of a quorum, the meeting called for this day lapsed.

TUESDAY, 9 OCTOBER, 1900.

MEMBERS PRESENT :—

Mr. Holman in the Chair.

Mr. Nielsen.		Mr. Thomas.
--------------	--	-------------

Mr. E. L. Maitland appeared in person.

William Kessell recalled and further examined.

Witness

Witness *produced* Depositions in the case of Reid v. Davidson, and Reid v. Paterson, heard at Queanbeyan Police Court in 1895.

Witness withdrew.

William Reid recalled and further examined.

[Adjourned till To-morrow at 11:20 o'clock.]

**WEDNESDAY, 10 OCTOBER, 1900.**

MEMBERS PRESENT:—

Mr. Holman in the Chair.

Mr. Cook,		Mr. Meagher,
Mr. Nielsen,		Mr. Richards,
Mr. Thomas.		

Mr. Colonna Close (*Barrister-at-Law*) appeared on behalf of Mr. William Reid.

Mr. E. L. Maitland appeared in person.

Entry from Votes and Proceedings granting leave to the Committee to sit during the sittings of the House, or any adjournment thereof, read by the Clerk.

William Reid recalled and further examined.

Edgar Hamilton Ray (*Registrar, Department of Mines*) called in, sworn, and examined.

Witness withdrew.

Ordered, that Mr. E. C. Harris and Mr. P. Schumack, Queanbeyan, be summoned to give evidence on Tuesday next, at 11:30 o'clock, and Mr. W. D. Downing, solicitor, Queanbeyan, on Wednesday next, at 11:30 o'clock.

[Adjourned till Tuesday next at 11:30 o'clock.]

**TUESDAY, 16 OCTOBER, 1900.**

MEMBERS PRESENT:—

Mr. Holman in the Chair.

Mr. Cook,		Mr. Hurley,
Mr. Nielson,		Mr. Richards,
Mr. Thomas.		

Mr. Colonna Close (*Barrister-at-Law*) appeared on behalf of Mr. William Reid.

Mr. E. L. Maitland appeared in person.

William Richard Collis (*Clerk in Charge of Lease Branch, Mines Department*) called in, sworn, and examined.

Witness *produced* letter from E. W. O'Sullivan, Esq., M.P., dated 4th June, 1895, to the Under Secretary for Mines, asking whether William Reid could sue the Bank of North Queensland in the Warden's Court for breach of agreement: Report by Mr. Warden Maitland, dated 6th June, 1895, with minute by the Under Secretary thereon; further Report by Mr. Warden Maitland, dated 29th August, 1895.

Witness withdrew.

William Reid further examined.

Edwin Charles Harris (*Auctioneer*) called in, sworn, and examined.

Witness withdrew.

Peter Schumack (*Clerk*) called in, sworn, and examined.

Witness withdrew.

Edwin Charles Harris recalled and further examined.

Witness withdrew.

Robert Etheridge (*Curator of the Australian Museum*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till To-morrow at 11:20 o'clock.]

**WEDNESDAY, 17 OCTOBER, 1900.**

MEMBERS PRESENT:—

Mr. Holman in the Chair.

Mr. Cook,		Mr. Richards,
Mr. Thomas.		

Mr. Colonna Close (*Barrister-at-Law*) appeared on behalf of Mr. William Reid.

Mr. E. L. Maitland appeared in person.

Alfred John Charter (*Manager of the Sydney Branch of the Bank of North Queensland*) called in, sworn, and examined.

Witness withdrew.

John Robb Baxter Bruce (*Solicitor for the Bank of North Queensland*) called in, sworn, and examined.

Witness withdrew.

William Davies Downing (*Solicitor*) called in, sworn, and examined.

Witness withdrew.

William Stewart McAlister (*Mine Manager and Mining Engineer*) called in, sworn, and examined.

Mr. Close addressed the Committee.

The Chairman submitted the following claims for witnesses' expenses:—E. C. Harris, £1 10s.; P. Schumack, £3 3s.; W. D. Downing, £6 6s.; W. S. McAlister, £1 1s.

Claims considered and passed.

[Adjourned till To-morrow at 2:30 o'clock.]

1900.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

CASE OF WILLIAM REID.

TUESDAY, 25 SEPTEMBER, 1900.

Present:—

MR. NIELSEN,

MR. THOMAS.

MR. RICHARDS,

W. A. HOLMAN, ESQ., IN THE CHAIR.

Mr. Colonna Close, instructed by Mr. A. C. Roberts, appeared as Counsel for Mr. Reid.  
Mr. E. L. Maitland appeared in person.

William Reid sworn and examined:—

1. *Mr. Colonna Close.*] What are you? A miner.
2. Where do you live? Brindabella.
3. How long have you been a miner? About thirty years.
4. During the whole of that time, have you held a miner's right? Yes, excepting one year.
5. Was that one year at any time during the currency of this case? No; it was some twenty years ago.
6. At the time that you applied to Mr. Maitland for a summons, had you a miner's right? Yes.
7. Will you detail to the Committee what you said to Mr. Maitland, and what he replied when you applied for a summons? It was in consequence of an agreement that the Bank of North Queensland had entered into to put me in possession of certain mining tenements at once, which were not transferred to me for seven months afterwards.
8. Did you ever find out what was the reason why the Bank of North Queensland did not transfer to you the mining tenements, in accordance with the written agreement that they were to be transferred at once? Yes; I discovered that they were not the registered owners.
9. Did you discover anything about their being the registered mortgagees? Yes; they were neither the registered owners nor the registered mortgagees.
10. Did you find that out by looking at the books at the Mining Registrar's office at Queanbeyan? Yes.
11. Did you find out later on that they were not registered in Sydney, either as the owners or the mortgagees? Yes.
12. Will you detail to the Committee the conversation that you had with Mr. Maitland upon that particular occasion? I applied to Mr. Maitland for a summons against the Bank of North Queensland for a breach of this agreement they had entered into.
13. Did Mr. Maitland during that conversation say that you ought to have applied to him in Court? No.
14. Did he intimate that the street was an improper place for you to apply to him? No, certainly not.
15. *Chairman.*] Did you apply to him in the street? Yes; in the street near to the Court-house.
16. *Mr. Colonna Close.*] Have you ever known others who have intimated to him in the street that it was their intention to apply to him for a summons when he was on the Bench, or have you yourself ever made such an intimation in the street? I knew it was necessary to apply to the Warden to appoint a day for the

W. Reid.  
25 Sept., 1900.

- W. Reid. the hearing of the summons. I intended to go to the clerk for the summons, but Mr. Maitland would have had to appoint a day for hearing it. That was my object in speaking to Mr. Maitland in the street.
- 25 Sept., 1900. Mr. Maitland refused to grant me a summons, and said that his Court had no jurisdiction, and that I would have to go to the Supreme Court. I then told Mr. Maitland that I was guided by the Mining Act, which I had in my hand, and I referred him to the section bearing on that point. Mr. Maitland said he knew the Mining Act, and that it was not for me to dictate to him—that he knew his duty, and would not grant me a summons in the Warden's Court, and that I would have to go to the Supreme Court.
17. Did you, in consequence of that refusal on the part of Mr. Maitland, communicate with any one? Yes; I reported Mr. Maitland to the Mines Department.
18. Did you ever get a document, in the shape of a letter or something else, whatever it may have been, admitting that Mr. Maitland had refused you a summons, and would now grant you a summons? Yes; some four months later on I did.
19. *Chairman.*] From whom did you get this document? It came from the Mines Department, through E. W. O'Sullivan.
20. *Mr. Colonna Close.*] After that you brought an action in the Supreme Court? Yes.
21. Why did you not go on with that action? My means were exhausted. I went as far as I could; but there were such demands made upon me that I could not go any further.
22. Who was your solicitor in that case? Mr. Levien.
23. And you state that he made such demands upon you that you could not comply with them, and you had to abandon the case? Yes; I afterwards received a communication from the Mines Department, stating that I could go into the Warden's Court.
24. What did it cost you to bring that action in the Warden's Court? I cannot say from memory.
25. What was the cost of the summons? Six shillings and sixpence, I think.
26. The result was that your means were absolutely exhausted, and you were not able to go on with the case in the Supreme Court? Yes.
27. *Mr. Thomas.*] Did you go to the Supreme Court because Mr. Maitland said you could not go to the Warden's Court? Yes.
28. *Mr. Colonna Close.*] It was after you had gone to the Supreme Court that you got this notice from the Mines Department, stating that Mr. Maitland admitted that he had refused you a summons? Yes. I then came back to the Warden's Court.
29. You made an agreement with Mr. Patterson, the Manager of the Sydney Branch of the Bank of North Queensland, for the purchase of certain mining tenements to be transferred to you at once on a certain consideration;—you paid £200, and you afterwards found that the Bank of North Queensland had no more right, title, or interest in those mining tenements than I have at the present moment? Yes; that is correct.
30. Were you ready and willing to pay, and did you afterwards offer the £200 on fulfilment of the terms of sale? Yes.
31. Was the reason why you did not pay it, because they did not fulfil the terms of sale? Yes.
32. The moment they fulfilled the terms of sale, did you pay them £200? Yes.
33. *Chairman.*] Had the delay of seven months occurred before you took action, or was it going on while you were taking action in the Court? It occurred before I took any action.
34. Had you been in possession for seven months when you went to Mr. Maitland? Yes; I had this transfer, but not from the Bank of North Queensland, but from the Goodradigby Company.
35. You took out a summons in the Supreme Court before you heard from the Mines Department, and you heard eventually from the Mines Department that Mr. Maitland would give you a summons? Yes.
36. Before you heard this, you had taken out a summons in the Supreme Court? Yes.
37. Whom was that summons against? Against the Bank of North Queensland.
38. *Mr. Colonna Close.*] You had to abandon this action in the Supreme Court, in consequence of want of means? Yes.
39. You ultimately got a summons from the Warden for the Warden's Court? Yes.
40. Who appeared for you there? Mr. O'Brien, solicitor, of Goulburn.
41. Had you ever appeared in the Warden's Court before? Yes.
42. How many times? Several times.
43. Did you ever know, when appearing in the Warden's Court, that any evidence was heard until a miner's right was asked for? That has been the first question put to me when in the box. I would be asked by the Warden what I was, and I would say, "A miner." He would say, "Do you hold a miner's right?" I would answer, "Yes." He would then say, "Produce it." Those were the questions always put, and I expected the same questions to be put to me by Mr. Maitland.
44. In the Court, when you were in the witness box, had you your miner's right? Yes; it was in a little book which I held sometimes in my hand, and which sometimes was in my pocket, whilst I was in the Court.
45. Were you ever asked for that miner's right? No.
46. By anyone? Not by anyone.
47. Were you then allowed to go into evidence? Yes.
48. Directly after the case was over, did you see Mr. Maitland? Yes; I thought it my duty to do so.
49. Where was it that you saw him? In the street—about half way between the Court-house and the hotel where he was staying.
50. Did you have any conversation with him? I stopped him in the street and said, "Why is it you did not demand to see my miner's right? I had it in my hand, and in my pocket whilst giving evidence." He replied, "To tell you the truth, Reid, I never gave it a thought; but you should have gone to the Supreme Court when I told you."
51. Did any other conversation occur between you? No. We parted; he went to his hotel.
52. What followed that decision;—what did the Bank of North Queensland do? They were then about to make me bankrupt.
53. Did they make you bankrupt after that? Yes. That four months' delay enabled them to do so.
54. That is, had the case been heard at the time you asked for a summons, it is your opinion that you ought to have got a verdict, and the bank could not have made you bankrupt, and you would not be in the financial position you are now in? Certainly, they could not have made me bankrupt.
55. How long after the conversation that occurred about the miner's right did you see Mr. Maitland? After I had been declared bankrupt I again saw Mr. Maitland.

56. Will you tell me the conversation that occurred then between you and him? It was in the magistrates' room in Queanbeyan. I asked Mr. Maitland how it was that the Bank, not being the registered owners, were allowed to claim the mining tenements without being criminally prosecuted. Mr. Maitland replied, "They are the registered owners of those mining tenements at Brindabella." I told him that I had searched the local books in the Mining Registrar's Office, and could find no record of any registration or mortgage held by the Bank of North Queensland. Mr. Maitland replied, "They are registered in Sydney—not locally." He added that if I did not like to believe him I could ask Mr. Gould, who would satisfy me on the point.

W. Reid.

25 Sept., 1900.

57. Mr. Gould was Minister of Justice at that time, was he not? Yes.

58. Are you sure that Mr. Maitland did not refer you to the Minister for Mines? No; it was to Mr. Gould. I went to the Mines Department, and was there in the presence of Mr. E. W. O'Sullivan, and had a question asked by Mr. O'Sullivan. The reply was that the Bank of North Queensland were not, and never were, the registered owners or the mortgagees of any mining tenements at Brindabella.

59. After you had been to the Mines Department in Sydney, and found out that the Bank of North Queensland were not the registered owners, what did you do? I sought criminal proceedings then.

60. Against whom? Again John Davidson and Mr. Patterson. Mr. Davidson, who was a solicitor at Goulburn, had charge of my case in the Supreme Court at Goulburn, in which I got a verdict of £383 against the Goodradigby Company.

61. Did you search the records of the Warden's Court at Queanbeyan to see if the Bank of North Queensland were the registered owners or the mortgagees of these mining tenements? Yes, I did.

62. You found they were not? Yes.

63. Is it not a fact that the Registrar of the Mining Court brought up, in the Supreme Court at Goulburn, the mining books for the years during which the Bank of North Queensland would have been registered, and there exhibited them, and swore that the Bank of North Queensland had never been registered? Yes.

64. Did you hear him in the witness-box? Yes.

65. Will you tell the Committee the circumstances connected with that announcement from the Bench on the part of Mr. Maitland, about granting or refusing any warrant or summons to you? I sought criminal proceedings against Patterson and Davidson, and also intended to charge Mr. Maitland; but I was refused a summons.

66. Did you tell anybody you intended to charge Mr. Maitland? Yes; Mr. Maitland's clerk, Mr. Thomas, who issued a warrant at my request. He was Mining Registrar at Queanbeyan at the time.

67. *Mr. Colonna Close.*] Will you tell us how you know, and what you know, about this alleged announcement of Mr. Maitland from the Bench with respect to granting you a summons or a warrant, or not granting it? Yes. I obtained a summons against Davidson from Mr. J. J. Wright, J.P., of Queanbeyan, and the case was dismissed.

68. Before whom was that case heard? J. J. Wright, John Gale, and Mr. Bull.

69. What was your charge against Mr. Davidson? Obtaining money by false pretences.

70. Was that the Mr. Davidson who was afterwards convicted on a similar charge? Yes.

71. What was the announcement you allege that Mr. Maitland made from the Bench with regard to asking every Justice to refuse you a warrant or a summons then or at any future time? Mr. Maitland was on the Bench when I applied to have a warrant issued against Patterson. Mr. Maitland declined to grant a warrant, and cautioned his brother magistrates not to grant Reid a summons or a warrant on any future occasion, should he apply for one.

72. Did he mention particularly against Patterson, or speak generally? No; he did not. He said not to grant Reid a summons or a warrant on any future occasion, should he apply for one.

73. *Chairman.*] Were others in the Court at the time? Yes; the Court was full.

74. *Mr. Richards.*] Any Press representative there? Yes.

75. Was it reported? Yes.

76. *Mr. Colonna Close.*] Were you, in spite of that, able to get a warrant against Mr. Patterson, the bank manager? I did a little time after, when Mr. Thomas, a J.P. and Mining Registrar, came there.

WEDNESDAY, 26 SEPTEMBER, 1900.

Present:—

MR. COOK,

MR. THOMAS.

MR. RICHARDS,

W. A. HOLMAN, ESQ., IN THE CHAIR.

Mr. Colonna Close, instructed by Mr. A. C. Roberts, appeared as Counsel for Mr. Reid.

Mr. E. L. Maitland appeared in person.

Duncan Clark McLachlan, Under Secretary for Mines and Agriculture, sworn and examined:—

77. *Chairman.*] Do you produce all the papers in the possession of your Department connected with the case Reid v. The Bank of North Queensland in relation to mining tenements at Brindabella? Yes.

78. *Mr. Colonna Close.*] Is there amongst those papers a letter in which Mr. Maitland intimates to the Mines Department that the Bank of North Queensland is registered either as owners or mortgagees in the local court at Queanbeyan? No; I do not think there is such a letter in existence.

79. Never has been in existence? Not as far as I know.

80. Can you tell me whether, through Mr. Rae, the Registrar, you have heard that he had an intimation from Mr. Maitland—whether it was a private or a public intimation connected with the office I do not know—that the Bank of North Queensland was registered as owners or as mortgagees in the Warden's Court at Queanbeyan? I have no knowledge of it.

81. *Mr. Maitland.*] In a matter of this sort, the registration of mining tenements has nothing to do with the Warden? Nothing.

82. You simply communicate with the Mining Registrar? Yes; he is the officer in charge of that matter.

83.

D. C.  
McLachlan.

26 Sept., 1900.

- D. C. McLaughlan. 83. It is a matter of which I, as Warden, would have no knowledge? I do not suppose you would know what was registered.
- 26 Sept., 1900. 84. *Mr. Colonna Close.*] Therefore, if the Warden, not having any jurisdiction over a knowledge of the registration, volunteered the information that they were registered, and it was found that they were not registered, would the Mines Department then regard the Warden, doing such a thing as that, as following his official business, or simply as volunteering the information without any reason? I do not know. Of course, the Registrar, although he is responsible for the work, is under Mr. Maitland, and if Mr. Maitland chose to make any inquiry as to what the registrations in the book were, they would be given to him.
85. If the Warden has nothing to do, the Registrar only having to do, with the registration, and if the Warden was asked a question, and he deliberately said that he knew that they were registered, would that not involve, as an inference, that he had asked the Registrar, or knew personally, that that was the case? I would assume that he asked the Registrar.

William Kessell, Clerk in the Department of Justice, sworn and examined:—

- W. Kessell. 86. *Chairman.*] Do you produce certain papers bearing on the case of Reid v. The Bank of North Queensland in regard to some mining tenements at Brindabella? I produce certain correspondence respecting cases of Reid against Paterson, and Reid against Davidson.
- 26 Sept., 1900. 87. Do those papers include an application by Mr. Reid for a warrant for the arrest of Paterson? No, they do not. These are court proceedings. I have sent to Queanbeyan for those, but they have not come down yet.
88. The warrant for the arrest of Paterson would not be amongst these papers? No.
89. Would they be amongst the papers to come from Queanbeyan? Yes.

William Reid recalled and further examined:—

- W. Reid. 90. *Mr. Colonna Close.*] There was some little misunderstanding yesterday about your being in possession; I want that cleared up;—after the decision in the Warden's Court did you appeal against that decision?
- 26 Sept., 1900. Yes.
91. What was the cause of your not going on with it? The Official Assignee declined to go on with the matter, I being declared bankrupt.
92. That was the reason why you did not go on with the appeal—because the Bank of North Queensland at once made you bankrupt? Yes.
93. *Chairman.*] Was the Bank of North Queensland a creditor of yours—did you owe them any money? According to their own showing, I did.
94. On what? Interest on a bogus mortgage deed.
95. *Mr. Colonna Close.*] You entered into terms of sale, with possession at once, of mining tenements? Yes.
96. The condition was to pay £200 the moment the transfer was made? Yes.
97. Seven months elapsed, I think, before the transfer was made? Yes.
98. The moment the transfer was made you paid the £200? Yes.
99. From when did the Bank claim interest? They claimed interest from the date of sale.
100. From the date of the terms of sale? Yes.
101. And you considered that you had to pay interest only from the date of the transfer? Yes. I refused to pay interest from the date of sale.
102. You had, in those seven months, lost a valuable property through their delay; and they, in addition to that, wanted to charge you interest during the seven months during which you had not this property in possession? Yes.
103. Were you in possession of that property at the time you brought this action against the Bank of North Queensland in the Warden's Court? I was in possession.
104. But in what sense? As agent for Jackson. The whole property had been transferred to Jackson—that is, the mining property.
105. How was it that you became agent, and how was it that Jackson became possessed of this property? The mine became valueless to me on account of the water being cut off, and I was indebted to Jackson some hundred pounds for wages.
106. And was the only means you had of paying him by transferring this property to him? That was the only means I had.
107. And that was the sense in which you were in possession? Yes, as agent for Jackson.
108. Is it not a fact that at the present moment you are still bankrupt? Yes.
109. You never got your certificate? No, I did not.
110. And any right, title, or interest you have in real or personal estate is all in the hands of the Official Assignee? Yes, I am informed that that is so.
111. Yesterday you said that Mr. Maitland told you that he had no jurisdiction when you asked him for a summons, and that you must go to the Supreme Court;—from what Mr. Maitland told you, were you under the impression then that you had no other resort except the Supreme Court? Yes.
112. You went to the Supreme Court? Yes.
113. What did you do to find the costs to carry on the action? I had to mortgage my stock.
114. Did that supply sufficient money for you to carry on this case in the Supreme Court? No.
115. What was the result? The result was that Mr. Leven refused to go on with the case.
116. What was the result on the stock? The mortgagees closed on the stock—what I had left—and sold them.
117. If Mr. Maitland had not refused you a summons, and told you he had no jurisdiction, and recommended you to go into the Supreme Court, you never would have done it, and would not have lost your stock? No, I would not have done it. I would not have lost my stock certainly.
118. Have you seen Mr. Rae, the Registrar of the Mines Department, lately? Yes.
119. Will you tell us what the conversation was between you and Mr. Rae with respect to the registration of those mining tenements? I accused Mr. Rae of writing a certain letter that I had seen a copy of with Mr. R. D. Meagher. I accused Mr. Rae of writing this letter, and told him that it was false. Mr. Rae stated that he had got the information from Mr. Maitland, who ought to know whether it was false or not.

W. Reid.  
26 Sept., 1900.

120. Would you tell us what the information was? It was to the effect that the Bank of North Queensland were the registered holders or had a registered lien on certain mining tenements really the property of the Goodradigby Company.
121. Mr. Rae showed you a letter he had sent to Mr. Meagher? Yes; he admitted that it was a copy of a letter he had sent to Mr. Meagher.
122. *Mr. Maitland.*] You know that I was a newcomer to the district;—that was the first time you had ever seen me when you saw me in Queanbeyan? I never saw you until I saw you in Queanbeyan.
123. You knew I had just come to the district, and was a complete stranger to the district when you saw me the first time? Yes; I had not known you long.
124. In fact, it was the first time I had come into Queanbeyan at all? I cannot say that.
125. You know that Braidwood is 50 miles from Queanbeyan? About that.
126. And you knew I attended at Queanbeyan every month to hear cases? Yes.
127. You knew the day on which I came—I think the fourth Tuesday? Yes; I took the opportunity of meeting you, knowing you would be there, and I wanted you to appoint a day to hear the summons.
128. You met me, you say, in the street;—did you not meet me under the court-house verandah the first time? No.
129. Did not Mr. Helm, the Clerk of Petty Sessions, introduce you under the verandah? I do not remember that occasion.
130. You came to me, and I think we had some little conversation outside, and afterwards went inside? No; I remember distinctly where I met you—between the court-house and the post-office, on the side of the street.
131. You came to me, I think, and said, first, you wanted my advice about a case? No; that was not so. I did not come to you for advice about a case.
132. Did I not tell you that, as the case was likely to come before me, I could not advise you? No, not at all.
133. Then did you not tell me that you did not want my advice in that way, but only wanted to know a suitable course to get before the Warden's Court? No such conversation occurred.
134. You did not tell me anything about the case at all? I certainly told you about the case—that I wanted you to grant a summons, or to appoint a time to hear a summons against the Bank of North Queensland.
135. Is that all I heard about it? I may have told you more about it, but I have no recollection.
136. You say "No" so positively;—if you do not remember, say you do not remember? I told you, no doubt, the circumstance that the Bank of North Queensland had agreed to put me into possession of certain mining tenements at once, and they having failed to do so the mine became lost to me, and was utterly valueless, and I wanted to bring them into the Warden's Court, and I asked you to appoint a day to hear the summons. That is about all I did say to you.
137. Did I tell you that, as mining tenements and freehold land were so much mixed up, and there were so many outside matters, I thought it was more a case for equity;—do you remember my telling you that, inasmuch as the freehold and the mining tenements were so much mixed up, and also matters hardly relevant to the case, such as the conduct of the Goodradigby Company, and the conduct of the Bank and Davidson? I have no recollection.
138. *Mr. Colonna Close.*] Did it ever occur? No; it could not have occurred without my knowing.
139. *Mr. Maitland.*] Then I did not tell you I thought it was more a case of equity? You advised me to go to the Supreme Court—that your Court had no jurisdiction.
140. I advised you that it was more a case for the Supreme Court? Yes.
141. *Mr. Cook.*] Did Mr. Maitland say why he advised you to go to the Supreme Court? No, he did not. I had the Mining Act, and showed him it was his duty to let me go to the Warden's Court.
142. *Chairman.*] Did Mr. Maitland say why he advised you to go to the Supreme Court? Because I could not go into the Warden's Court—that the Warden's Court had no jurisdiction.
143. *Mr. Maitland.*] Did I not say something similar to this: "Do not depend upon my advice, but go and see a solicitor?" I do not remember your saying that.
144. You do not, you are quite sure? I am quite sure you did not advise me to see a solicitor.
145. You did not see a solicitor afterwards? I did; but you did not advise me. I went to a solicitor to compel you to do your duty.
146. What solicitor did you go to? Mr. Downing, who afterwards went to you.
147. What advice did Mr. Downing give you? He first of all told me I had a good case, but before issuing a summons he would go and see you.
148. Do you know Mr. Downing's writing? No, I do not—I could not swear to it.
149. If Mr. Downing says, "I told Reid I considered he had no case in the Warden's Court, but should go to the Supreme Court," is that correct? After he had seen you he told me that I had no case for the Warden's Court—that it was entirely a case for the Supreme Court. But previous to seeing you he told me differently.
150. How do you know he saw me at all? He told me. He left me to go and see you.
151. That was your solicitor's advice—that there was no case for the Warden's Court? Yes; the solicitor told me that I would have to go to the Supreme Court.
152. I believe you were dissatisfied with the advice? Yes, I was.
153. After you had some little conversation, did Mr. Downing say to you, "If you wish it, I will test the matter in the Warden's Court"? No. I had nothing further to do with Downing. I was guided by the Mining Act. I believed that you and Downing were both wrong.
154. *Chairman.*] Did Mr. Downing say, "If you like, I will test the case in the Warden's Court"? I do not remember that.
155. You will not swear whether he did or not? No, I will not.
156. *Mr. Maitland.*] What was put up for sale at Queanbeyan? Mining tenements.
157. What was put up for sale? When are you alluding to?
158. When you bought—what did you buy at Queanbeyan for the £700? I agreed to purchase all the mining tenements specified by the auctioneer as belonging to the Goodradigby Company.
159. Did you buy the freehold? Paterson, who claimed to be the owner of all the mining tenements formerly held by the Goodradigby Company, agreed to sell to me.
160. All the mining tenements? All the property owned by the Goodradigby Company.

W. Reid.  
26 Sept., 1907.

161. Did it include the freehold? No; that previously belonged to me.
162. Did you or did you not buy the land, some 410 acres, at Brindabella and mining tenements? That was all included.
163. Were the terms of sale these: "W. Reid purchases all the right, title, and interest of the Goodradigby Gold-mining and Sluicing Co., from the mortgagees, the Bank of North Queensland, including land, tenements, &c., also all plant and belongings in connection with the same, now held under bill of sale by Mr. M. B. Shaw, for the sum of £700; £200 deposit to be paid forthwith to Messieurs A. M. Delhunty & Co., the balance in five years with interest payable at 6 per cent., and secured by mortgage on all the property now purchased, possession to be given at once." Those were the terms of sale? Yes.
164. Did you pay this £200? I was prepared to pay it.
165. Well, did you pay it? Yes.
166. Did you pay it forthwith? They would not give me a transfer. I was prepared to pay it, but I could not induce the Bank to go to the court-house and give me a transfer.
167. But had you the amount at all? Yes. I deposited a cheque in the bank, which I can prove by the bank clerks.
168. But when did you pay this money? After I had called upon Delhunty, who was the Bank's agent, and asked him to give me a transfer. He told me he had no instructions to do so, and could not give me a transfer until he was appointed by the Bank of North Queensland to do so. I then took the cheque to the bank and placed it there, waiting Mr. Delhunty's pleasure, or that of the Bank.
169. You say you had £200? Yes; I had a good cheque for £200.
170. Is it not a fact that your solicitor, Davidson, found the £200? It is a fact that I borrowed the £200 from him.
171. You had not £200 to put down at the time? No. I was giving security for £200.
172. You borrowed this money from Davidson? Yes.
173. And was not the security you offered a second mortgage on this property? Yes.
174. I suppose you know it would be impossible to have a second mortgage unless the first had been executed? Yes.
175. Is it not a fact that Davidson would not advance you this money until the documents were prepared for signature? No, that is not a fact; his letters will show that is not a fact.
176. You do not know as a fact that the Warden does not issue summonses? I know for a fact that the Warden appoints a time for hearing summonses.
177. But do you not know as a fact that the Warden has a particular day, which is arranged from one year's end to the other, on which to hear cases of that sort;—you know I had a particular day to attend Queanbeyan Court? I met you there.
178. You know the Police Magistrate attends the court on a particular day, and, therefore, has no need to fix a day to hear a summons? I know the Warden's Courts are separate from other courts. The Warden appoints a time most suitable to himself to hear the cases in the Warden's Court, and whatever time suits him we have to get a summons for.
179. Your case came on on the usual court day—the day I always went up there—on a Tuesday? You appointed a time for hearing the case.
180. It came on on my regular court day;—there was no appointed day except what was appointed from one year's end to the other? I understood you appointed a time for hearing the case.
181. *Mr. Cook.*] Mr. Maitland asks, did this take place on his ordinary visiting day? I cannot say that.
182. *Mr. Maitland.*] I think you know also that I attended at Bungendore, as well as at Queanbeyan? Yes.
183. And after finishing the court there, I came on to Queanbeyan? Yes; I believe you did.
184. That was my usual course;—I always came that way? I do not know.
185. When the case came on, there were two assessors sitting? Yes.
186. Do you remember who they were? I cannot remember their names now.
187. I believe that your party objected to two of the number who were called, and anybody you objected to was struck out? I objected to MacAlister's son.
188. And a man named Falkner? MacAlister was the only one I challenged.
189. Of course, your solicitor could challenge anyone he liked? I told him to challenge MacAlister.
190. You were represented by Mr. O'Brien? Yes.
191. He is, I believe, looked upon as one of the most able men in the southern district by the public generally? I can only say I am very sorry I met him.
192. You have not issued any warrant against him? I would have liked to have implicated him.
193. You went into the box yourself, and gave a large amount of evidence? My evidence is all down.
194. You had a full opportunity of saying all you wanted to say? I was guided by my solicitor, and had not a full opportunity.
195. Do you remember your solicitor objecting to a certain document because it referred not only to the mining tenements but also to the freehold land? I have no recollection of that just now.
196. Mr. Baxter Bruce appeared for the Bank? Yes.
197. And I think he called some clerk—Sly and Hamilton's clerk, I fancy it was—some lawyer's clerk; at any rate? Not to my knowledge.
198. He produced a large number of letters;—do you not remember a large number of letters were produced? From Sly and Hamilton.
199. I think so? There were a large number of letters put in.
200. Did not the tenor of the whole of those letters urge Paterson to complete this very transfer? I did not look at the letters, but I saw them put in.
201. As far as you remember, the tenor of the whole of these letters was to urge Paterson to complete your matter? I do not remember now. I know there are copies of all those letters in the court to-day, and they can be obtained.

TUESDAY,

## ON THE CASE OF WILLIAM REID.

TUESDAY, 9 OCTOBER, 1900.

Present:—

MR. NIELSEN,

MR. THOMAS.

W. A. HOLMAN, Esq., IN THE CHAIR.

Mr. E. L. Maitland appeared in person.

William Kessell, Record Clerk, Department of Justice, recalled and further examined:—

202. *Chairman.*] Do you produce some papers? Yes; the depositions in the case of Reid v. Davidson and Reid v. Patterson, heard at the Queanbeyan Police Court in 1895.

W. Kessell.  
9 Oct., 1900.

William Reid recalled and further examined:—

203. *Mr. Maitland.*] What did you buy from the Bank? Mining tenements is what I actually agreed to purchase.

W. Reid.

204. What did you actually buy? That was all I had any occasion to buy. The grass right belonged to me already.

9 Oct., 1900.

205. What did you buy? The mining tenements.

206. You swear positively you bought nothing but the mining tenements? Yes; I swear positively I did not buy anything but the mining tenements. The grass right I had never sold.

207. I hold in my hand Exhibit "H" in the case of Reid v. Davidson, which is the original contract of sale signed by Davidson and A. M. Delhunty & Co., as agents for the vendors, the Bank of North Queensland; is this your signature? Yes.

208. You see by that contract of sale that you purchased all the right, title, and interest of the Goodradigby Company in certain lands and tenements? Yes; I think you understand that; but it requires explanation to the Committee. The Supreme Court verdict established my right to the surface of the land. I had never sold or offered for sale the surface right to the land. I sold or agreed to sell to the Goodradigby Company the mining purpose only. I therefore had nothing to purchase back but the mining tenements.

209. You heard these conditions of sale—what you bought for £700; "mining" tenements are not mentioned in these conditions of sale at all? Yes; tenements are.

210. Not "mining" tenements, but lands and tenements? Tenements.

211. *Mr. Nielsen.*] Seeing that this matter came before the Warden's Court, would not those tenements necessarily mean mining tenements? Yes.

212. *Mr. Maitland.*] I understand that this mine was on part of your freehold land, was it not? No.

213. Was it mining tenements? Certainly.

214. On Crown lands? Yes.

215. Was the mine on freehold land? No; on Crown lands.

216. It was held by you in what way? By virtue of a miner's right.

217. What was the nature of the tenements? A number of tenements.

218. But how did you hold it—as block claims or extended claims? A number of water rights, and also mining tenements consisting of sluicing claims.

219. *Chairman.*] The mine was not on the freehold land? The mine was not on the freehold land. I had agreed to sell to the Company for mining purposes, giving them permission to follow the gold through the whole of the freehold land, but reserving the surface right to myself. I had never sold or offered for sale the grass right. The lead of gold was running through my freehold land.

220. But had it ever been worked? A portion of it, but not on the freehold land.

221. Whatever work has been done, it has been on land not your property? Not on the freehold land.

222. Whatever workings exist are off your property? Yes; on the mining tenements.

223. *Mr. Nielsen.*] Did you have a proper registered title to the mining tenements? I had originally, but I transferred it to the Goodradigby Company on certain terms and conditions.

224. But you originally held a proper registered title for the land we are dealing with now? That is so.

225. A proper mining title, I mean? Yes, that is so.

226. *Mr. Maitland.*] You have seen the conditions of sale [Exhibit H]; these are correct? Yes, that is correct.

227. The conditions of sale were, I believe, that the sum of £200 was to be paid forthwith? Yes, that is stated in the conditions of sale.

228. And immediate possession was to be given? Yes.

229. Have none of your solicitors advised you what would be the meaning of "immediate possession" under those circumstances? I did not require the advice of a solicitor for that; I was guided by the Mining Act.

230. Do you not know that "immediate possession" means possession immediately after you have fulfilled your part of the contract? I cannot understand you.

231. You have to pay £200 forthwith, and after that you get immediate possession; do you not understand that "immediate possession" means possession immediately after you have fulfilled your part of the contract? I was prepared to pay down the £200, but I could not induce Mr. Delhunty to go to the Court-house and give me a transfer.

232. Do you not know that "immediate possession" means possession immediately after you have fulfilled your part of the contract, or rather, in this case, immediately after you had paid the £200? I know that a transfer means through registration.

233. What is the meaning of "immediate possession" in a case of this sort, the terms being £200 cash and immediate possession to be given? I cannot be in possession without being put in possession through the Warden's clerk, and registered as such.

234. *Chairman.*] You were under the impression that "immediate possession" meant immediate possession without any prior conditions? I knew it was necessary for Mr. Delhunty, who was appointed agent, to go to

- W. Reid. to the Court-house and there put me in possession through the Warden's clerk. I was prepared to pay down my £200, but before doing so I asked Mr. Delhunty to go over and give me a transfer, which he told me he was not authorised to do.
- 9 Oct., 1900.
235. Pending what? Pending his being appointed agent by the Goodradigby Company, or the Bank of North Queensland.
236. Did he say he would give you a transfer as soon as you put the money down? No, he did not.
237. That was not the point at all? No; but as soon as he was empowered by the Bank of North Queensland to do so.
238. *Mr. Maitland.*] Davidson and Johnson were your solicitors in this matter? Yes, unfortunately they were.
239. They acted in your behalf in seeing the title was correct, I believe;—they examined the title for you, did they not? They were instructed by me to see the title was correct.
240. Davidson was, I believe, afterwards convicted of some offence? I believe he was.
241. *Chairman.*] Were Davidson and Johnson partners? Yes.
242. *Mr. Maitland.*] The case against Mr. Johnson was dismissed? I do not remember about Mr. Johnson.
243. You ultimately got all you purchased from the bank, did you not? I got the transfer seven months after I had made the purchase.
244. *Chairman.*] Had any proceeding taken place meanwhile? No.
245. Had you paid the £200 meanwhile? Immediately the transfer was given to me, I paid the £200.
246. *Mr. Maitland.*] Did you pay this £200 yourself at any time? Yes.
247. Did you personally pay it, or did Davidson and Johnson pay the £200? I tendered the money to Delhunty myself, in his office.
248. But did you pay it yourself personally, or was it paid by Davidson and Johnson? I do not understand the question.
249. Did you pay the £200 yourself personally? Yes.
250. *Chairman.*] By your own hands? Yes, I paid it into Court with my own hands, as soon as I got the transfer.
251. *Mr. Maitland.*] I think you said you had no money at the time you purchased this property; you have told us already you had no money of your own? I have to thank others for that.
252. Had you or not? I had sufficient money to develop the mine if I could have got possession of it by transfer.
253. *Chairman.*] What sum do you call sufficient? I had about £150. I had mortgaged some other property.
254. But you wanted that for developing the mine? Yes.
255. *Mr. Maitland.*] Did you, yourself, pay this £200 you got from Davidson and Johnson, or did they pay it? I paid it myself upon getting the transfer.
256. To whom did you pay it? To Delhunty & Co., as agent for the Bank.
257. *Chairman.*] Did you pay it to Mr. Delhunty himself? Yes, it was paid in the Court-house.
258. By you to him? Yes; and I then got a transfer of the mining tenements.
259. *Mr. Maitland.*] Was Mr. Johnson, of Davidson and Johnson, present at the time? I do not think so.
260. *Mr. Nielsen.*] That is the usual way in which mining tenements are transferred—to go to the Court and pay the money, and then get a transfer as a receipt? Yes, that is so.
261. *Mr. Maitland.*] How long did you have the £200 before you paid it? I cannot say; but I had it a considerable time. I called on Mr. Delhunty with a cheque in my hand, and he said he had not been authorised to transfer to me, and I then took the £200 away and placed it in the bank.
262. Which bank? The Commercial Bank at Queanbeyan, awaiting the pleasure of the Bank of North Queensland, and to give me a transfer.
263. You say you tendered this money to Mr. Delhunty himself? Yes.
264. To him only? He was the agent appointed by the Bank, or someone else, put me in possession.
265. Do you know a man named Edward Charles Harris, who was constantly in the office? Yes.
266. Did you ever tender it to him? I believe he was present. I think he was in the office when I tendered the money, and, also Mr. Schumack, another clerk.
267. Harris is a friend of yours I believe; cannot you remember whether he was there or not? Yes, Harris was present, and I believe Schumack also.
268. You swear positively that Harris was there? Yes. I am speaking now of Delhunty's office, not of the Court-house.
269. This is Mr. Harris's evidence taken at the Warden's Court, Queanbeyan, on the 8th October, 1895. —“I never heard of Reid tendering the deposit of £200 before January, 1892. I cannot remember Reid saying anything about damages to the property to the time of the transfer. He only complained of the delay as to putting in possession. I understood he was in actual possession.” Do you remember that evidence being given? Yes; I do well.
270. Now, you remember what Harris swore, and you have made a mistake? No.
271. You think, then, Harris has made a mistake? Yes; I believe he has made a mistake.
272. Harris at that time, in 1892, I believe, was a sober man and a good clerk? He has not a very good reputation as being a sober man in Queanbeyan.
273. *Chairman.*] Was he a man of intemperate habits in 1892? He has always been addicted to drink. He may keep straight for some time, but cannot trust himself.
274. *Mr. Maitland.*] Mr. Harris was chief clerk to Mr. Delhunty? Yes.
275. *Chairman.*] And, as far as you know, a respectable man? Yes; excepting that he went in for drink.
276. *Mr. Thomas.*] Was Harris called in this case as your witness or against you? He was a witness for me.
277. *Mr. Maitland.*] Mr. Delhunty's chief clerk, the man who really managed the business, knew nothing about your tendering this £200? So he has stated there.
278. You got a transfer for all the property you purchased, did you not? I have already answered that question.
279. You gave the Bank a mortgage over something; what was this mortgage over? They took security over the property.

W. Reid.  
9 Oct., 1900.

280. What property? The freehold land.
281. What freehold land? 300 acres of freehold land, and 80 acres of conditionally purchased land.
282. But was not that the land included in the conditions of sale? Yes.
283. And the mortgage was to secure the £500 balance? Yes.
284. Did you give the Bank of North Queensland any lien at all over the mining tenements? No.
285. Did they ask you for any lien over those tenements? No.
286. You gave Davidson and Johnson a second mortgage over this freehold property to secure the £200, did you not? Yes.
287. Did they ask you for a lien over these mining tenements, or did you give them one? No; they took a second mortgage on the property the Bank had a mortgage over.
288. They did not ask for a lien over these mining tenements, and you did not give them one? No, certainly not.
289. Which were the more valuable—the freehold or the mining tenements? The mining tenements.
290. How is it they did not ask you for any lien or mortgage over them? Because they did not have any title, in the first place.
291. Davidson and Johnson neither asked for nor did they receive any lien or mortgage over the mining tenements? Not from me.
292. Notwithstanding that they advanced you £200 on a second mortgage on this land, they did not ask you for any further security at all? Davidson told me they were quite satisfied to take a second mortgage on the freehold and the conditional purchase of 80 acres.
293. *Chairman.*] So neither the Bank nor Davidson and Johnson asked for a mortgage over the mining tenements? That is so.
294. And Davidson and Johnson secured themselves by a second mortgage over the freehold? Yes; and the 80 acres conditional purchase.
295. *Mr. Maitland.*] This freehold land, I believe, is some 40 miles from Queanbeyan? About 45 miles.
296. A most inaccessible place to get at? You can go in there with bullock teams with 30 cwt. on them.
297. Is it rich land—cultivation—or ordinary grazing land? More for mining purposes; that is what took me there.
298. *Chairman.*] What sort of land is the conditional purchase? Good grazing land.
299. *Mr. Maitland.*] Would land in a position like that be worth £1 an acre, or anything like it? Yes. With a mine going alongside of it, it would be worth very much more.
300. Was not the real cause of delay in the matter this: You had no money to pay this £200; you had to borrow £200 from Davidson and Johnson, and before they would advance you this money the documents had to be prepared so that they could get security in the shape of a second mortgage? That was not the cause of the delay.
301. Perhaps you will tell us what the cause of the delay was? The cause of the delay was that Mr. Delhanty had no power to give me a transfer, although he had previously agreed to do so.
302. *Chairman.*] You say that he had no power;—do you mean that he was not duly authorised or that his principals were not in a position to do it? That he was not duly authorised by the Bank of North Queensland. He was waiting instructions from the Bank of North Queensland before he could put me in possession.
303. That is all you know? That is what he told me.
304. *Mr. Maitland.*] You say you had the money ready at any time to put down? I had arranged for the money before agreeing to purchase.
305. I call attention to Exhibit “K” in the case of Reid v. Bank of North Queensland—a letter from the Bank of North Queensland to Davidson and Johnson, solicitors, Goulburn, dated 18th September, 1891 [*letter read*];—would you say that letter is incorrect? I am entirely in the dark about these letters; I never saw them, and they were written without my instructions.
306. This letter was written by the Bank’s solicitors to your solicitors? Well, I never saw it.
307. It was produced in court and read to you? There were a lot of letters there, but they were Latin to me; I did not understand them.
308. Do you say that is incorrect? Yes.
309. Messrs. Sly and Hamilton are a respectable firm of solicitors, and would hardly write a deliberate lie like that, would they? I do not know.
310. I would also refer you to a second letter, dated 4th November, 1891, from Henry A. Hamilton to Messrs. Davidson and Johnson, relative to “The Bank of North Queensland to Reid, and Reid to the Bank of North Queensland” (that would mean the transfer and the mortgage), Exhibit “N” in the same case, Reid v. Bank of North Queensland [*letter read*];—you heard that letter read in court? Yes; but these letters were Latin to me at the time; I did not understand them.
311. Did you give the Bank of North Queensland any notice that you were going to commence an action against them? I consulted my solicitor, with a view of taking action against them.
312. *Chairman.*] Did you give the Bank notice? Well, I instructed the solicitor to take action against the Bank.
313. *Mr. Maitland.*] Which solicitor? Davidson and Johnson.
314. After the transfer? Yes.
315. The transfer was in 1892, and you came to me in 1895;—did you give the Bank any notice through your solicitor between 1892 and 1895? I complained by letter very bitterly to the Bank for not putting me in possession, and causing me the loss of the property.
316. *Chairman.*] After January, 1892? After I was in possession.
317. You wrote and complained of their delay in putting you in possession? Yes; and I said I had been ruined by the delay. I complained about five months after I had been put in possession.
318. Did you get an answer to that letter? Yes.
319. In what terms? The bank manager stated that he considered I had been already in possession.
320. *Mr. Maitland.*] I suppose you are the only man living at Brindabella? No.
321. Are there more than you? Yes. There were 100 men living there at the time the mine was being worked.
322. I mean when you purchased at the sale, in June, 1891;—how many people were at Brindabella then? There were three residents at Brindabella about the time I purchased the mining property.

- W. Reid. 323. You were virtually in possession of the ground—you were on the ground and living there and working the mining tenements, to a certain extent? I was there as a trespasser on the mine, not being able to get a transfer.
- 9 Oct., 1900. 324. You worked it to a certain extent, I believe? No; I could not work, for that reason—I could not legally work.
325. What was to prevent you from issuing a summons against the Bank in the Warden's Court to have the tenements declared abandoned? You prevented me.
326. I am speaking of the period between the sale and the transfer? I was daily expecting to be put in possession by the Bank. I was receiving letters from my solicitor saying that the Bank was not ready, but would do so as soon as certain things were done. They killed three months through the mortgage deed not being signed.
327. Now come to the time when you saw me in Queanbeyan;—you say you did not give anyone notice that you were going to commence an action against the Bank—not even the Bank themselves, but wrote them a letter complaining only? Mr. Davidson was aware of it.
328. *Chairman.*] When did you first determine to take action against the Bank? It was when I fully discovered the fraud.
329. Never mind about that;—when did you actually take action against the Bank—what year; was it 1895? In October, 1895, the case came on for trial; but in May, 1895, I applied to Mr. Warden Maitland for a summons against the Bank, which was refused.
330. *Mr. Maitland.*] From June, 1892, till May, 1895, did you give the Bank or anyone else any notice that you intended to commence an action against the Bank for damages? No; I do not know that I did.
331. Can you not be certain whether you did? I remember that I complained bitterly to both Davidson and the Bank about the delay in the transfer.
332. But did you threaten the Bank with an action, or tell anyone you were going to bring an action against them? Probably I may have done; I cannot remember clearly.
333. A man going to commence an action for £5,000 generally remembers it? I had not suffered the loss of £5,000 until the head water was completely cut off. Then I could estimate the amount of damage I had suffered, but not until then.

WEDNESDAY, 10 OCTOBER, 1900.

Present:—

MR. COOK,  
MR. MEAGHER,

MR. NIELSEN,  
MR. RICHARDS,

MR. THOMAS.

W. A. HOLMAN, ESQ., IN THE CHAIR.

Mr. Colonna Close, instructed by Mr. A. C. Roberts, appeared as Counsel for Mr. Reid.

Mr. E. L. Maitland appeared in person.

William Reid further examined:—

- W. Reid. 334. *Mr. Maitland.*] What time did you see me in Queanbeyan;—when was the first time we met? I have not taken notes of the time, and cannot speak accurately.
- 10 Oct., 1900. 335. Did we have a long or short conversation? I really do not remember when we first met in Queanbeyan. Do you mean when we met at the Warden's Court with regard to a summons. Which time do you refer to?
336. I mean the first time we met? When I applied to you for a summons?
337. I say you did not apply to me for a summons; but I want to know when was the first time we met? I had often seen you on the Bench and in the street, but I do not recollect having any conversation with you until I asked you for a summons.
338. Did you not see me prior to the 25th May? Certainly not. I did not meet you as Warden of the district.
339. You remember the Bywong Rush? I remember reading about it; but I do not know when it occurred, and cannot say whether that was about the time we first met.
340. You do not recollect how long we talked on the first occasion that we met? I think it was pretty nearly half an hour.
341. I think you have said that when we first met you referred me to the Mining Act? I had the Act in my hand, and showed you a particular clause.
342. What clause? I do not recollect just now. You told me you knew all about the Mining Act, and knew your duty.
343. What clause did you show me? I really cannot state the number of the clause from memory, but I could find it in the Act if I had it.
344. Do you recollect what it had reference to? Yes; the Mining Regulations and the duty of a Warden.
345. You carried a copy of the Act with you, did you? I believe I did.
346. You carried it 40 miles? I believe so. It was a copy of De Courcy Browne's "Miners' Handy Book."
347. But that relates simply to mining tenements, and not to a Warden's duty at all? It gives the fullest information in connection with mining matters.
348. You have already said that I did not at that time advise you to see a solicitor? No; you distinctly refused to issue a summons.
349. Did you see me afterwards;—after you had seen a solicitor? No; I did not see you again on these conditions.
350. *Chairman.*] Not on that date? No.
351. Not a second time on the same day? No; but Mr. Dowling went to see Mr. Maitland.
352. *Mr. Maitland.*] Did you tell Mr. Dowling that I refused to issue a Warden's Court summons? Yes.
353. Will you swear that positively? Yes; I will swear it positively.
354. There is no mistake about it? No; there is no mistake about it.

355.

355. Did not Mr. Dowling, as your solicitor, tell you that you had a perfect right to a summons, notwithstanding anything that I might say? I do not know whether those were the exact words used; but I think he told me that I could go to the Warden's Court, and I think he said that he would go and see you.

W. Reid.  
10 Oct., 1900.

356. Did he not say that, if I refused a Warden's Court summons, you could get a writ of mandamus, and compel me to give you one? No; he did not advise me to that effect.

357. Did you make any complaint to the Warden's clerk then, or at any time afterwards, that I had refused you a Warden's Court summons? I cannot recollect if I did it; but the Warden's clerk wrote to the Mines Department, through Mr. O'Sullivan. I consulted him, and asked him to report to Mr. Maitland.

358. You employed Mr. Levien afterwards in some Supreme Court case? Yes.

359. Did you complain to Mr. Levien that I had refused you a Warden's Court summons? I believe I did, but I cannot swear positively.

360. You say you wrote to the Department of Mines? Yes.

361. Did you write personally? I have a book-keeper who does my correspondence.

362. And you swear that either you or your book-keeper wrote? Yes.

363. What were the contents of the letter so far as you remember? It was through Mr. O'Sullivan that I wrote.

364. You did not write the letter yourself? No; I wrote to Mr. O'Sullivan, and asked him to report Mr. Maitland to the Mines Department.

365. *Mr. Colonna Close.*] You did not write to the Mines Department? No.

366. *Mr. Maitland.*] Have you no copy of the letter you wrote to Mr. O'Sullivan? I think that could be found if I had time to hunt it up.

367. Did you get a reply from the Mines Department through Mr. O'Sullivan? Yes.

368. And what did you do when you got that? That reply was to the effect that I should go back to the Mining Registrar.

369. For what purpose? To get him to issue a summons that had previously been refused by you.

370. That is the Warden's clerk you went to? Yes.

371. Did you ask him to fix any date for hearing this matter? No; I asked the Warden's clerk to communicate with you to fix a date.

372. You do not remember what his reply was? No.

373. He did not reply to the effect that there was a regular day fixed for these hearings? No, he did not.

374. Who wrote out the summons? I believe the Warden's clerk.

375. Did you see Mr. O'Brien prior to the summons being issued? Certainly I did. Do you mean who filled the summons in?

376. Yes? That is the duty of the Warden's clerk.

376½. I think you applied for assessors to hear the case? Yes.

377. And your solicitor objected to one or more of the assessors who were sitting? Yes, I instructed him to challenge McAlister.

378. Do you recollect who the assessors were? I only knew McAlister.

379. Do you not know that one was Thomas Alston? I think that was one of the names, but they were all perfect strangers to me.

380. You cannot say that one was not Thomas Alston? I believe that was the name of one.

381. And another was Jack Wilson? I cannot swear positively that it was.

382. Do you recollect a man named Giles who had a claim near Coolgardie? I have heard the names of Wilson and Giles, but do not know either of them.

383. The case after being heard by myself and two assessors was dismissed, I believe? That is known for a fact.

384. *Mr. Cook.*] You had no objection to any but McAlister? No, I felt that McAlister was an interested party.

385. Why did you not make any objection as to the assessors' action? I hardly know how to answer that question.

386. You have made certain complaints that I have dealt wrongly with you;—why did you not make any complaint as to the action of the assessors? I do not know.

387. You had no complaint to make against the two assessors? What was the use; I certainly could not object to them then, I could not challenge them on the Bench, and had no power over them.

388. If I acted wrongly in the matter, these men who sat with me must also be implicated? They were like dummies; they did not open their mouths; they did not ask me whether I had a miner's right or not.

389. *Chairman.*] Then may we say that you imagined Mr. Maitland responsible? Yes.

390. You think he was responsible, and the assessors were not? Yes.

391. *Mr. Maitland.*] It was an unanimous decision? You stated so from the Bench.

392. Was the finding of the Court this: "The Warden's Court finds that the complainant has failed in the evidence, and, further, that he has failed to produce evidence as required by the 19th section of 37 Vic. No. 15"? I believe so.

393. You stated yesterday that you had tendered £200 for the property on several occasions? Did I say on several occasions?

394. I think so? I tendered a cheque for £200 on one occasion, and on several occasions I stated that I was prepared to deposit £200.

395. How was it that in the Warden's Court at Queanbeyan you never stated that? My solicitor was accountable for all that occurred in that Court; I was never asked.

396. You say in your evidence, "I made a tender of the deposit of £200 to Mr. Dulhunty immediately after the sale"? Yes; I considered that I tendered the money when I said I was prepared to pay it at once. I only had to wire to Mr. Davidson for the money. He had an understanding with me that the money would be forwarded as soon as I applied for it. They were quite willing to take the cheque when they got it afterwards.

397. When did you get this cheque from them? As soon as I found out they were prepared to put me in possession.

398. When was this? Some six or seven months after the date of sale.

399.

- W. Reid. 399. You swear positively to that? I received the cheque some time previous to the transfer, and put it in the bank for safe keeping.
- 10 Oct., 1900. 400. I asked you about the cheque yesterday, and you stated positively that you had on several occasions tendered a cheque? No, I cannot say that.
401. *Chairman.*] You mean to say that you had not the cheque in your hands? I several times stated that I was prepared to pay the money down when they were prepared to effect a transfer;—but they would not come to the Court-house and get a transfer, and I then went with the cheque.
402. When you went with the cheque did they give you a transfer? No, I had to take the cheque away.
403. The agreement of sale was that £200 was to be paid forthwith and possession given? Yes.
404. Were you not in possession? No, certainly not.
405. But you were occupying the land, you could do what you liked with the mining tenements? No, I was a trespasser for one month.
406. You were there by permission of the Bank? No, the Bank had no power to give me possession.
407. But you were there, were you not? Yes, I was there, certainly.
408. But was not a trespasser against anyone but the Bank? I should be looked upon under the Mining Act as a trespasser.
409. Were you a trespasser against anybody but the Bank? I do not understand the question.
410. Could anyone but the Bank have sued you for trespass? Yes, the Crown could, the Government could.
411. Did you know who was the registered owner then? I was lead to believe that it was the Bank of North Queensland.
412. What led you to believe that? By their stating that they were the registered owners, and by their putting up the land for sale as mining tenements.
413. *Mr. Maitland.*] I think you stated last Wednesday that you did not know why the Warden's Court dismissed your case against the Bank of North Queensland? I do not remember.
414. *Chairman.*] Do you remember saying that you did not know why the case was dismissed? I have no recollection of it—why the case was dismissed.
415. *Mr. Maitland.*] I think after the case was dismissed your solicitor made some statements to you. I think you said Mr. O'Brien said something like this:—"It is my fault; we will have them next time," or something to that effect? Yes, I cannot remember the exact words, but that is the effect of them. I will say that when I heard Mr. Maitland referring to the 19th section of the Mining Act, which has reference to miners' rights, I was in the act of taking the miner's right from my pocket when I was pulled back by the coat by Mr. O'Brien, who, at the same time, remarked, "it was my bloody fault; never mind, we will have them next time."
416. Do you know why the case was dismissed? You said from the bench that it was dismissed under the 19th section of the Miners' Act, and for the non-production of the miner's right.
417. You heard the whole of the finding read out? Well, I was guided by my solicitor, and to some extent I was powerless.
418. Then you say you heard the whole of the finding, which was that you had failed on the evidence? Yes.
419. What meaning did that imply to you? I really do not know what you are driving at.
420. *Chairman.*] Did you hear the whole of the judgment read from the bench, that you had failed on the evidence, and also because of the non-production of the miner's right? I did not take particular notice of the first part of the finding, nor until I heard about the miner's right.
421. But you do not deny that the first part of the finding was read from the bench? I believed at the time that I was being slated wholly on the question of the miner's right.
422. *Mr. Maitland.*] Have you told various persons, Members of Parliament and others, that the case was dismissed because of the non-production of your miner's right;—have you given any other reasons for the finding? No, I do not think I have; it is not likely I would.
423. *Chairman.*] Was there any Press representative at Queanbeyan in the Court at the time? I believe so.
424. Was it usual for the proceedings of the Warden's Court to be reported in the Press? Yes.
425. *Mr. Maitland.*] That was the case against Mr. Patterson. You state in your evidence: "I afterwards brought an action in the Warden's Court against the Bank of North Queensland; it was owing to Mr. Davidson putting in certain forged letters that I lost the case,"—do you recollect saying that? Yes.
426. You say that your sole reason for bringing this matter forward was that the case was dismissed in the Warden's Court because of the non-production of your miner's right, and yet you have sworn in Court that it was dismissed because Mr. Davidson produced forged letters? Yes.
427. *Mr. Thomas.*] Do I understand you to be referring to this particular case, which you say now was dismissed through the non-production of a miner's right? It is the same case, but I was aware at this time that Mr. Davidson had put in certain letters.
428. *Mr. Maitland.*] You have stated time after time that you had this cheque for £200? You have asked that question half-a-dozen times.
429. Is it not a fact that this cheque was sent to you by Mr. Davidson and Mr. Wilson on the 21st December, 1895? Yes.
430. Therefore you really had not the money to offer these people until some days subsequent to the 21st December? Yes, I could have got it at an hour's notice. That was the understanding I had with Davidson.
431. Your solicitors accepted the Bank's title to what they sold under the conditions of sale? I do not know, the trouble was about the transfer.
432. *Mr. Colonna Close.*] You do not know anything about your solicitors accepting the Bank's title as a good one? No.
433. *Mr. Maitland.*] Did you write to your solicitors urging the matter on; and they forwarded certain documents for your signature? I am speaking of the transfer of mining tenements.
434. They forwarded certain documents for your signature? Yes.
435. Have you been advised by Mr. Close, or your other legal advisers, that a Warden's Court has no power to inquire into the question of misrepresentation of title when the title has been accepted by your solicitors? I have not been so advised.

436. You afterwards got a summons against Mr. Davidson for obtaining certain securities by means of false pretences? Yes. W. Reid.
437. I believe the case was thoroughly gone into, and you gave evidence before certain magistrates? Yourself included. 10 Oct., 1900.
438. No? Against Davidson.
439. Against Davidson? Yes.
440. This was the case Reid v. Davidson. It was virtually a case of obtaining goods under false pretences? Yes.
441. And the magistrates were Messrs. Gale, Wright, and Ball? Yes.
442. And both Mr. Gale and Mr. Wright were Members of Parliament? I believe so.
443. The matter was fully gone into, I believe, and you and your witnesses gave evidence? Yes.
444. And what was the result of the case? Mr. Davidson was acquitted without a stain on his character.
445. And the Bench also made pretty strong remarks about the case? In what way.
446. Saying there was no foundation for the charge; did they make any remarks? The only remark that I can remember them making was that they acquitted him without a stain on his character.
447. You afterwards applied for a warrant against Mr. Patterson, the manager of the Sydney branch of the Bank of North Queensland? Yes.
448. And a warrant was refused? Yes.
449. By whom? By you. I first of all applied for a summons, and obtained it.
450. You obtained the summons, and it was sent away for service? Yes.
451. Afterwards it was, I believe, returned. It could not be served as Mr. Patterson was not a resident in the Colony? That was not the reason given in Court.
452. The summons was not served because Mr. Patterson was residing in Queensland? It was well known that he was living in Queensland.
453. Why was the summons not served? It was stated that Mr. Patterson could not be found. Mr. Davidson said he could be at any time.
454. Have you any information from the Department of Justice as to why the summons was not served? No.
455. Were you not advised by any Government official to get a warrant? No; I do not remember that. I remember applying for one on my own account. I, first of all, asked for an extension of time for the service of the summons.
456. But what led to your making an application for a warrant afterwards? I was refused an extension of time for the service of the summons, and then I applied for a warrant.
457. Without advice? On my own judgment.
458. You then applied for a summons, and I believe a certain day was appointed on which to make the application to the full Court? For a summons.
459. *Chairman.*] To whom did you apply for a warrant? To Mr. Maitland. I first of all applied for an extension of time for serving the summons, and that being refused I applied for a warrant.
460. To Mr. Maitland? Yes. Mr. Davidson came up to oppose it.
461. *Mr. Maitland.*] To whom did you apply for an extension of time for the service of the summons? To you personally.
462. You say, you applied to me for a warrant? You refused an extension of time for the service of the summons, and also refused to grant a warrant.
463. *Chairman.*] Where did you apply to Mr. Maitland for that? I applied in open court.
464. *Mr. Maitland.*] After you had been refused an extension of time for the service of the summons, how long was it before you applied for a warrant? You were on the Bench and you refused the warrant.
465. You say you applied for an extension of time for the service of the summons, when did you apply for it, before or after you applied for the warrant? The same day in open court.
466. You applied for a warrant in open court? Yes.
467. And your depositions were taken down? Yes.
468. And the Bench unanimously refused to grant a warrant? Yes.
469. There were three other gentlemen on the Bench besides myself, I believe? I believe there were about three others. There were Mr. Bull, Mr. Gale, Mr. Lazarus, and Mr. Maitland.
470. And the Bench unanimously declined to issue a warrant against Mr. Patterson? Yes, there was more than that.
471. *Chairman.*] Were those the same gentlemen who were on the Bench when you brought a case against Davidson? Yes. Mr. Gale and Mr. Bull were on the Bench when I brought that case against Mr. Davidson.
472. After the case I made some strong remarks, did I not? Yes.
473. In my report to the Department of Justice I made this remark, as having been uttered by me from the Bench—"I asked the magistrates to treat further applications, if any, of Mr. Reid, in connection with the above matter, with the greatest caution"? Yes, some words to that effect.
474. That was after the conclusion of the case? Yes.
475. In 1897, that is some two years afterwards, you applied to Mr. Thomas to issue a warrant against Mr. Patterson? I applied for a warrant against Mr. Patterson, but I do not think it was so long afterwards. I had previously been refused by all the other magistrates.
476. And he issued the warrant? Yes.
477. Did you give Mr. Thomas any information about a warrant having been refused you prior to that? Yes, I told him that a warrant had been previously refused.
478. Was the warrant issued? Yes; he said he would issue the warrant, notwithstanding that you had instructed other magistrates not to issue one.
479. After the warrant was issued, what became of it? I would very much like to know myself what became of it.
480. You do not know what became of it? No, I do not.
481. Did you not make any inquiries of Mr. Thomas? No, I inquired from the Minister of Justice.
482. Did you not inquire from Mr. Thomas what became of it? No, I do not think so.
483. You wrote to the Department of Justice to know why the warrant had not been put into execution? Yes.

W. Reid.  
10 Oct., 1900.

484. And what answer did you get? That the decision lay with the Magistrate.
485. Did you get a letter from Mr. O'Sullivan, which was written to him by the Department of Justice, to the effect that the discretion lay with the Magistrate in refusing to execute his warrant, and he appears to have exercised that discretion wisely? Yes.
486. I believe these men—Mr. Wright, Mr. Gale, Mr. Bull, and Mr. Lazarus—have no animus against you? No, I cannot say that they have.
487. Do you blame them for dismissing this summons against Davidson, and also for refusing to issue a warrant? I certainly blame them for refusing to issue a warrant when I ought to have obtained it.
488. *Mr. Colonna Close.*] That is the warrant you afterwards obtained? Yes.
489. *Mr. Maitland.*] About these mining tenements;—do you say that I stated that they were registered in Sydney? I positively say you did.
490. You say you have the Mining Board Regulations;—do they not instruct you where to register the claim? I do not know what you are driving at. The Mining Act does.
491. Where are mining tenements registered? As a rule, in the local place.
492. Did I not tell you that the mortgage was recorded in Sydney? What mortgage?
493. [I do not know what mortgage;—it is a matter that has escaped my memory as being on these Brindabella properties? No mortgage was mentioned.
494. Where did the conversation take place? In the Magistrate's room at Queanbeyan.
495. I think I ought to explain to you how your case came before Mr. Thomas. I tried to show you that you were still acting under a misapprehension or something of that sort? I asked you how it was the Bank of North Queensland were allowed to claim the mining tenements, they not being the registered holders; you then told me they were registered in Sydney.
496. *Chairman.*] Did you take any action afterwards? I was then made bankrupt.
497. And on the strength of your hearing this, did you write to Sydney? I did. I went, in company with Mr. E. W. O'Sullivan to the Mines Department, and he asked the question for me, and the reply was that they were not registered, and never were.
498. How long was that after the conversation with Mr. Maitland? Shortly afterwards; two or three weeks. Mr. Maitland referred me to Mr. Gould, who was then Minister for Justice.
499. What did he say? He said Mr. Gould would tell me, if I did not like to believe him.
500. You are sure it was after the conversation with Mr. Maitland? Yes; positive. His object was to make me believe that the Bank of North Queensland were the registered owners of the mining tenements at Brindabella, that they were not locally registered, but were registered in Sydney.
501. This mine was of considerable value? Yes.
502. How do know it? From experience.
503. What experience? Thirty years' experience in mining.
504. But you are a poor man still, I believe? I have to thank you for a good deal of it.
505. Tell us how you judged the value of the mine at the time of the sale, or at the time the action was brought? From previous results.
506. *Mr. Maitland.*] What were the previous results? Well, when I had water, I made as high as £20 per week.
507. Was that in 1864? More recent than that. I can show you receipts for all the gold I have obtained there.
508. At the times the terms of sale were made out was there any evidence of the value of the mine? When water is gone the mine is no value.
509. But how do know that this mine was of any value? From the amount of gold that has been obtained by me and others.
510. How many companies have worked it? Two.
511. What was the name of the first one? The Brindabella Gold-mining Company.
512. Did they make anything out of it? Yes.
513. What became of them? They floated it again and called themselves the Goodradigby Company.
514. Did the Goodradigby Company ever declare any dividend? I think not.
515. They virtually went bankrupt without anything? No, they called up £12,000; they spent about £5,000 in connection with the mine. They got £500 worth of gold. They spent £5,000 out of the £12,000 which they called up after the sale of the property, and obtained the deeds of my freehold of the land.
516. *Mr. Colonna Close.*] What was done with the balance of £5,000? I do not know. I did not get any of it.
517. Did not Mr. Slee inspect this property? Not to my knowledge.
518. Who inspected it? There has been a Mr. Etheridge, Curator of the Museum; and Mr. Arnold has inspected it on behalf of the syndicate.
519. Did Mr. Milne inspect it at any time? Yes.
520. Do you know what his report was? He recommended that I should get assistance from the Government and try and bottom it.
521. *Chairman.*] Did you get the assistance? I got some, but not sufficient to enable me to bottom it.
522. *Mr. Maitland.*] What is the bottom, alluvial drift? Yes.
523. *Chairman.*] You say you handed over the deeds of this property to the Goodradigby Company? Yes.
524. How did that happen? They offered me certain terms and conditions if I handed the whole of this property over to them as a mining property; the gold was supposed to run right through, being alluvial.
525. You undertook to do that and become a shareholder? Yes; I held one-tenth of the whole thing, about 500 contributing shares and about 900 fully paid-up shares.
526. Then you parted with the land, but not the grazing right? Not the grazing right.
527. You have said several times that a Supreme Court verdict secured you the grazing right;—in what action was that verdict obtained? An action brought against the Goodradigby Company by me for non-fulfilment of the agreement; my grazing-right was substantiated in the course of that action.
528. That was prior to all the other actions you have spoken of? Yes.
529. And was before you had undertaken to buy back the property at all? Yes.
530. The history of the case is this, then: Mr. Wright sold the property to the Goodradigby Company, but they failed to comply with the terms of sale;—what did they fail in? To pay me in cash.
531. They did not pay you? Yes.

W. Reid.

10 Oct., 1900.

532. And you brought an action against them which secured you your grazing-right? Yes.
533. *Mr. Colonna Close.*] How often did Mr. Maitland come and preside as Police Magistrate at Queanbeyan? About once a month.
534. Every time he came, did he also come as a Warden;—was a Warden's Court also held? It was not very often that a Warden's Court was held.
535. Therefore, you did not know when a Warden's Court would be held and asked him to appoint a time for one? No.
536. Mr. Maitland, it appears, came monthly to Queanbeyan;—each time that he came was a Warden's Court held? I believe not.
537. Was that the reason you asked him to appoint a time for holding a Warden's Court, and told him you intended to get a summons? Yes.
538. Is it a fact that no other conversation occurred on the occasion of your asking Mr. Maitland to appoint a time for holding a Warden's Court, that he merely refused to appoint a time, advised you that he had no jurisdiction, and told you to go to the Supreme Court? No; there is no doubt about that.
539. When you went to Mr. Dowling, and told him your case, did he say you had a right to go into the Warden's Court? Yes.
540. But when Mr. Dowling returned from seeing Mr. Maitland, he then told you the Warden's Court had no jurisdiction? That is so.
541. Did Mr. Maitland say a single word about your not depending upon his advice, but to go to a solicitor?
542. Is it not a fact that you applied over and over again to Mr. Dulhunty for a transfer of these mining tenements to you, and Mr. Dulhunty told you they had not got instructions from the Bank of North Queensland? Yes.
543. Was not that told to you over and over again? Frequently.
544. And Mr. Dulhunty was acting as agent for the Bank of North Queensland? Yes.
545. With regard to this tendering of the cheque, is it not a fact that according to the terms of sale you were to be put in possession of these tenements, and contemporaneously you were to pay over the £200? Yes.
546. And you were ready at any time with the £200 to pay the moment the transfer was signed? Yes.
547. Did you happen to know, as a matter of fact, that if you worked more than a month you were liable to a serious charge according to the Act, and also that the mine would be regarded as abandoned if you had not been registered as the owner? Yes.
548. Was that the reason you did not go on working after the month had expired? Yes.
549. The £200 you had to pay as deposit you borrowed from Mr. Davidson on the understanding that there was to be a second mortgage? Yes.
550. And the papers which Mr. Maitland spoke of as being put before you by Mr. Davidson were virtually the second mortgage which he required you to sign? Yes.
551. And there were no other papers in the way of deeds, or anything like that, of the second mortgage on the mining tenements for security for the advance of the £200? On the freehold land and mining tenements, and all rights of the Goodradigby Mining Company.
552. Tell me this, how many times have you been at a Warden's Court where assessors have been sitting with the Warden? I do not know that I have ever attended a Warden's Court when assessors have been sitting before.
553. You never saw assessors sitting before? No.
554. Did you notice at all whether the Warden turned to talk to the assessors, or whether they turned to talk to him, during the hearing of this case? I do not believe they did once.
555. The Court was virtually in the hand, solely and entirely, of Mr. Maitland? Yes.
556. And, so far as you know, the assessors did not know they had power almost equal to Mr. Maitland's? I do not think they opened their mouths once.
557. With regard to the summons that you applied for against Mr. Patterson, who was present in Court different from those who were present when you applied for a warrant—or did you apply for a summons and warrant at the same time? Mr. Patterson did not appear in answer to the summons.
558. Not being able to serve the summons you then applied for a warrant? Yes.
559. Was it on the occasion of the application for a warrant that you alleged that Mr. Maitland gave a caution to the rest of the Magistrates not to grant you a warrant? Yes; on that occasion.
560. *Chairman.*] That was on the occasion of the application for a warrant? Yes.
561. Was that application made on the date of the return of the summons, or was it later on? On the date of the return of the summons. I first of all applied for an extension of time for the service of the summons; the bench would not grant that, and I applied for a warrant, then and there.
562. On a sworn information—did you swear an information, and then apply for a warrant? I merely asked for a warrant.
563. Tell me this: you were asked whether you regarded Mr. O'Brien as one of the ablest men in the southern district;—is it a fact that he is regarded as the ablest man in the southern district? No; it is not.
564. Do you happen to remember whether the letters produced at the trial before the Warden's Court were virtually letters of Messrs. Sly and Hamilton, who were acting for the official liquidator, Mr. Smith, who was virtually acting for the Bank? Yes.
565. Acting wholly and solely in the interests of the Bank? Yes.
566. Is it not a fact that, so far as you can remember, those letters spoke only of the freehold, and not of the mining tenements at all? Yes.
567. Have you ever been in a Warden's Court when an action has been brought for damages? I cannot remember; I have heard disputes in the Warden's Courts.
568. But you cannot remember whether you have heard any disputes but disputes about wages? No; they were generally jumping disputes.
569. Have you ever known, in all your experience of a Warden's Court, of a case being allowed to go on until a miner's right had been asked for and produced? No; never.
570. Were you informed by Warden Maitland that the Bank of North Queensland was registered in the Local Court as owners or as mortgagees of this property? In the Sydney Court.

- W. Reid.  
10 Oct., 1900.
571. From whom did you hear that they were registered in the local court? From the Mining Registrar in Sydney.
572. And within two or three weeks after having heard from Mr. Maitland that they were registered in Sydney, you came down to Sydney for the sole purpose of making inquiry in consequence of what he told you, and you came for no other reason? Yes.
573. Did you find that they were not registered as he told you? Yes.
574. Did you hear from the Under Secretary for Mines or the Registrar that the Bank of North Queensland were registered as owners of the mining tenements and mortgages in the local court? Yes.
575. Did he inform you who told him that? Yes.
576. Who did he say told him that? Mr. Maitland.
577. Then Mr. Maitland misinformed you with regard to the registration in Sydney, and Mr. Ray misinformed you with regard to the registration in the local court? Yes.
578. In the *Queanbeyan Observer*, dated Friday, 13th December, 1895, appears this report of what the Warden said: "The Bench refuse to grant a warrant. This is a gross attempt to obtain criminal proceedings when, if there is a claim at all, recovery should be made by civil action. The whole proceedings are of a most iniquitous character. He hoped that in future magistrates would use extreme caution in entertaining any applications from Mr. Reid for the issue of summonses or warrants. He would take care that a copy of these proceedings should be sent to the Minister for Justice;"—Is that a correct report of what Mr. Maitland said on the Bench on that occasion? Yes.
579. And what he now says here is absolutely incorrect? Yes.
580. Did you lose anything else except your stock, your property, in consequence of the advice of Mr. Maitland? Yes; I lost another selection of 220 acres.
581. How came you to lose that? I had mortgaged it in order to raise funds to develop the mine after I had purchased it. Not having been able to get the transfer, I lost the whole of the property.
582. The mortgage was foreclosed? Yes.
583. Did you receive a letter from Mr. O'Sullivan, who received it from Mr. Harrie Wood, Under Secretary for Mines? Yes.
584. Is this the letter [*Letter shown to witness*]? Yes.
585. The letter read thus: "95-15,516. M. Department of Mines and Agriculture, Sydney, 31st August, 1895. Sir,—With reference to your inquiries respecting the suing of the Bank of North Queensland, in the Warden's Court, by Mr. W. Reid, of Brindabella, I have the honor to inform you that the Warden reports that he informed Mr. Reid that he did not think the Warden's Court was the proper place to commence his action. He, however, sees no reason why he should not commence proceedings in the Warden's Court, if he feels so disposed. I have the honor to be, sir, your obedient servant, Harrie Wood, per R.H.O. E. W. O'Sullivan, Esq., Parliament House, Sydney." How did that letter come into your possession? I received it from Mr. O'Sullivan.
586. *Mr. Richards.*] In connection with the first interview you had with Mr. Maitland, did you quote to him the clause in the Mining Act to cover your action in the Warden's Court? Yes.
587. Do you remember whether you quoted the clause, or showed him the clause in the Act? I quoted the clause, I think.
588. Did you have a solicitor after that? Yes; I went immediately afterwards and consulted Mr. Dowling.
589. What did he advise? That I could go into the Warden's Court. He went to get Mr. Maitland to appoint a time to hear the case, and advised me to sit in his office until he came back.
590. After seeing Mr. Maitland, what did Mr. Dowling advise you to do? He advised me that I could not go into the Warden's Court.
591. That was your solicitor's advice? Yes; Mr. Maitland informed me of that.
592. With regard to the newspaper report which has been read. I think you said that one of the Justices who heard your case was a Mr. Gale, is that the same gentleman who was the proprietor of the newspaper? Yes.
593. Was he his own reporter? Yes, at that time.
594. And he was seated on the Bench? I think he had a reporter in the court.
595. Are you sure he had a reporter in the court on that occasion? I cannot say positively, but I believe he had.
596. Had you an opportunity afterwards of learning whether the Bench was unanimous or not? In that decision?
597. Yes? No, I went by the paper.
598. Would you be surprised to learn that it is recorded in one of these documents that the Bench—that is, the three magistrates—was unanimous? I believe they were unanimous.

Edgar Hamilton Ray sworn and examined:—

- E. H. Ray.  
10 Oct., 1900.
599. *Mr. Colonna Close.*] What are you? Registrar of the Mines Department.
600. Do you remember any occasion on which you saw Mr. Reid at the Mines Department? Yes, I have seen him on several occasions during the last few months—since June.
601. Will you tell us what was the cause of seeing him? He came to me to make inquiry with reference to some information which I had given to Mr. Bethune, who was represented to be his agent.
602. You know what this case is about? Yes.
603. Can you tell us the first occasion on which he came to you with respect to getting any information he wanted or which you gave him in connection with this case? I cannot tell you the exact date, but it was, as far as my memory serves me, about July.
604. Can you tell us the conversation that took place? Mr. Reid has been with me sometimes for an hour. I endeavoured to explain to him the position of the case as far as I could gather it from the papers.
605. Did you on any occasion tell Mr. Reid that the mining tenements at Brindabella were in the hands of the Bank of Queensland as mortgagees? Yes.
606. Did you then tell him that they were not registered in Sydney either as mortgagees or owners? I said not in our Department in Sydney; they might be registered elsewhere.
607. That is what you told him with regard to Sydney? Yes.

608.

608. Did you tell him that you had heard from Mr. Maitland that they were registered in the local court in Queanbeyan? I did not; I swear I did not.
609. Did you tell him anything about their being registered anywhere else but Sydney? I told him that if there were liens under the Mining Regulations they might possibly be registered in the local office.
610. Did you not tell him that if the Bank were owners they would necessarily be registered in the local court? No, I did not.
611. Did you tell him about the fact of what would be done if they were the owners? I told him, as far as my memory serves me, that it was merely a bankers' lien.
612. Did you know that the bank could not enter into any terms or any agreement for selling their right, title, and interest to these tenements having that lien? I know nothing whatever about that.
613. Then do I understand you to say, in the first place, that, if registered, it would be registered in the local court only in the district in which the mine is situated? It might be so, if the bank chose to register it.
614. But I am asking you, if it is registered, whether it should not be registered in the district in which the mine is situated? I do not exactly understand what you mean.
615. Do you not know that the owners of all these mining tenements are registered in the Local Warden's Court in the district in which they are situated? I do not like to go so far as that; mining tenements should be registered in the local court, but whether they are all so registered I cannot say.
616. But I want to know from you, as an officer of the Mines Department, whether they should not, as a matter of course, be registered in the local court? I will not say that, I say that mining tenements and holders of such tenements should be registered in the local court.
617. When did you see Mr. Maitland in regard to this matter? I think I saw him the day before the Select Committee sat for the first time.
618. Where did you see him? In the office.
619. Did you know he was coming to see you? No.
620. Did you not know he was coming down to attend this Select Committee? No, I did not know it at that time.
621. When did you first know that? When I saw him for the first time in the office.
622. What was the conversation that took place? As far as I recollect no conversation took place with regard to the Brindabella matter. We shook hands.
623. Do I understand you to say, on your oath, that no conversation took place between you when he came in to see you? I will not undertake to say.
624. Then I understand you to swear that, although he came down specially in regard to this case of the Brindabella Mine, you had no conversation with him about it? On that day, yes.
625. How did you know for what purpose he had come down? I asked one of the officers of the Department what the Warden was down for, and he told me.
626. You know Mr. Maitland well? I think I have spoken to him four or five times.
627. And rather than ask him what he came down for you preferred to go to one of the officers? I suppose so.
628. Had you any conversation with him about this case? On the day the Select Committee sat.
629. Will you kindly tell us what the conversation was about? I cannot say that I can. I believe it had reference to some précis of letters—something of that sort—nothing of any great importance.
630. I mean anything connected with the case not important at all? Nothing, except in connection with the précis.
631. Then you consulted him about something that had to be put in evidence? I asked him about a case that a précis had to be made of.
632. I want you to tell me, so far as you can remember, what was the conversation between you and Mr. Maitland on the day on which you came here to give evidence? There was no conversation, with the exception that the précis was to be prepared.
633. No conversation connected with this case? Nothing whatever, that I can remember.
634. Will you on your oath swear that? Yes.
635. You are very sorry you did not give evidence that day your time was so precious? I cannot say that.
636. Your time was not precious, though you occupied the position of Registrar;—did you see him subsequently? Not since that day.
637. You swear you have not seen him since that day? I swear that I have not seen him since that day.
638. Did you write any letter to Mr. Bethune concerning this case? I did.
639. Have you got a copy of that letter? I have.
640. Have you got it with you? Yes.
641. Will you show the Committee the letter? Certainly.
642. You say that you informed Mr. Bethune that the Bank of North Queensland held a lien over the property;—how did you know that? From the papers.
643. What papers? Papers that were in possession of the Department. I believe they are before the Committee.
644. That was the only means by which you knew that the bank had a lien over the property? Yes; I know absolutely nothing about the case.
645. Now can you tell me the date? It was some time about June.
646. Was it not the 6th June, 1900;—up to that time I understand you to swear that you had no information outside the papers which you say were in the Mines Department? Nothing whatever.
647. Will you tell me upon what assumption or basis you came to the conclusion that Mr. Reid had really no claim to compensation? I gathered it from the papers.
648. How did the papers show you that Mr. Reid had no claim to compensation? I gathered it from the papers. The matter came before the courts, and therefore it was a matter for the courts to decide.
649. Did you not say that you decided, as a court sitting by yourself, that you, as an officer of the Mines Department, conveyed to an outside source information which Mr. Bethune had no right to whatever? As agent for Mr. Reid, I think he was entitled to it. Mr. Reid has admitted that Mr. Bethune was his agent.
650. Then I understand that you gave an opinion to some person who might have been in some way called as a witness and of your own volition told him that Mr. Reid had no claim to compensation? That is what I told him as my opinion.

E. H. Ray.  
10 Oct., 1900.

- E. H. Ray. 651. What did you base your opinion on? The papers that are now before the Committee.
- 10 Oct., 1900. 652. Can you tell me in any possible way what single paper there is before the Committee that would justify you in saying that Mr. Reid had no claim for compensation—can you in any possible way give me a synopsis of any single paper that would justify you in coming to such a conclusion? The case has already come before the Court.
653. Do you happen to know that the Bank of North Queensland submitted to be charged with fraud and with the fact rather than allow the matter to come on in Court? I do not know.
654. The Bank of North Queensland had absolutely submitted to be charged with fraud and deceit rather than allow the case to go through on its merits, and took advantage of a technical plea; and you, as an officer of the Mines Department, cannot say on what you based your conclusion that Mr. Reid had no claim to compensation? Only from the papers.
655. Is this what you wrote to Mr. Bethune:—"My dear Bethune,—*Re* the mine at Brindabella, near Queanbeyan. Since our conversation I have had an opportunity of going through the departmental papers. To give you a complete history of the matter would take a long time, and the result would be of very little use to you. Briefly, however, the mine consists of seven tenements held under the Mining Boards Regulations of the colony, and known as extended alluvial claims. They were worked by means of sluicing, and the tenements include water rights for supplying the water necessary to work the claims. They were originally taken up by W. Reid and others and transferred by these people to the Goodradigbee Gold Mining and Sluicing Company. This Company apparently were in difficulties from the start, and the Bank of North Queensland held a lien over the property. On the 15th October, 1890, Reid took action against the Company in the Circuit Court, at Goulburn, and obtained a verdict with costs amounting to £483 18s. 3d. The Bank immediately operated under their mortgage and the property was put up for sale at auction at Queanbeyan, on the 22nd June, 1891. Reid appears to have been persuaded to purchase the property; by this proceeding he may possibly have lost the £483 18s. 3d. for which he obtained a verdict. This is, as far as I can gather, his complaint. There are, of course, many side issues leading up to this, and a number of Court cases have taken place in connection with transfers and other matters. As far as I can gather, Reid has no claim for compensation; in fact I regard his case as a trivial one. A select committee could really do him no good. His chief complaint appears to be against the Warden of the district, but as far as I know this officer gave him every possible assistance in the matter. As between ourselves I cannot advise you to spend any money in connection with this matter. Yours, &c."? Yes; that is my memorandum.
656. Is it correct that these tenements were originally taken up by Reid and others, and transferred by them to the Goodradigbee Gold Mining and Sluicing Company? Yes; I gather so from the papers.
657. In what sense do you mean that Mr. Bethune should not spend any money in connection with the matter? Mr. Bethune informed me that it would be necessary to pay Mr. Reid's expenses if he came down, and the matter would be of very considerable expense.
658. Is it part of your duty to advise people outside as to what they should or should not do if it involves expenditure of money? It is my duty to give all possible advice that I can.
659. What I want to know is this: Is it a part of your duty to advise all those who call in to spend no money in connection with mining? If they think fit to take my advice; certainly.
660. Then it is part of your duty, as an officer connected with the Mines Department, to advise people outside whether they should or should not take up a mine? If they like to ask my advice.
661. But is it a part of your duty? To give all possible advice is my duty.
662. Whether the mine is a paying mine or not? That is a matter I cannot touch.
663. Here you are absolutely giving advice with regard to possible or non-paying tenements to private persons outside Departments, and you advise some person not to spend any money in connection with the matter, because you consider another person is not entitled to compensation? I advised him as Mr. Reid's agent.
664. Then I understand that your opinion was gathered from the papers, which showed you that he got a verdict for £483? My opinion was gathered from the whole of the letters.
665. Was your opinion that he was not entitled to compensation founded on the fact that he had got a verdict of £483, which the Bank of North Queensland, by taking possession of the property, deprived him of? No.
666. Was that the reason why you came to the conclusion—because he got a verdict, and never got the result of the verdict—that he had no claim to compensation? Certainly not.
667. Then, on what ground did you come to the conclusion that he had no right to compensation? From the evidence in front of me in the papers.
668. A précis of which papers is contained in this letter to Mr. Bethune? That is a brief account of it.
669. *Chairman.*] Did you come to the conclusion that Mr. Reid had obtained his full rights to the mine, or did you hold that he had not obtained his full rights? It was from no default of the Government, certainly. That is the conclusion I came to, and that the case should be fought out in the Courts. The case was not known to the Department. As near as my memory serves me, there must have been a lapse of three, four, or five years before the case was brought under notice by Mr. Reid himself writing to ask if certain documents were registered.
670. *Mr. Colonna Close.*] Is it usual for the Mines Department to know the cases that are going on, and to have reported to them these cases in the various mining districts of the Colony? That depends on the nature of the cases. There are certain cases—the cases of leased lands, for instance—which are usually reported to the Warden's Court; but cases connected with the holding of miners' rights are dealt with by the Warden, and are not reported to the Department.
671. Was the result of this case communicated by the Warden to the Mines Department, that is the case heard before Warden Maitland, *Reid v. Bank of North Queensland*? I do not remember that.
672. Would a case like that be reported to the Mines Department? I do not think it would be, unless specially asked for.
673. You speak here of an epitome of certain facts you obtained which caused you to come to the conclusion you did? Yes.
674. Was one of the reasons because Mr. Reid got a verdict for £483, which he virtually did not get, and because he did not get the result of that verdict. Is that the reason? I cannot answer the question in that way.
- 675.

675. What conclusion did he come to—because he got a verdict for £483, but never got the results of that verdict—on what grounds would that justify you in saying that he was not entitled to any compensation? I did not take that ground at all. E. H. Ray.  
10 Oct., 1900.
676. That is not one of the grounds for your conclusion? I will not say that.
677. *Chairman.*] You never thought that the fact that Mr. Reid got a verdict was a ground for concluding that he had no right for compensation? Certainly not. I formed my conclusion on the case as a whole.
678. *Mr. Colonna Close.*] I ask you is it that you wish to exclude that as being one cause of your opinion, or do you wish to say that it was only an incident? I wish to say it is impossible for me to answer any one of these reasons as a particular reason for anything.
679. Do not misunderstand me. You say it was upon the whole of the reasons that you founded your conclusion—There were four reasons, and no one of those four reasons would justify you in coming to the conclusion you did? I cannot say that.
680. The Bank held the whole of the property under mortgage and put it up for re-sale—was that a reason for your conclusion? That and others.
681. Was it an incident that induced you to come to the conclusion? Yes; I have no hesitation in saying that, from the papers in front of me, I was justified in coming to the conclusion that Mr. Reid had no title to compensation.
682. When you say in your memorandum, "As between ourselves," was that between you, as an officer of the Mines Department, and Mr. Bethune, or between you, as a private individual, and Mr. Bethune? As an officer of the Department. When I wrote that letter to Mr. Bethune about a fortnight after he asked me if I had any objection to his handing it to a certain Member. I said, not the slightest; there is nothing private or secret about it.
683. Would you receive Mr. Reid in the same way? Yes. I am sure he will admit that I have spent hours with him. He wanted me to contradict one statement—that the mine was sold by the Bank. There is no doubt it was sold, and there is no doubt that Mr. Reid purchased it.
684. I understand that you cannot swear, on your oath, that Mr. Reid is not entitled to compensation? I cannot.
685. When was your last interview with Mr. Reid? I am not quite certain.
686. What was the conversation at the last interview as far as you can remember? The subject of conversation on every occasion was the one thing; Mr. Reid wanted me to contradict a certain statement put in the letter.
687. Did you contradict it? I told him I was unable to do so.
688. What is the position of the Registrar in the Mines Department;—is it to deal with all claims? He deals with all leases in the Colony, deals with all correspondence affecting registration, and attends to the public.
689. You are virtually Sub-registrar? No; I am the Registrar; everything is in my charge.
690. *Mr. Maitland.*] A Warden has similar duties to yours in regard to matters in the way of giving advice? Certainly.
691. I take it that you know as a matter of fact that advice at times is given to hundreds of men on a field;—sometimes not to go to law, and other matters? Certainly.
692. As far as mining tenements are concerned, you have nothing to do with them? Nothing whatever.
693. You simply register the leasehold? That is so.
694. How long is it since you first saw Mr. Reid? I think I said sometime in July or August this year.
695. Have you heard in the Department, in any way, that I was ever accused of refusing a Warden's Court summons to any one? No.
696. Such a thing never came to your knowledge? No. [*The letter of Mr. Harrie Wood was here shown to witness.*]
697. Have you ever seen that document before? I cannot say that I have. It is written from the Ministerial Branch. It would emanate from the Under-Secretary.
698. You have read that letter;—what would you understand from it? That Mr. O'Sullivan had written to the Department asking for information in connection with this matter, and this was Mr. Wood's reply.
699. Would you glean from this letter that Mr. Reid had been refused a Warden's Court summons? No; certainly not.
700. *Mr. Thomas.*] You would not have that opinion? No.
701. *Mr. Maitland.*] There have been insinuations made that you and I had conversations? I think I passed your room when the door was open, and I think that Mr. Reid was with you. We shook hands and then I passed on.
702. Has Mr. Reid ever complained to you that a Warden's Court summons was refused him? Well, I think he did.
703. Do you remember Mr. Reid coming to you and stating that I had informed him that certain documents were registered in Sydney? Yes; he did say that.
704. When was that? During the conversation in July or August last. I think Mr. Reid made an inquiry to that effect. I think I told him, after looking the matter up, that they were not.
705. *Chairman.*] Did you ever have an interview with Mr. O'Sullivan about Mr. Reid's case? No.
706. He never saw you? No; he probably saw the Under-Secretary.
707. This conversation with Mr. Reid then was entirely in the present year? Yes; I do not think I ever saw Mr. Reid before July or August of this year.
708. Then, if Mr. Reid made any inquiry before then, it was probably made to Mr. Wood and not to you? Yes; I never saw him until that date.
709. *Mr. Maitland.*] You were Registrar then? Yes; I have been Registrar for ten years.
710. *Chairman.*] Is it possible for a property to be sold by one party and to be registered by another? It should not be so.
711. *Mr. Colonna Close.*] Is it not one of the rules of the Department that all liens must be registered? All liens should be registered.
712. *Chairman.*] Under the general law or special regulations? Under the regulations.
713. Suppose a party of men working at a gold-field like, say, Condobolin, and they became indebted to the local storekeeper, and he takes a lien over their interests, would that be registered? It should be registered; but they are frequently not. They are frequently satisfied to take this lien as a common law lien. I am not thoroughly conversant in the way in which banks do business. They generally advance on a security, and when the mortgage becomes due they can realise on the security.

TUESDAY, 16 OCTOBER, 1900.

Present:

MR. COOK,  
MR. NIELSEN,MR. RICHARDS,  
MR. THOMAS,

MR. HURLEY.

W. A. HOLMAN, Esq., IN THE CHAIR.

Mr. Colonna Close, instructed by Mr. A. C. Roberts, appeared as Counsel for Mr. Reid.  
Mr. E. L. Maitland appeared in person.

William Richard Collis, Clerk-in-Charge of the Leases Branch, Department of Mines, sworn and examined:—

- W. R. Collis. 714. *Chairman.*] Do you understand the object of this inquiry? I know nothing about it.  
715. It has not been brought under your notice officially? No, not officially.  
16 Oct., 1900. 716. Would the case of a lease at Brindabella, near Queanbeyan, come under your notice in the ordinary course? The case of an application for a lease would  
717. Have you any knowledge of an application for a lease by a Brindabella Mining Company, near Queanbeyan? I have no recollection of it.  
718. Have you had any opportunity lately of looking up the history of the case? No; I have not looked up the case at all. I understand that the holding is under a miner's right. That would be under the Mining Board Regulations. We, in my section of the Department, would have no knowledge of that, unless there was some clashing of title with a gold-mining lease application.  
719. Are you in a position now to give the Committee any information as to the early history of the case? No. As far as my memory goes, I do not think I ever saw the papers. I could not tell without looking at them whether they have ever been brought before me. I have no recollection of the matter. I hand in a letter from Mr. O'Sullivan to the Department, dated 4th June, 1895, and Mr. Maitland's report thereon, dated 6th June, 1895; and comments thereon by Mr. Harrie Wood, late Under Secretary for Mines, dated 22nd August, 1895; and a further report by Mr. Maitland, dated 29th August, 1895. These are the original documents. [*Documents read.*]

William Reid recalled and further examined:—

- W. Reid. 720. *Mr. Colonna Close.*] Is there such a word as "immediate" in the terms of sale;—is not the expression used therein "possession to be given at once"? Yes; those are the words.  
16 Oct., 1900. 721. Did you understand from that that your payment of the money forthwith should be on condition that you should obtain possession contemporaneously? I clearly understood that.  
722. Do you happen to know how long the mortgage given by you to the Bank of North Queensland was before the property was transferred to you at all? About four months.  
723. Was it in consequence of this bogus mortgage that they were enabled to make you bankrupt? That was really the cause.  
724. You were asked a question (286): "You gave Davidson and Johnson a second mortgage over this freehold property to secure the £200, did you not?";—there was no other security that you gave them? Not to Davidson and Johnson. They took no security over the mining property.  
725. What security did you give to Davidson and Johnson for the £200 they advanced to you? They agreed to take a second mortgage over the same property as the Bank's first mortgage was on.  
726. Was there any other security you gave? Not to Davidson and Johnson; not that I am aware of.  
727. You were asked by Mr. Maitland some questions with respect to letters put in from Sly and Hamilton in connection with the case before the Warden's Court;—do you happen to know that those letters referred only to the freehold and the conditional purchase? Yes.  
728. You were also asked by Mr. Maitland (Question 300): "Was not the real cause of delay in the matter this: you had no money to pay this £200; you had to borrow £200 from Davidson and Johnson, and before they would advance you this money the documents had to be prepared so that they could get security in the shape of a second mortgage?";—is it not the fact that you were prepared, from the date of the terms of sale, or within a few days, to pay the money the moment the transfer was made? Yes.  
729. Did you know that you were entitled to have that land for a month only, and no longer, without transfer? Yes.  
730. Did you know that anyone after that could jump it? Yes.  
731. Did you also know that you were liable to penalties if you were in possession after that month without transfer? Yes.  
732. You were asked (Question 408) by the Chairman: "But you were not a trespasser against anyone but the Bank?" I do not exactly understand that, but according to what I have read you were there simply without having any right to be there at all, according to the Act of Parliament? That is all.  
733. At Question 422, Mr. Maitland asked you: "Have you told various persons, Members of Parliament, and others, that the case was dismissed because of the non-production of your miner's right;—have you given any other reasons for the finding?" That was the principal reason.  
734. Was that, according to your impression, the only reason? Yes.  
735. *Mr. Cook.*] Have you been fighting this case for the whole of the last five years;—how is it you have only now got to this stage? I have been all the time—I believe for more than five years—trying to get a Committee to inquire into the case.  
736. How is it you have not succeeded before; the matter was mentioned in the House only last year, I think, for the first time? I think I can show you that Mr. O'Sullivan moved four or five years ago for a Committee to inquire into this matter.  
737. You have been fighting it all the five years? Yes; I have been trying to get redress.

738.

738. And you say that Mr. O'Sullivan first put a motion on the Business Paper, asking for a Select Committee, as far back as three or four years ago? Yes; I think more than that. I asked Mr. O'Sullivan to ask for a Committee to inquire into the reason why a warrant issued for the arrest of A. J. Paterson was cancelled. W. Reid.  
16 Oct., 1900.

739. *Mr. Maitland.*] You remember you saw me after the case in Queanbeyan was decided, when you say I told you that a certain mortgage or lien was registered in Sydney? The mining tenements you said were registered in Sydney. You told me that in the Magistrates' room in Queanbeyan.

740. Do you remember who was the Sergeant of Police in the Queanbeyan Court at that time? Sergeant McGuire was in the Court-house, but no one but you and I were in the room.

741. Do you remember who was Clerk of Petty Sessions at the time? I cannot remember whether it was Mr. Thomas or Mr. Helmne.

742. You say you went almost immediately then to Sydney, and found out that was not the case—you told the Chairman you went in a few weeks? Yes; I made inquiries at the Mines Department.

743. You swear that when you found that information was incorrect, you took criminal proceedings against Davidson and Paterson? I do remember applying for a warrant.

744. At Question 59 I asked you: "After you had been to the Mines Department in Sydney, and found out that the Bank of North Queensland were not the registered owners, what did you do?" and you replied, "I sought criminal proceedings then"? Yes.

745. I then asked you, "Against whom?" and you replied, "Against John Davidson and Mr. Paterson. Mr. Davidson, who was a solicitor at Goulburn, had charge of my case in the Supreme Court at Goulburn, in which I got a verdict of £383 against the Goodradigbee Company";—do you remember saying that? I believe I did.

746. Did you say that after you saw me, and found out that certain information I had given you was incorrect, you applied for criminal proceedings against Davidson and Paterson? Yes, I did.

747. Do you know that criminal proceedings against Davidson and Paterson were commenced before McGuire ever came to Queanbeyan? I cannot remember.

748. Who was the Sergeant before McGuire? I am not sure.

749. Do you remember Sergeant Nelson? Yes.

750. Well, in the depositions in the case *Reid v. Paterson*—that is the last case—there is this passage: "Frederick Nelson, on his oath, saith as follows:—I am a sergeant of police, and reside at Queanbeyan"? I remember now that it was against Sergeant Nelson who failed to serve the summons.

751. Therefore you see that when you saw me—when we had that conversation in the room—that was after those criminal proceedings of yours took place at all? I cannot say that; but at that time I had fully made up my mind to have you placed on your trial.

752. *Chairman.*] Where were you living at that time? At Brindabella, 45 miles from Queanbeyan.

753. *Mr. Cook.*] Whom did you first take out a summons against in this matter? I applied against Davidson, I think, first.

754. And against whom next? I discovered there was conspiracy between Davidson, Paterson, and several others—Mr. Maitland for one. I intended to charge him, as I told the Warden's Clerk. He refused me a summons, contrary to the Mining Act; and from what I discovered, I intended to charge him with conspiracy with the Bank of North Queensland, Davidson, and others. I was told I could not charge one man only with conspiracy. I intended to get Paterson, and then to implicate others with him.

755. Why did you not? Simply because that warrant was cancelled.

756. What did you do afterwards? I got Mr. O'Sullivan to move for a Committee to inquire why that warrant was not issued.

757. *Chairman.*] This summoning of Davidson and Paterson was subsequent to the case in the Warden's Court? The Warden's Court case was the first of all.

758. After the Warden's Court case you summoned Davidson and Paterson? Yes.

759. *Mr. Cook.*] What course did you take when you tried to connect Mr. Maitland with this conspiracy;—did you apply for a warrant against Mr. Maitland? I told the Mining Registrar that I was going to implicate Mr. Maitland.

760. *Chairman.*] Did you ever make application for a warrant against Mr. Maitland? Only in that way.

761. You did not ask him to draw out a warrant against Mr. Maitland? No.

762. *Mr. Cook.*] Nor a summons? No.

763. *Mr. Colonna Close.*] The fact is that, although Mr. Maitland had announced from the Bench that the magistrates should be cautious in granting you either a warrant or a summons in any case, you ultimately got a warrant against Paterson? Yes.

764. *Mr. Cook.*] And that is the only warrant you got against anybody? Yes.

765. Did you take any action in regard to O'Brien? No.

766. None whatever? No; I had no opportunity. I was made bankrupt.

767. *Mr. Colonna Close.*] The fact is that, a short time after that, Mr. Davidson was convicted of a similar offence, and sentenced to penal servitude? Yes.

768. *Chairman.*] Was Mr. Davidson first tried before Mr. Maitland? Before the Queanbeyan Bench.

769. Was Mr. Maitland present? No.

770. I mean when you summoned him? Mr. Maitland did not sit on the Bench that day.

Edwin Charles Harris, auctioneer, Queanbeyan, sworn and examined:—

771. *Mr. Colonna Close.*] Do you remember being a clerk to Mr. Downing, a solicitor in Queanbeyan? E. C. Harris.  
16 Oct., 1900.

772. Do you remember during that time Mr. Reid coming to Mr. Downing's office? Yes.

773. Were you present at the interview between Mr. Reid and Mr. Downing? I was.

774. Do you remember Mr. Reid placing his case against the Bank of North Queensland before Mr. Downing? I do.

775. Do you remember Mr. Downing telling Mr. Reid that he had a good case, and should go into the Warden's Court? I cannot swear that he said it in those plain words.

776. Just tell us the words that you remember? He led Mr. Reid to suppose that he had a good case for the Warden's Court.

- E. C. Harris. 777. After leading Mr. Reid to believe that, what did Mr. Downing do? He said, "Before proceeding further, I will go and see the Warden"—who happened to be in town that day.
- 16 Oct., 1900. 778. He returned, I think, a short time afterwards? I suppose about twenty minutes or half an hour.
779. When he returned, what did he then tell Mr. Reid? He told Mr. Reid that he had no case for the Warden's Court; that he must take it either into the District Court, or into the Supreme Court.
780. You are not sure whether he said the District Court or the Supreme Court? No; I cannot say what the exact words were.
781. Of course, you know that if the case was for over £200, he could not go into the District Court? At that time I was not aware of that.
782. I am now quoting from depositions taken before the Warden's Court in the Brindabella case;—do you remember saying in the Warden's Court, "I never heard of Reid tendering the deposit of £200 before January, 1892"? Yes.
783. You remember saying that? Yes, I do.
784. Have you since then had your memory refreshed, or since 1895 have you had your memory refreshed at all? I have; but that would require an explanation, I think. I may state that a junior clerk who was in the office at the time I was managing Mr. Dalhanty's business, refreshed my memory and brought the transaction to my mind, so that afterwards I was prepared to swear that Mr. Reid tendered his cheque for £200, being the deposit on account of purchase.
785. In your presence? Yes, in my presence.
786. How long after you gave evidence in the Court did this conversation with this junior clerk occur? Some eighteen months afterwards, I believe.
787. *Mr. Colonna Close.*] Do you remember, before the mortgage was drawn out, Mr. Reid coming in several times and telling you he had the money ready and wanted the transfer made? Yes; and the correspondence between Delhanty & Co. and Davidson and Johnson, of Goulburn, will prove that.
788. Is it true that Mr. Reid several times came into the office, demanded the transfer, and told you he was ready to pay the money directly the transfer was made? I suppose I would be perfectly justified in saying that, on three or four occasions, Mr. Reid called in and said, "My money is ready; you give me the transfer." That was said to Mr. Dalhanty in my presence.
789. Do you remember what Mr. Dalhanty said? He said, "I must communicate with the bank," or "the vendors." I cannot say what were his exact words.
790. He said he would communicate with those for whom he was acting as agent? Yes.
791. When Mr. Reid called on those occasions that you speak of, were you always present? I was present, I know, on three or four occasions.
792. He might have called on other occasions, when you were not present? Possibly.
793. Do you remember Mr. Dalhanty saying to him, "I cannot get the Bank of North Queensland to act; and, therefore, I cannot give you a transfer"—or words to that effect? Yes; the words were to that effect, because my letter directly after that will substantiate that. With the exception of one or two letters that may have been written by a junior clerk, I think I wrote all the letters for Mr. Delhanty on the subject.
794. That is to say, that he could not get the Bank of North Queensland to proceed in the matter, and, therefore, he had no power to do anything? No; he acting as agent only.

Peter Schumack sworn and examined:—

- P. Schumack. 795. *Chairman.*] You are a clerk, and live at Queanbeyan? Yes.
- 16 Oct., 1900. 796. *Mr. Colonna Close.*] Do you remember being in the service of Mr. Dalhanty? Yes.
797. Do you remember during that time that Mr. Reid called with reference to a transfer from the Bank of North Queensland to him of some mining tenements at Brindabella? Yes.
798. Do you remember whether he called often or not, after the terms of sale were signed in June? He called several times; I could not say for certain how many times.
799. Do you know whether he called for the purpose of asking for the transfer, saying that the money for it was ready when the transfer was ready? Yes; that is what he called for.
800. Do you remember his ever having tendered, by cheque or otherwise, the £200? On the last occasion I remember him calling, he tendered a cheque, and demanded the transfer.
801. What did he say when he found that the transfer was not ready? You mean when Mr. Dalhanty said he could not give the transfer?
802. Yes;—did he say why? No; he did not say why.
803. Did he say anything about the difficulty of getting a power of attorney, or any means of transfer from the Bank of North Queensland;—about the difficulty of getting anything satisfactory from them? Not that I remember.
804. Did Mr. Reid say anything as to what he would do with the £200 when he found that the transfer was not ready? Mr. Reid left the office, saying he would put it into the Bank.
805. You have no doubt in your mind that he tendered the cheque for £200? Not at all.
806. Do you remember his saying when he called previous to that, that he had the money ready? Yes, several times.
807. *Chairman.*] Were you in the office with Mr. Harris? Yes.
808. You were both clerks there? Yes; Mr. Harris was the manager.
809. Did you all sit in one room with Mr. Dalhanty? Well, it was not all one room; there were two rooms, with only just a door in between.
810. No passage between? No.
811. Did you ordinarily hear conversations between Mr. Dalhanty and his clients when they came to see him? Yes.
812. You heard anything that Mr. Dalhanty said? Yes.
813. Were you called as a witness before the Warden's Court? No.
814. I suppose that, as you were living in Queanbeyan, you remember Mr. Reid taking action before the Warden's Court? Yes.
815. That was considerably after Mr. Reid called about this transfer? Yes.
816. It was a good long while after, was it not? It was sometime after; I could not say how long.

Edwin

Edwin Charles Harris recalled :—

817. *Mr. Colonna Close.*] I tender the original document in the form of a letter from Mr. Charles Smith, dated 13th May, 1892, who was the liquidator acting under instructions from the Bank of North Queensland, which shows that the mining tenements were included in the sale by auction of the premises which were bought by Mr. Reid;—would you kindly look at this letter from Mr. Smith, and tell me whether you identify it? That is a letter which was received by Messrs. Dalhunny & Co. shortly after the date appearing on it. By looking at the letter-book you will find that I wrote a reply to that under Mr. Dalhunny's instructions. I also tender a letter-book which contains a number of press copies of letters between Messrs. Dalhunny & Co. and the Bank of North Queensland. E. C. Harris.  
16 Oct., 1900.

818. Do you recognise these letters, written by yourself or Mr. Dalhunny? Yes. I recognise the letters written by me, of which press copies appear on pages 475, 564, 576, and 944.

819. I now produce a letter from Mr. Baxter Bruce, solicitor for the Bank, expressing astonishment, and to a certain extent indignation, that this matter was not completed as it ought to have been; but he says that that does not affect the Bank.

Letter produced, and read as follows:—

J. R. Baxter Bruce (late of Brisbane), Solicitor and Notary Public.

Queensland Agents—Chambers, Bruce, and McNab, Solicitors, Brisbane.

Dear sir,

20, Bridge-street, Sydney, 19 August, 1900.

Mr. Reid, who purchased the Goodradigbee properties, has been in to see me as solicitor for the Bank of North Queensland (Limited).

Until to-day I did not understand what his claim against the Bank really was; but he now has definitely stated that it lies in the fact that for seven months after he purchased from you, you, as the Bank's agents, refused to transfer the property to him. He admits that at the end of seven months he had a transfer of all the properties purchased by him, but states that during the interval, in consequence of the non-transfer, the tunnel fell in, and he was unable to work the mine. Of course, his possibility of recovering from the Bank on this claim is very remote; but, at the same time, I should like you to inform me if it be a fact that for seven months he asked you repeatedly to go across to the Warden's Office and have the transfer completed in his favour; and if his statement be correct, why you did not comply with his request.

Yours truly,

J. R. BAXTER BRUCE.

Messrs. Dalhunny & Co., Queanbeyan.

820. Have you seen that letter before? Yes.

821. Did it reach the office while you were there? It came to the office during my time. Perhaps, I had better explain. I left Dalhunny & Co. in November, 1892, and I was then employed by Mr. Downing, solicitor, for a considerable time—I cannot remember the exact date. Mr. Dalhunny was taken bad in July, 1895, and he sent for me, as I had been his confidential clerk and manager for years previously. He said to me, "Mr. Harris, you will have to pick up my business. Go and take out a license—I am dying." That was in July, and I remember distinctly that on the 23rd July, Mr. Dalhunny recorded his vote, and I think that very night he left for Sydney. I was not in the office until the 23rd or 24th of August; but that letter, dated the 19th August, came under my cognisance, and was one I had to reply to.

822. *Mr. Hurley.*] And what has the fact of Mr. Dalhunny having recorded his vote got to do with it? That only fixes the date; I believe it was the 23rd July.

823. *Mr. Maitland.*] Is there any reply to that letter? Yes; I wrote a reply as follows:—

Dear Sir,

Queanbeyan, 21 August, 1895.

Your favour of 19th instant duly to hand. In reply to same, I would like to point out that, not being the owners of the property, or having any control over the same, it was impossible for us, as agents, to transfer to Mr. Reid the property in question until the transfers were completed by the parties entitled to make the same. As soon as we received the documents from Sydney, which we did about seven months after the sale, they were at once completed. In the interval Mr. Reid called upon us, we believe, several times to know why the transfers were delayed.

Yours faithfully,

DALHUNNY & CO.

J. R. Baxter Bruce, Esq., solicitor, Sydney.

824. In one of the last paragraphs of the letter to Mr. Smith, the passage occurs, "Of course, you would not call it a *bonâ fide* sale if bought in on behalf of the mortgagees; but they are very anxious to sell, and will do so on very easy terms."

825. Who were the mortgagees mentioned there? The Bank of North Queensland.

826. And that was written by the liquidator for the Bank? Yes.

827. That is recognising the Bank as the mortgagees? Yes.

Robert Etheridge sworn and examined :—

828. *Chairman.*] What are you? The Curator of the Australian Museum.

R. Etheridge.

829. *Mr. Colonna Close.*] Where do you live? 21, Rosslyn-street, Darlinghurst.

830. Do you remember, some time about 1892 or 1893, going to Brindabella and Goodradigbee? Yes. 16 Oct., 1900.

831. Do you remember looking over what was to be seen, to give you an idea of the value of the mine? I remember stopping at Mr. Reid's place, on the claim he was working at, and I spent something between two and three hours on the claim.

832. And, from your technical knowledge, what was your opinion as to its value? I formed a very favourable opinion, and made a certain suggestion.

833. Did you say anything as to whether it was bottomed? I came to the conclusion that Mr. Reid had not bottomed it.

834. And you said that if it was bottomed it was likely to become very productive? I suggested that he should try the result.

835. If you had been asked to take a share in that property would you have done so? If I had been on the look-out for an investment I think I should have been inclined to have had a shot at it.

836. Could you give us what you would call an estimate of the market value of that mine, supposing that it were formed into a company;—I may tell you that it was in the company, and if £12,000 were called up and £7,000 or £5,000 were spent upon the mine, how much do you think that mine could have been honestly floated for? That is a question I would not like to answer. I did not go into that question. I was not there for a purpose of that kind. I was casually passing by and had a look at the claim, and I did not take any notes for anything of that kind.

837. You were the Government Palæontologist, were you not? I was attached to the Department of Mines. 838.

R. Etheridge. 838. You could not give us the market value? No.

16 Oct., 1900. 839. All you can say is that it looked to be a mine worth working, and likely to be productive, and that if bottomed you thought that something good might result? I took a favourable view of the claim; that is all I can say.

840. This was an alluvial claim, I understand? Yes; it was a portion of the old river bed.

841. When you say he had not bottomed, how far do you think he was from the bottom? I could not say.

842. You thought he had got upon a false bottom? Yes. He had got upon an impure bed of lignite, which was certainly not the bottom.

843. Was there any gold there at the time? I did not see any wash-dirt.

844. *Mr. Maitland.*] There were just surface indications, I suppose? Yes; and I judged by the general look of the wash.

845. You did not try the wash to see whether there was any gold? No.

846. *Mr. Hurley.*] Was there any wash? He had passed several washes.

847. Have you had any experience in geology? Yes, thirty-five years.

848. Pickology? Yes; all kinds of geology.

849. What experience have you? I commenced my career as a geological surveyor, as an officer of the Geological Survey Staff, and afterwards took to mining.

850. On what was it that you formed your opinion that the mine might prove a valuable one? On my general knowledge of what had been done, and from the look of the wash, showing that it was a portion of the old river bed.

851. Was there any surface or shallow working in the vicinity of this mine to enable you to come to the conclusion that it was likely to be valuable? There had been shallow workings in the neighbourhood.

852. You will admit that some very peculiar questions were put to you by counsel just now, as to what you would give for the mine;—you know it is all speculation? Yes, of course.

853. Are there any mines in the vicinity of this particular mine? I cannot say what there are now.

854. But I mean at that time? There was nothing there when I was on the spot, beyond purely prospecting holes.

855. Of course, if you had taken a share in this mine you would have gone into it as a prospecting venture? Exactly.

856. You would never, as a practical man, with the experience you have had, think for a moment of putting a great value on that mine and honestly floating it as it was? I should never have gone into it with a view to dishonestly floating it.

857. I do not say you would, but you would not offer an unproved mine to the public with a make-believe that it was very rich? I should not care to offer any kind of mine of that description.

858. Then you would simply offer it as a prospect? Yes.

859. How deep was the shaft? There was no shaft.

860. Was it a tunnel? No. It was an open cut, 96 feet deep, down to the bed of lignite. It was a hydraulic stripped open cut.

861. You did not see any gold in any of the terraces? No; I did not try for gold.

862. Did you wash for lignite? No; I took some of it away as a specimen.

863. And yet you would have invested in the claim? I say that I would have been ready to invest in it as a prospecting speculation.

864. *Mr. Close.*] Supposing that you had found that £1,200 worth of gold had been taken out of it, would that have influenced your opinion favourably? Oh, yes.

865. *Mr. Hurley.*] Did you know that gold had been got there? Yes.

866. Oh, that puts another complexion on the matter; I was not aware that you knew of that when you formed your opinion of the property;—beyond the three hours you put in there you had never spent any time on the property? Not in that immediate spot; but I have been to the valley itself several times.

867. *Mr. Maitland.*] If this were a payable mine, it would be the only payable mine within 30 miles.

868. *Chairman.*] I suppose that you do not profess to have a detailed local knowledge of the neighbourhood? Higher up the river I know a good deal about it—that is, near its junction with the Murrumbidgee; I have been there several times.

869. You were aware that gold had been got there at the time of your visit? Yes.

870. And you thought that, on further developments, it would prove a satisfactory property? I thought so from what I saw. I may say that, until I visited the spot on the occasion referred to, I was unacquainted with Mr. Reid. I made his acquaintance there, and I had not met him before. A party of us were passing Mr. Reid's residence on our way to Coolamon Creek, and we stayed there for the midday meal, and afterwards spent between two and three hours on the claim.

WEDNESDAY, 17 OCTOBER, 1900.

Present:—

MR. COOK,

MR. RICHARDS.

MR. THOMAS,

W. A. HOLMAN, Esq., IN THE CHAIR.

Mr. Colonna Close, instructed by Mr. A. C. Roberts, appeared as counsel for Mr. Reid.

Mr. E. L. Maitland appeared in person.

Alfred John Charter, manager of the Sydney Branch of the Bank of North Queensland, sworn and examined:—

A. J. Charter. 871. *Mr. Colonna Close.*] You often, I suppose, take a mortgage as a security for money you advance to anyone? We often do.

17 Oct., 1900. 872. Supposing a person came to you, and said "I want you to advance money on mortgage on a certain property, but I shall not go into possession of that property for three or four months afterwards, and I am not certain that I shall go into possession of it all," would you advance money on mortgage on such conditions as those? I do not quite understand the question. 873.

873. Supposing a person came to you for an advance of money, and said, "There is certain property we anticipate will be received by us in three or four months; but we are not quite certain that it will ever be received by us; but that is the only security we can offer";—would you, on that, advance any money? I am not the Bank. I cannot tell you whether the Bank would do it. I am only manager of the Sydney branch of the Bank. A. J. Charter.  
17 Oct., 1900.

874. Do you think that, under those circumstances, the Bank would do it? I really cannot say what the Bank would do under those circumstances; they might refuse or do something else.

875. Do you think the Bank would advance £500 on mortgage on property that did not belong to the man who asked for the advance of the money, and who said that he was not likely to be in possession of it for three or four months, and was not certain that he would be in possession of it even at the end of that time;—will you swear that the Bank would not laugh or smile at such a proposal as that? I do not know anything of the facts of this case.

876. During the whole of your experience as a bank manager, have you ever known that a Bank would advance money on such terms as these: a person comes to you for an advance of money, say £500, and you ask him what his security is, and he says, "My security is the possibility of having in my possession in three months' time the land on which I want the money; but I am not absolutely certain that I shall ever get the land into my possession";—would you, under those circumstances, even take the matter into consideration? It would depend a great deal on the character of the man and his standing.

877. Supposing his character were in the highest degree respectable, would you entertain a proposal that you should advance £500 upon property which he told you was not in his possession, and that he would not get possession of until three months afterwards, and possibly not even then;—would you think of advancing the money if he offered you no other security than that? If he offered no other security, and were a stranger to me, I certainly would not.

878. If you knew him well, and he had no other security to offer, would you do it? Possibly; but that is a very supposititious case.

879. *Chairman.*] You have not in your possession at present the Bank's papers in connection with this case; Mr. Baxter Bruce has them? Yes; Mr. Baxter Bruce has them. I think that he might be able to assist the Committee, he knowing the whole of the circumstances, whereas I know nothing about them.

880. You have come into office in Sydney since this affair took place? Yes; I have been here only one year.

John Robb Baxter Bruce, solicitor, sworn and examined:—

881. *Chairman*] You are solicitor for the Bank of North Queensland? Yes.

882. We have reason for believing that Messrs. Sly and Hamilton were their solicitors at one time? They were their solicitors before I came to Sydney, and they were the solicitors who acted for the Bank in connection with a sale to Reid of this property and the mortgaging of the property back from Reid to the Bank. Since I first knew Mr. Reid there have been, firstly, an action brought by the Bank of North Queensland against Reid, in which they sought to recover, I think, certain interest and charges which were due under a mortgage they held from Mr. Reid on a certain freehold, and on certain conditional purchases; that is the land in question. In that case Reid entered a defence and carried on that defence until the trial, where we had to fee counsel and appear before the Court, and then Mr. Reid did not put in an appearance, and the Judge made some very strong remarks about defendant's unnecessarily causing litigation, and we got judgment, and also an order for costs amounting to a considerable sum. We did not attempt to recover under that judgment. I am not sure whether we next began to make Reid insolvent or whether he started an action against the Bank in the Warden's Court, in which he tried to recover, I think, £5,000. At any rate, whichever proceedings took place first, before he was made insolvent he took the proceedings in the Warden's Court. I went to Queanbeyan, and the Warden found against Reid, and granted us an order for costs. Subsequently we proceeded with the insolvency proceedings, and Reid fought every step of those proceedings, alleging fraud and other things. Notwithstanding his opposition, he was adjudicated insolvent. I think that after we got the judgment against him in the Supreme Court, and before any proceedings were taken in the Warden's Court, we brought an action against him in ejectment—to try to get him out of the land he had mortgaged to us, and which we had taken possession of under the mortgage. He fought that right up to the date of trial, and then he did not appear, and we got an order of ejectment against him. We also got an order for costs: however, we did not recover any of the costs. We then thought the whole thing was over. At the last sitting of the Goulburn Court he brought another action against us, and we had to go up and defend it, although upon the face of it it was clear to anybody that there was no cause of action. We had to go, because we were sued for £5,000. We pleaded then that there was no case against us, because the time under the statute of limitations had run. We had already had three actions, and had obtained an order for costs in every one of them, and in every case excepting the one at the Queanbeyan Court Reid never appeared, and it was not likely that on this occasion we were going to go into a two or three days' trial when we could wipe him out of Court at once. The Judge called upon Mr. Colonna Close before the case was gone into, and said, "How are you going to meet this; there is a complete answer." It was the first case, I believe, under the English law where a man was not even allowed to open his case. The Judge said, "It is too ridiculous; strike it out," and he gave us an order for costs; so the case was wiped out again. Going back to the Warden's Court case, I did not know anything about the matter. It was some years old, and I had to fish up everything. I wrote letters to Dulhunty, and went and saw Sly and Russell, and ultimately, with the letters I had, I sifted the matter to the bottom. From the documents that were produced in the Warden's Court, it appeared perfectly plain that there had been an interval of some six or seven months, during which a transfer of certain mining tenements was not completed by the vendors to the purchaser, the vendors being the Bank of North Queensland, and the purchaser being Reid. The Bank, so far as I can make out, had a mortgage from the Goodradigbee Company over the conditional purchases and over the freehold, but they had never taken a direct mortgage over the chattel interests. The Goodradigbee Company and the Bank, however, were perfectly friendly, and when the Goodradigbee Company were called upon by the Bank to pay up their indebtedness it was arranged that the Bank should sell the whole of the property of the Goodradigbee Company, and that the Goodradigbee Company would assist them in completing any title which was necessary. The property was sold by Dulhunty, and a condition of sale was that there was to be £200 deposit. That deposit was not tendered, nor was it ever made until the transfers were completed, and the reasons for that are explained in the letters which were

J. R. B.  
Bruce.  
17 Oct., 1900.

J. R. B.  
Bruce.  
17 Oct., 1900.

put in evidence in the Warden's Court, namely, because the solicitors employed by the purchaser were finding the money to enable him to purchase, and they refused to make the deposit until the documents were all in order.

883. Which documents? The transfers of the mining tenements. At no time, until immediately before the commencement of the proceedings of the Warden's Court, was any claim ever made against the Bank in consequence of losses which Reid had sustained; and the delay arose entirely, or nearly entirely, from the action of the purchaser's solicitors in Goulburn, who would not force the thing on, and partly in consequence of Reid refusing to go to Queanbeyan to sign the transfers. There is a letter here, dated 8th October, 1892, written by Reid to the manager of the Bank of North Queensland, and in which Reid says:—

I am in receipt of yours of 26th ultimo, asking for cheque for £34 for interest, &c., payable to your Bank on the 22nd September. I think there must be an error in the date, because the transfer was not made to me until some time in December, although previously to that I had repeatedly applied by letter and through my solicitors—Messrs. Davidson and Johnson—that the transfer might be completed without delay; and the deposit money lay in the hands of your agents—Messrs. Delahunty & Co.—for some considerable time before the arrangements were completed. One consequence of the delay was that the races, tunnels, and dams got out of order, and entailed a considerable expense upon me to put in working order. Under these circumstances, I think it reasonable that interest should be charged only from date of transfer, the delay not being caused by any default on my part.

Reid sold these very mining tenements to somebody else, and yet he says he never had them; and on the 8th October, 1892, after he had purchased the mining tenements, and after he had resold them to somebody else, evidently the only thing he wanted was a concession in regard to interest, although he had been in possession, I think, for two years. To that letter, Mr. Patterson, the Sydney manager of the Bank, replied on the 12th October, 1892:—

With regard to due date of interest, it was originally made payable on 22nd June in each year, and it being considered you had possession from that date, our solicitors were disposed to insist on this point; but on the matter being represented to me, I requested them to give way on the point, and it was accordingly altered to 22nd September, as it now stands in the mortgage executed by you.

With reference to the delay of which you complain, our solicitors say that it was caused by your solicitors. However, the fact remains that according to the mortgage the interest is due on 22nd September, and as we have already waived three months apparently, we must now insist on your making the payments on due date.

With regard to the payment now overdue, as you say you will send cheque at the end of the present month, I will allow it to remain over till then, but if so, I must charge you interest of the £34 from due date till date of payment. I will advise you the amount in due course, to be included in your next cheque.

After the receipt of that letter from Mr. Patterson, in which it was pointed out that in consequence of delay a concession of three months had been allowed, there was never any letter written or claim made, but Reid sent a cheque on 31st December, 1892, "for £34, being amount of one year's interest due 8th proximo." He made subsequent payments of interest.

884. You asked for interest to September, and he paid it to January; that would be twelve months from the actual date of transfer? Yes; and he paid subsequent interest also, and never raised a claim that he had not been in possession.

885. Do you understand, then, that Mr. Reid had never raised a claim—he had not been put into possession? No, never. It was never raised until the 2nd March, 1894. In that letter he does not ask for, or suggest he is entitled to anything. In a letter dated 2nd March, 1894, to the manager of the Bank, Reid says:—

The cause of the loss was the delay in securing the transfer. When in Queanbeyan last week, I called upon Messrs. Delahunty & Co., the auctioneer who conducted the sale on behalf of your Bank, and they informed that their terms of sale were immediate transfer and possession. Possession I had, but the transfer was so long delayed that I feared to expend money on the property lest I lost not only the property, but my labour and expenditure as well.

You will notice that in that letter of the 2nd March, 1894, Reid uses the words "possession I had":—on the 2nd February, 1894, Mr. Reid writes to the manager of the Bank, evidently in reply to a letter which had been sent to him. He says:—

With respect to your demand for immediate payment of interest, I am sorry to say that I cannot comply with it. The six months' delay that occurred in transferring to me after purchase had the effect of destroying the mining property, and I have been in the disheartening position of endeavouring to work a sluicing claim without water. Whether the delay was caused by your Bank or the late Goodradigby Company is immaterial. The effect was the same, and in the interval that elapsed between the purchase in July and the delivery in January the damage was effected. It was from you, as mortgagee of the Goodradigby Company, that I purchased, and you that should have given possession immediately after the sale.

An attempt has been made to make a great deal out of the delay in the signing of the transfers.

886. *Mr. Cook.*] As I understand, you say you would not give him the transfer until you got the money? No; and if you will read the letter of Sly and Russell to Davidson and Johnson, I do not think you will have any difficulty in arriving at where the fault lay in regard to getting the transfers.

887. *Chairman.*] Do you wish to direct our attention to any particular letter? I think it may probably help you if I do show how the thing stood.

888. *Mr. Cook.*] We want to know why this transaction was not taken as ordinary transactions are? On the 18th September, 1891, Sly and Russell wrote to Davidson and Johnson:—

As solicitors for the Bank of North Queensland, Limited (the mortgagees), copy of your letter of 18th July last has been forwarded by Mr. Morgan, of Queanbeyan, solicitor, to us.

The letter from Mr. Morgan, there referred to, is dated 10th July, 1891. It was a letter from Mr. Reid's solicitors, Davidson and Johnson, to Mr. E. E. Morgan, solicitor, Queanbeyan. It is as follows:—

We now send Torrens' and conditional purchase transfer for execution.

The mortgage over the chattel property must be released and handed over to us before completion.

We have not been able to forward transfers of the mining tenements, as we shall want particulars of same from you in lieu of abstract, before we can do so.

We do not see our way to pay the deposit until we have looked into the matter and found that everything is satisfactory.

Davidson and Johnson replied to Sly and Hamilton in a letter, dated 21st September, 1891, in which they say:—

We are in receipt of your letter of 18th inst., and now return draft mortgage approved. We would suggest your adopting the addition on the second sheet, as it would make your security over the conditional purchase more complete. We often deal with them this way, and find it very convenient and a saving of trouble, besides making securities more compact.

We think we ought to have a short assignment of the conditional purchase, and the chattel property, more especially as the conditional purchase has been in your client's name and will continue to be so until the money is paid off.

We

We have accordingly drafted a short assignment and send it herewith. We understand that the transfer of the mining tenements was to be executed in the Registrar's Office by the parties, or else a power of attorney from them, or such of them as may not be there, has to be produced, for which they have printed forms. We can get our client to attend, but we can scarcely see how a registered company could attend, so that probably it will be better for you to provide a power of attorney from the Goodradigby Gold-mining Company, in whose name the mining tenements still stand.

J. R. B.  
Bruce.

17 Oct., 1900.

Therefore, on the 21st September, 1891, Mr. Reid's solicitors knew that it was not coming from the Bank but from the Goodradigby Company, and the solicitors did not raise any question as to delay.

As regards the deposit, we are lending the amount of same to Mr. Reid upon the security of a first mortgage over some other selections which he has, and a second mortgage over the property now purchased, and should like to see the title of this latter part perfected before we pay over, but the payment will be duly made when required.

They were never in a position to execute the mortgage, because the deposit was never made. On the 7th October, Messrs. Sly and Hamilton send back certain documents to Messrs. Davidson and Johnson, and say :—

We also return draft assignment of conditional purchase and chattel property, approved by us, and copy power of attorney from the Goodradigby Company, on the printed form mentioned by you, authorising a transfer of the mining tenements. The original will be handed you on completion.

The next letter was from Sly and Russell to Davidson and Johnson, dated 4th November, 1891 :—

We are very much surprised at the long delay in this matter. We should be glad to receive from you the mortgage executed by your client, and have to request that the £200 deposit may be at once paid in accordance with the terms of the contract.

On the 19th November, 1891, nothing having been heard from the solicitors for the purchaser, Sly and Russell wrote again, as follows :—

We are very much surprised at the continued delay in this matter. On 7th October last we forwarded you mortgage for execution by your client, and on the 4th instant we wrote urging you to get matter completed. We received a reply from you that you expected to be ready to complete by 10th instant. That is now over a week ago. As the Bank is losing interest all this time until completion, unless we receive from you at once the mortgage, duly executed, and the deposit is paid at once in terms of the contract, we shall consider the desirability of either cancelling the contract or of filing a statement of claim on the Equity side of the Court to compel specific performance thereof.

That letter is from the Bank's solicitors to Reid's solicitors, complaining of the delay they were making in executing the contract. Sly and Russell, as pointed out already, began by writing on 7th October, 1891, and they did not receive a letter from Davidson and Johnson in reply until the 27th November, 1891. The Bank is accused of having caused all this delay, and yet all this time passes, and the 27th November is the first time we get a reply. Then Davidson and Johnson write :—

In reply to yours of 19th instant, we had a letter from our client the other day, saying there was no J.P. in his vicinity, but that he would come down and sign the papers when shearing was over, which ought to be by now.

No communication came from them, although it is said Reid was so anxious to complete the transaction, until the 27th November, when they give as the reason for the delay that there was no J.P. in the vicinity; and, although the matter was so very important, Reid was not going to hurry down, but was going to wait until the shearing was over. In that letter they go on to say :—

We have, however, written him to-day, so that he will get the letter on Sunday, impressing on him the necessity of at once coming down, —

That is, Reid's own solicitors wrote to our solicitors that they were impressing on him that he must come down.

and if it will facilitate a settlement we may mention that we are willing to pay  $7\frac{1}{2}$  per cent. on deposit from date of yours under reply until settlement.

Here are the people who were complaining, and yet they offer to pay us  $7\frac{1}{2}$  per cent.; and although it is said that we were wrong in not completing, Reid's own solicitors admit that they were wrong, and say that they will pay us  $7\frac{1}{2}$  per cent. on the £200 deposit.

889. What do they mean by offering to pay  $7\frac{1}{2}$  per cent.? From the time during which the deposit had not been made in consequence of the delays that occurred.

890. *Mr. Cook.*] Seven and a half per cent. on the £200? Yes, interest at the rate of  $7\frac{1}{2}$  per cent. per annum. Up to that time, at any rate, when they were willing to pay interest, they did not think they were injured. They did not get the matter completed themselves until the 21st December, 1891, when they wrote :—

We send herewith memorandum of assignment and Torrens transfer, which please get executed by your clients.

Those were sent, according to the correspondence, to Davidson and Johnson, by letter from Sly and Russell, on the 18th September, 1891, and they remained with them until 21st December, 1891. On the following day Sly and Russell acknowledge the receipt of this long-delayed letter from Davidson and Johnson, and by that letter they say :

We return transfer, which we will be glad if you will at once forward to Mr. Reid, and obtain his signature thereto, and return to us.

On the 11th January, 1892, Sly and Russell write to Davidson and Johnson :—

We have to-day received deposit from auctioneers less their charges.

On 22nd December we sent you transfer for Mr. Reid's signature. This has not yet been returned to us.

Will you favour us by having such transfer signed by Mr. Reid, and returned to us at once.

When returning transfer to us, please let us have the amount of stamp duty and fees to be paid for registration.

On the 13th January, 1892, Davidson and Johnson send the transfer asked for; and that completes the transaction.

891. Is this the period as to which Reid complains of the delay of the Bank in making the transfer, and of the consequent injury to himself? Yes; but for three months out of the seven his solicitors held the documents; his own solicitors admit that they held those documents for three months out of the seven. During the whole of the time correspondence goes on with Davidson and Johnson, Sly and Russell immediately replying to Davidson and Johnson's letter, but Davidson and Johnson not replying in the same way to their letters.

892. There was an interregnum from January, 1892, to 1894;—do you know what occurred during that interregnum? No; I cannot tell you what occurred, except what Reid himself told me. When Reid first started this claim against the Bank, I could not make head or tail of it, and I asked him to come in and see me, and he came, and we had several conversations, and, according to his own admission, he had been letting the thing hang back.

893. Is there any correspondence between Reid and the Bank during those years? No.

894.

- J. R. B. Bruce.  
17 Oct., 1900.
894. *Chairman.*] When did you first hear this claim by Reid? Towards the end of 1895 was the first I ever heard of this claim for £5,000.
895. Did you appear personally for the Bank before the Warden's Court? Yes.
896. And you produced these letters before the Warden's Court? Yes.
897. *Mr. Colonna Close.*] I think that an action was brought by Reid against the Bank of North Queensland for damages which he alleged he had sustained in consequence of delay? The documents speak for themselves; I cannot say from memory.
898. Do you remember Reid being non-suited? I do not know if he was non-suited, or if there was a verdict for the defendants. I know that I won the case.
899. If there had been a verdict for the defendants at Queanbeyan, do you not think that you would have pleaded *res judicature* at Goulburn? I consulted with counsel as to whether we should plead *res judicature*. We compared the plaint in the Queanbeyan Court with the form of action at Goulburn, and found it was not on the same ground, and the plea of *res judicature*, therefore, would not have been an answer to it. If you look at the plaint in the Warden's Court, and at the statement of claim in the action at Goulburn, you will find that the plea of *res judicature* would not suit. I remember distinctly that we wanted to plead *res judicature*; but there was a variation between the two claims, and *res judicature* was not a complete answer.
900. Do you happen to know what is the difference between the action brought in the Warden's Court and the action brought at Goulburn? I cannot tell you now; but I could if I looked into the matter.
901. Can you tell me the date of the mortgage from Reid to the Bank of North Queensland? 6th February, 1892—the day after the transfer.
902. Do you admit that Mr. Reid might have gone into possession for a month on the terms of sale; but that after that time, unless the mining tenements were registered in his name, he was a trespasser there, and was liable to penalties;—do you know that? I do not know anything about it.
903. Do you know that he has never had legal possession of that mine until the transfer was registered in January? That is a matter of law.
904. According to the terms of sale, Mr. Reid purchased all the right, title, and interest of the Goodradigbee Gold-mining Company (Limited);—would that include the mining tenements? I expect it would.
905. Do you know that Reid purchased from the Bank of North Queensland, and not from the Goodradigbee Gold-mining Company? Yes, I know that; but I have explained the private arrangement between the Bank of North Queensland and the Goodradigbee Company.
906. You know that Reid purchased from the Bank of North Queensland all the right, title, and interest of the Goodradigbee Gold-mining Company; and do you happen to know that the Bank of North Queensland never were mortgagees of the mining tenement of the Goodradigbee Company? I have admitted that.
907. Do you happen to know that, according to the terms of sale, the possession was to be given at once—contemporaneously with the payment of the deposit? Yes. They made a mistake though, for he got possession, but he did not give the deposit.
908. I think you swore just now that the deposit was never tendered until the transfer was completed? Yes; I take that from the correspondence of Johnson himself; I was not there.
909. Would you be astonished to hear that not only Mr. Dulhunty's managing clerk, but also his under-clerk and Mr. Reid, have sworn here that the deposit of £200 was tendered a short time after the terms of sale? Whether I was astonished or not would not affect the case. I simply say that in a letter from the solicitors they admit that it had not been tendered, and they offered to pay  $7\frac{1}{2}$  per cent., because it had not been paid.
910. You entered into this matter for the first time after it came before the Warden's Court? I did not say that. I said I went into it before then.
911. You said, "I heard nothing about Reid's claim until about September, 1895"? Yes; this claim.
912. Had you any interviews with Reid preceding this letter which you wrote to Delhunty & Co.? Evidently this is the date upon which I had the first interview with Reid, because I say, "I did not know until to-day."
913. Had you seen him previous to the 19th August? I do not think so, because the letter indicates to me that I had not.
914. Do you remember getting a letter from Mr. Dulhunty explaining why the delay occurred? I am prepared to admit that I got a letter from Mr. Dulhunty admitting that the delay occurred in consequence of the mining tenements not being transferred.
915. You admit that Mr. Davidson, who advanced the money, was only acting within his rights in asking that the title to the mining tenements should be shown to him? Yes.
916. I suppose you know, from having heard it, that the Bank never had any title to these mining tenements, and the Bank ultimately did not convey them? I have said so already.
917. *Mr. Maitland.*] What is the meaning of the word "possession"? There is legal possession, constructive possession—and half a dozen other kinds of possession.
918. *Mr. Cook.*] Well, what is the difference between "immediate possession" and "possession at once"? I cannot tell you the difference. For a man to come into possession of a thing, and then for anyone to say that he had not possession of it, because he had not a piece of paper that gave him a title to it, would be ridiculous. If he remained in possession nobody could turn him out—not even the man who held the title could turn him out, if he had purchased from the person entitled to sell.
919. *Mr. Maitland.*] The conditions of sale state that Reid purchased all the right, title, and interest under bill of sale by W. B. Shaw, "for the sum of £700, upon the following terms, viz., £200 deposit, to be paid forthwith to Messrs. A. M. Delhunty & Co., the balance in five years with interest at the rate of 6 per cent. per annum, payable annually, to be secured by mortgage on all the property now purchased, possession to be given at once, transfer to be prepared"? If a man buys a piece of property, and you hand over to him the deeds, but do not take him on to the land and give him possession of it, then that man has got what is called constructive possession. Further, you need not hand the man the deeds, but can take him on to the land, or allow him to go on to the land, and if he goes on to the land, then he has possession. That is a higher title than constructive possession. The mere getting of the title is a thing that comes afterwards. Once in possession nobody could turn him out, not even the man who had sold to him, unless he made default. You could take possession of a vacant piece of land to-morrow, and nobody could turn you out, except the true owner.

920. Suppose another man comes on the scene, and says, "What are you doing here?" and you reply "Well, I have been put in possession"; and then he says, "But I am interested in this land, and I did not put you in possession";—what then? Then the man in possession has a better title until the other proves he has a better one. He must take action.

J. R. B.  
Bruce.  
17 Oct., 1900.

921. The man who comes along must dislodge the other? Yes; he must dislodge him by legal process. The whole thing originated in the system of conveyancing; it all sprang from that. The original way of conveying land was by going and taking possession actually of it; but that was found to be very cumbersome, people having sometimes to come from the other end of the world. People could not get possession of land in the Holy Land until they actually came and took possession of it; and in order to get over the difficulty, they passed a law stating that to him who had the use of the land would be given the possession of the land; and thus in all titles you get now it is said that it is given "unto and to the use of." The expression was that it was given to the use of—it was conveyed to So-and-So and to his use—and that did away with the necessity for his going on to the land and take possession of it, because the Statute of Uses said that him to whom the use was given should have possession.

922. *Chairman.*] Then he need not be in bodily possession at all? No; supposing a man has got a deed, and goes to take possession, and finds a man in possession, he must go the Court and bring an action of ejectment on his title, and must have that man ejected from his land. The only people who could have legally disturbed Reid after he went into possession were the Bank or the Goodradigbee Company; and as he was there with their consent, he could not have been disturbed by anybody, even if he had been with-out any title at all.

923. That law applies to freehold land and land under process of conveyance, but not to occupants of Crown lands;—this would be under a different law altogether? No; even occupants of Crown land would be entitled to hold it except against the Crown. The Crown would be the only one who could dispossess them. Even the Mining Act did not take away from that—it could not give to Tom, Dick, or Harry the right to put you out.

924. *Mr. Cook.*] But under the Mining Act, could not the Crown eject you? Yes; the Crown could.

925. *Mr. Maitland.*] If Reid admits that he was in occupation of this ground, he simply got all the Bank promised to give him? That was all.

926. What did Reid buy? The deed speaks for itself.

927. You know that what was bought was certain land, mining properties, and mining plant? Yes.

928. *Chairman.*] There was no doubt in your mind that Reid had purchased the mining tenements? Yes; no doubt.

929. Though not under mortgage to the Bank, they were put up for sale, by virtue of the arrangement you told us of? Yes; and he took it and kept it for two years, without saying a word.

930. *Mr. Maitland.*] The £200 was a deposit on the purchase of the freehold land, conditional purchase, and mining plant? Yes.

931. Was it for the mining tenements? Yes; everything advertised. There was a deposit of £200 to be paid.

932. Part of the conditions of sale was that the £200 should be paid forthwith? Yes; but it was not paid forthwith.

933. Supposing that a purchaser buys certain property, and employs a solicitor to look after the matter for him, and afterwards finds out that there is some defect in the title, what would be his remedy? He would call upon you to rectify the title, or, if it was grave enough, he might say, "I will not go on."

934. If there was a fault, a solicitor should have discovered it? If he discovers it, it is a matter for the purchaser to say whether he will throw over the contract, or insist upon its being carried out. If A sells a property to B, and according to the conditions of sale, B has a certain time to look into the matter, and if B accepts absolutely a bad title, and pays as much as £50,000, if you like, for a title, to a man who has not a scrap of title, he cannot get that money back.

935. Supposing it were found afterwards that the title was bad in this case, what would be the purchaser's remedy? He would have a remedy, perhaps, against his solicitor.

936. But would he have one against the Bank? No; unless there was a special condition in the documents which enabled him, notwithstanding his having taken a bad title, to bring an action against the Bank to waive the contract. Any contract can be upset for fraud. Immediately you import fraud into a contract it vitiates the contract.

937. *Mr. Cook.*] Supposing I were to ask you to put in such a covenant on behalf of the Bank as you are speaking of, would you put it in? For the Bank, it would go in as a matter of course, for further assurance. I do not mean with regard to chattels, but with regard to land it would go in, except in certain cases. When you buy from trustees they never covenant to give a good title; consequently you may be landed with a title that is bad without having a remedy; but if you buy from an ordinary individual under ordinary conditions, then if the title is defective you probably have a remedy by getting back your purchase money—that is, if the person selling covenants to give you a good title.

938. Was there such a covenant in this title to Reid? No; but he got a good title. All he complained of was that it was seven months afterwards. This is the case of a man who, knowing all the faults, says, "I will complete that title." He does not complain, but at the end of seven months says, "Though you have kept me seven months out of the property, I will complete," and having completed and taken it, he then says, "I will take that, and still bring an action for damages."

939. *Mr. Maitland.*] What would be the proper Court for a man to commence his action in? Any Court he liked.

940. Could he commence an action like that in the Warden's Court? No; certainly not. He would require to commence his action at common law. His action would be against his solicitor or for breach of contract.

William Davies Downing sworn and examined:—

941. *Chairman.*] What are you? A solicitor, practising at Queanbeyan.

942. You know the parties to this inquiry, Mr. Reid and Mr. Maitland? Yes; but I do not know the scope of the inquiry, as the only information I have is from the subpoena.

943. You know Mr. Maitland, and remember his being the Warden in Queanbeyan? Yes.

944. Do you know Mr. Reid? Yes, well.

945. *Mr. Maitland.*] Did Mr. Reid ever interview you? Yes.

W. D.  
Downing.  
17 Oct., 1900.

946.

W. D.  
Downing.  
17 Oct., 1900.

946. Can you recollect when? I made a note of the date, as I thought it possible I might be asked about that; it was on May 28, 1895.
947. Have you any recollection of what took place at the interview;—it was a long time ago, but have you any recollection of what occurred? I have a partial recollection; I remember advising Mr. Reid, who came to ask for advice.
948. Could you give us roughly what it was? I cannot remember the point upon which Mr. Reid sought my advice. I have tried hard to remember the point upon which he consulted me, but I cannot do so. I remember, however, that I advised him that, in my opinion, his action should be taken in the Supreme Court, and not before the Warden. I remember that, because of other circumstances which occurred afterwards.
949. *Chairman.*] That is impressed on your memory? Yes; but the actual point upon which he consulted me I have not the faintest recollection of. My diary merely shows me that there was a consultation.
950. *Mr. Colonna Close.*] You say that you remember telling him his action was for the Supreme Court? In my opinion, if he had an action, he should take it in the Supreme Court, and not before the Warden.
951. *Mr. Maitland.*] Can you remember whether he mentioned my name, and in what manner? Not at that interview. I saw Mr. Reid twice on that date. Hitherto, I have spoken of the morning interview, when he first came to see me. He did not then mention your name at all.
952. Did he do so on the second occasion? After the first interview, I had gone out, and as you were in town, I had an interview with you, and I remember distinctly putting an "A" "B" case to you on this very matter, because I wanted to confirm my own opinion, and you seemed to agree with me that the advice I had given was right.
953. Did you tell me the names of the parties? No; I simply put it to as an "A" "B" case.
954. Did Mr. Reid at any time complain to you that I had refused him a Warden's Court summons? You could not refuse him a Warden's Court summons.
955. But did he complain to you that I had done so? I do not think so.
956. *Chairman.*] In the course of either of these interviews? I could scarcely remember a detail of that kind. A Warden's Court summons, however, comes from the clerk, and has nothing to do with the Warden at all. We frequently get Warden's Court summonses, and never think of going to the Warden about them.
957. *Mr. Maitland.*] You have done a great deal of that work? Yes; a great deal.
958. Did you ever appeal to me to fix a date for the hearing of the summons? No; I always go to the clerk for the summons.
959. And there is a regular date every month for the holding of the court? Yes; the third Wednesday in the month now.
960. *Mr. Colonna Close.*] Is that for the Warden's Court;—I understand you to say that the third Wednesday in the month is generally arranged for the holding of the Warden's Court? I do not know what the arrangements are between the Magistrates and the clerk. But as I understand it, as a professional man there, the Police Magistrate attends on the third Wednesday in the month—that is the small debts day—and he, being the Warden, uses that day for any Warden's business he may have. It may be that they regard that as the Warden's day as well; but I have no information on that beyond what I have stated.
961. *Mr. Maitland.*] Did you understand from Mr. Reid that anything prevented him from going into the Warden's Court? Certainly not. I simply advised him as to what I regarded as to the preferable course to take.
962. *Mr. Colonna Close.*] You wrote Mr. Maitland a letter a little while ago; the letter has been put in, and is dated the 30th November, 1899; you say in that letter that you have had a communication from Mr. Maitland? Yes.
963. And the communication was in reference to this matter? I believe it was.
964. And you wrote to him, stating that you forgot the exact point upon which Mr. Reid came to you? Yes; I believe I did say something of that kind.
965. You said further that he had no case in the Warden's Court, and should proceed in the Supreme Court? Yes, that is so.
966. That is your opinion, as far as you can remember—that he had no case in the Warden's Court? Yes; that is my recollection of the case.
967. Your recollection now is the same as when you wrote that letter—that he had no case in the Warden's Court? I would like to put it in this way, to make it more clear: I regarded it as a case for the Supreme Court rather than the Warden's Court, if any. I know that Mr. Reid was dissatisfied with the advice I gave him, and I have also reason to believe that he consulted other solicitors afterwards, and actually took different advice.
968. In your letter, do you say that he had no case in the Warden's Court and should proceed in the Supreme Court? Yes, practically.
969. That was twelve months ago nearly? Yes; ten months ago.
970. And therefore your recollection of ten months ago would be better than now—that would be a natural inference? Yes; because I have never thought of the case since.
971. You also say in your letter that you also told him that you would be happy to contest the case before the Warden's Court, but he declined;—if he had no case for the Warden's Court, how could you have tested it there? I gave him the best advice I could, but I was quite willing to take his case and try it for him, if he wished to waste his money.
972. If he had no case? I should think, from what I have heard of you, that you would be the last man in the world to suggest that a man should go into Court when you knew that he had no case.
973. *Chairman.*] Mr. Downing's explanation is that he advised him to go into the Supreme Court, but if Mr. Reid overrode his advice he would take the case to the Warden's Court, if he wished.
974. *Mr. Colonna Close.*] You say in your letter that you remember distinctly telling him that he had no case in the Warden's Court? That was my opinion. I had a chat with Mr. Maitland about the case, and I put an "A" "B" case to him, and he simply said that was Reid's case, and evidently thought with me.
- 974½. *Chairman.*] Although you did not actually communicate to Mr. Maitland that it was Reid's case, he gathered that it was Reid's case? Yes; it appeared to me that Mr. Reid had consulted Mr. Maitland before he came to me—that was the impression I had.

W. D.  
Downing.

17 Oct., 1900.

975. And I suppose that was how Mr. Maitland came to think that it was Reid's case? I do not know that.

976. There were two separate interviews between you and Mr. Reid? Yes; I met Mr. Reid in the morning, and again casually met him in the afternoon. In a country town you meet people all over the place. He came to me professionally in the morning, and after seeing Mr. Maitland, I saw Mr. Reid casually again in the afternoon.

977. The two interviews were so distinct in their nature that you would not be likely to confuse the incidents of the two, one was in your office and the other would be on the street? I could not exactly say; he met me in the office in the first instance, but where the second interview took place I could not say now. I know there were two interviews.

978. *Mr. Close.*] Do you not remember that when you came back after seeing Mr. Maitland you found Mr. Reid in your office, who at that time handed you a half guinea for your advice? No, I know Mr. Reid paid me, but when I received the money I could not tell you.

979. I suppose you gave a receipt for the money? I suppose so.

980. You would not give that in the street? No. If the fee were paid it would be in the office unless Mr. Harris gave a receipt for me.

981. But you gave the receipt yourself? If I gave the receipt it must have been in the office.

982. Mr. Reid really waited for you until you came back after seeing Mr. Maitland, and when you came back you gave him your advice? I do not remember.

983. *Chairman.*] Is there any possibility of your having done this;—is it possible that you should have given different advice to Mr. Reid at the two interviews, that in the morning you told him that there was room to stand in the Warden's Court and in the afternoon that there was not? No, I was quite convinced in the morning that he had no case in the Warden's Court. I remember that distinctly because Mr. Reid was rather annoyed that I could not advise him as he wished. The strange part of the thing is that I cannot remember the point on which I advised him.

984. But you recollect that he did go into the Warden's Court in the end? Yes. He subsequently instructed Mr. O'Brien of Goulburn to appear in the Warden's Court.

985. So that, unless there was some gross irregularity, he would have had a footing in the Warden's Court? Of course you can take a case to a Warden's Court, and I would have been very glad to act in the matter if Mr. Reid wished to go contrary to my advice. If I acted for him I would do my best; but I might be wrong in my construction of the law.

986. *Chairman.*] We are not questioning that. We have no doubt you were doing your best for him; but you told him that his was a case for the Supreme Court, and what you meant him to understand was that there might be a case, but that he could not get a hearing for it in the Warden's Court, because the Warden's Court was not the proper place. That is the inference to be drawn from what you say? Well, hardly, because I regard it as altogether a Supreme Court case, and not a proper case for the Warden's Court. It was a very difficult case, and I thought it would be better heard in the Supreme Court, and thrashed out there, than in the Warden's Court.

987. That is what I mean. We have a certain amount of evidence before us now that you did give Mr. Reid some advice—I will not say absolute advice—but that you said something in the morning that led him to try the Warden's Court in the first instance? I am quite sure I did not do that. I advised him against the Warden's Court from start to finish.

988. That opinion was, under the circumstances, an erroneous one, because we see that Mr. Reid did bring the case in the Warden's Court eventually. Did you advise him that he could not get an entrance and a hearing, or did you advise him that it would be contrary to his interests to go into the Warden's Court? Certainly not. I did not advise him that he could not get an entrance or a hearing in the Court; but I regarded the Supreme Court as the proper Court to go to. Further than that, I said that if he wished to go to the Warden's Court, I would take the case there and do the best for him.

989. *Chairman.*] I see the point now; you told him in the course of your conversation, that he could go into the Warden's Court if he liked? I should very probably say that. I would very probably say "If you like to go into the Warden's Court I will take it there for you." That would be a natural thing.

990. *Mr. Richards.*] If the difficulty had been one between rival mining parties, would you have advised a Supreme Court action or an ordinary case of dispute before the Warden. If, instead of the Banking Company being in it, the people not giving delivery of these tenements had been miners holding miner's rights, would you have advised a Supreme Court action or taking a case before the Warden? I think I should have gone then to the Warden's Court, because we should then have been dealing with miners strictly. But my trouble is that I cannot bring to mind the exact point upon which I was consulted. I have scrupulously avoided trying to bring the thing to my mind by means of any outside influence, because I desire to give my own recollection, without prompting, as to the interview. I cannot bring back the point upon which Mr. Reid consulted me, as my diary is only very vague.

991. *Mr. Close.*] Perhaps you would explain what you mean by saying that Mr. Reid had no case for the Warden's Court, but that if he wished to go to the Warden's Court you would try it for him;—do you not see the inconsistency between the expressions? I have already explained that I gave him good advice, but that if he would not take that, and still wished me to act for him in the Warden's Court contrary to advice, I would do so. I see no harm in that.

992. What was your idea in going to see Mr. Maitland and getting Mr. Reid to remain until you returned? I am not aware that Mr. Reid did remain until I returned.

993. We have the fact that a receipt was given for your fee, and that the receipt could only be given in the office, and further that the receipt was given by you. Now I ask what was your reason for going to Mr. Maitland after seeing Mr. Reid? Simply that I very often consulted Mr. Maitland on mining matters as I had great faith in his judgment and I was fond of talking over points with him for my own benefit.

994. You did not go to him for the purpose of consulting him about this case of Mr. Reid's? Not in reference to Mr. Reid's benefit.

995. I mean with reference to the case? No, not with reference to this particular case. I was calling in, and I found that I was confirmed in my opinion by Mr. Maitland.

996. You admit that you put before him an "A-B" case, and that the "A-B" case was Reid's case? Yes.

997. And that Mr. Maitland discovered that it was Reid's case? Yes.

998.

W. D.  
Downing.  
17 Oct., 1900.

998. And therefore you went there and discussed Reid's case with him? I discuss many cases with Mr. Maitland.
999. But that day you went there for the purpose of discussing what you did discuss, or otherwise you would not have gone there;—do you see what I mean? Yes.
1000. *Mr. Richards.*] That is an ordinary course in a country town? A most ordinary course. We regard Mr. Maitland as an authority upon a very difficult Act, which no one seems able to explain.
1001. *Mr. Close.*] But if you gave your advice as final in the morning, the 10s. 6d. would have been paid there and then, but it was not until you returned from Mr. Maitland that the fee was paid? That does not follow at all. We do not get our money cash down in that way.
1002. *Mr. Richards.*] Can you remember whether Mr. Reid was asked to remain until you came back;—that you left the office on the understanding that he was to wait until you returned? No, I cannot remember that; what is more likely is that Mr. Reid said, "I will come back in the afternoon and pay your fee."
1003. *Mr. Cook.*] What is the nature of the advice you gave Mr. Reid in the morning? The nature of the advice I gave in the morning was that, in my opinion, the point upon which he consulted me should be should be thrashed out in the Supreme Court rather than before the Warden. I did not think that he had a case before the Warden.
1004. At the afternoon consultation your advice was of the same purport as at first? Yes; and if he had wished me to take the case into the Warden's Court, of course I would have done it.
1005. *Mr. Richards.*] Supposing that you were to conduct that case on behalf of Mr. Reid in the Warden's Court, and you were to fail to ask the question as to whether he had a miner's right, would you have expected the Bench to ask that question? I have been thrown out of Court on that very point on one occasion, and I invariably ask the question.
1006. You throw the onus of asking that question on the solicitor? Yes; I lost a case on that very point. The point was taken against me that the miner's right was never produced.
1007. *Mr. Close.*] Is it not the rule that before a case can be gone into the miner's right is asked for, because otherwise the party has no *locus standi* in the Court? No; but when the opposing party gets up after the applicant's case has been closed, and the miner's right has not been produced, you are put out of Court.
1008. Will the Warden take evidence without the production of the miner's right? It was done in my case.
1009. Have you ever known the merits of a case to be entered into before the production of a miner's right? I remember my own unfortunate case to which I have already referred. The miner's right is sometimes produced later on in the case.
1010. Have you known that to happen? Yes.
1011. Would that be in consequence of the forgetfulness of the Warden, or of the solicitor who was instructed? I could not say, but I would assume that it was forgetfulness on the part of the solicitor.
1012. Or on the part of the Warden, in not asking for the miner's right? I do not know what the duties of the Warden are, but I think it is the duty of the solicitor to bring the matter properly before the Court, or he will run the risk of losing his case.
1013. I suppose you would consider that a case of gross negligence? I felt very sorry when I lost my case.
1014. *Mr. Richards.*] Was it an oversight in your case? Yes, it was. It was my first case under the Act.

William Stewart McAlister sworn and examined:—

W. S.  
McAllister.  
17 Oct., 1900.

1015. *Chairman.*] Where do you reside? Summer Hill.
1016. And what is your profession? I am a mine manager and mining engineer.
1017. Do you know the Brindabella Mine, near Queanbeyan? Yes.
1018. What connection have you had with it? I was working there for nearly two years—between one and two years.
1019. In what capacity? First of all I was taking the levels of the tunnel, and then I was working in the tailrace tunnel, and afterwards as nozzle-man.
1020. Employed by whom? By the Company.
1021. What date was this? I could not give you the date from memory; it was when the sluicing was going on.
1022. *Mr. Colonna Close.*] That is when the Company was formed? It was about ten or eleven years ago.
1023. *Chairman.*] How many men were employed there then? At that time, about fifteen or sixteen.
1024. *Mr. Richards.*] Were you working in shifts? Yes; first of all there were three shifts, and then there were two shifts, working ten hours each, so that we worked for the twenty-four hours just the same.
1025. *Mr. Cook.*] Is that where you made your rise? No; I did not make any rise there.
1026. *Chairman.*] What was the general character of the mine from the productive standpoint? The returns from the wash sluiced away while I was there were poor.
1027. *Mr. Richards.*] What do you call poor—how much did you get for the load? Something about 1 grain to the load or less.
1028. *Chairman.*] It is difficult to form an estimate of what that means?
- Mr. Cook:* A couple or 3 grains will pay in dredging.
- Mr. Maitland:* Two grains would pay expenses in this case.
- Witness:* We sometimes went down as low as half a grain.
1029. *Chairman (to witness).*] How long were you there altogether? Somewhere between one and two years; it was considerably over a year, I know. It is so long ago that I am not quite clear. In reference to the returns, I made some notes from my notebook. I always made it a point to keep notes of matters of interest in connection with any mine upon which I might be at work, and I can give you something pretty close to the returns from the mine.
1030. How did you get this knowledge in the first instance? I kept the Company's books while I was there, and I made the notes in a notebook at the time for my own information, and I afterwards made notes from that book.
1031. These notes you have here are not the original ones? No; I copied them from the original notebook into the one I have here.

W. S.  
McAllister.  
17 Oct., 1900.

1032. Have you the original book? I have not got it here.
1033. Where is it? It is at Summer Hill; there is no more information in than I have here, as this is an exact copy of the original; I could bring it here if you desired it.
1034. *Mr. Cook.*] It would be very much better to have the original? Very well, I can bring it for you.
1035. *Mr. Richards.*] I suppose it is very much like other note-books? Yes; it is all scattered, and the items are pretty well mixed up with other information. I could give you the returns from the mines roughly from memory.
1036. *Chairman.*] You had better give them to us from memory? I know that the first clean-up we had produced about 72 to 75 oz. of gold.
1037. *Mr. Cook.*] What amount of work did that represent? I think the work was carried on for nearly three months. It was intermittent; that is to say, the sluicing was not continuous.
1038. How many men were working there altogether? There were about fourteen or fifteen men altogether.
1039. *Chairman.*] You say they were not working continuously during that three months? They were not sluicing continuously, but other work was going on during that time.
1040. *Mr. Cook.*] That would give about £20 a man for fifteen men for three months' work? Yes.
1041. *Chairman.*] Have you any recollection of the later cleaning up? Yes, the next three months gave about 40 oz. of gold; I could not say just exactly.
1042. *Mr. Thomas.*] Were the same number of men working? Yes; about the same number of men. I think there were a few more men put on for some purpose.
1043. *Mr. Cook.*] What is your opinion of the whole thing; as to its value as it was then? As it was then, with the work we were doing, it was distinctly unprofitable.
1044. Did you regard it as promising anything better;—what do you think of it now? I do not know anything of it now; I have not seen it since I was working there, except that I once called in casually to see the mine.
1045. If it had been your own mine on the showing it made at the time, would you have stuck to it or tried to get out of it? I should have got out of it at once without trying.
1046. *Mr. Thomas.*] You would have been prepared to float it into an English company? Yes, or anything of that kind.
1047. *Mr. Richards.*] You would not have advised your friends to touch it? No.
1048. *Mr. Close.*] You would not have advised your father to pay £700 for it? No.
1049. And yet you know that he did offer to do so? I know nothing of the sort.
1050. Were you not present when your father offered £700 for the mine at Land's hotel? No, I was not.
1051. Are you aware that your father ever did offer £700 for it? I have no recollection of his ever having made an offer for it.
1052. Will you swear that he did not offer that money for the mine? No, not by any means.
1053. Would you swear that you did not know, and that you did not, in fact, hear your father offer £700 for the mine? Most decidedly. I did not know that he ever offered £700, and I never heard him offer it.
1054. You kept the books at the mine? Yes.
1055. I think you entered into the service of the company when the Goodradigbee Company commenced sluicing? Yes.
1056. Do you happen to know that £12,000 was called up in shares in that mine? I believe it was something like that.
1057. Do you happen to know that it was alleged that £5,000 had been spent upon the mine? Yes; I believe that amount was spent on the mine.
1058. Do you happen to know that the plant itself cost £500? I think it cost somewhere in that vicinity—I am not sure.
1059. Now, your father was manager of the mine? Yes.
1060. That was, from the time you began working on the mine? Yes; he was manager for a considerable time before I went there.
1061. That would be manager of the Brindabella mines? It was the same thing.
1062. Was he not the manager from the commencement of the Goodradigbee Mine? I cannot say, as I do not know the difference between one and the other—it is all the one claim to my mind.
1063. He was there when the Goodradigbee Company was started? Yes.
1064. These cleanings up you were speaking about were from the strippings, were they not? They were from the stuff taken down to the complete depth that we were working to.
1065. But they were the strippings, were they not? We did not look on them as strippings; but the stuff was taken to a depth of something like 60 feet.
1066. You did not bottom the mine? The directors of the mine considered that they were on the bottom.
1067. If a professional geologist went to view the mine and swore that it was not bottomed, would you still be of opinion that it was bottomed, because the directors thought it was? I do not know that a geologist would know anything more about it than any other man unless a shaft had been sunk to determine whether there was any wash below or not.
1068. You did not consider that you were washing up the strippings? No. I call the strippings the useless part of the stuff that has to be cleared away to get at the wash.
1069. Then you consider the mine was bottomed? I do not know whether we were on the true bottom or not, but there was a bottom of some description.
1070. What sort of a bottom? Lignite or clay.
1071. You do not know whether it was the true bottom;—but they considered it as a true bottom of lignite? They considered it was the true bottom, but I do not know whether it was or not.
1072. But you have had considerable experience in mining matters? Yes; but I would not care to give my opinion unless a shaft were carried down to show whether there was wash underlying the lignite or not.
1073. Is it usual to employ fifteen or sixteen men on a mine when the first cleaning up of the wash only yields 73 to 75 oz. for the first three months' work? It is done very frequently.
1074. Would it be the usual thing to continue to employ the same number of men, or more, during the next three months, under the circumstances you have mentioned? It is the usual thing to employ the number of men necessary to carry on the work of the mine. The number of the men does not depend always upon the character of the return.

- W. S. 1075. Then I suppose fifteen or sixteen men were required to work the mine? Yes, about that.  
 McAllister. 1076. You say that for the second three months' work the returns only amounted to about 40 oz. gold?  
 I think so.  
 17 Oct., 1900. 1077. After such a poor yield for the first three months, how was it that additional men were taken on, if only fifteen or sixteen men were necessary to work the mine? I think that the reason why the extra men were put on was that there were some slips in the head-race, and that it took a considerable number of men to effect repairs.  
 1078. *Mr. Cook.*] You had no shaft there? No.  
 1079. You sluiced all the stuff out? Yes; the head-racing was some 2 or 3 miles from the claim, where the head of water was brought down from the river.  
 1080. How did you work the mine? It was an open cut, and all the tailings went from the mine through a tail-race tunnel into the river.  
 1081. In a flume? No, there was no fluming in the tail-race.  
 1082. Was there no fluming at all? In connection with the head-race there were flumes.  
 1083. Supposing that in July, 1891, the fluming and head-race and all things were in comparatively good order, and they were allowed to remain untouched for seven months, how would you value the mine at the end of seven months' period, as compared with its original value? I do not know. If it were untouched, and everything were in precisely the same state, I presume the value would be the same.  
 1084. Supposing the head-race were cut off and the flumes were all destroyed, and the tunnel had fallen in at the end of seven months, what would then have been the value as compared to the value of the mine at the time it was fairly perfect? The value of the mine would have been deteriorated to the extent of the money which would have been required to put it in proper order again.  
 1085. *Chairman.*] You could not say anything as to the extent of the damage without seeing it? No.  
 1086. *Mr. Close.*] When did you see Mr. Maitland? Yesterday afternoon.  
 1087. When did you make the copy of your notes from your note-book? This morning.  
 1088. You might easily have brought the original notebook instead of this copy? It would have been a considerable trouble.  
 1089. But it was no trouble to take the notes from it? There was much less trouble in doing that.  
 1090. *Chairman.*] Why would it have been a trouble for you to have brought your original note-book in? It is a fairly bulky book, and I would have had to carry it in my hand, whereas I can carry in my pocket the book into which I copied the notes.  
 1091. *Mr. Close.*] Did you take these notes on the suggestion of Mr. Maitland? No.  
 1092. How did you come to have these notes at all? Mr. Maitland intimated to me that I would probably be required to give some evidence in connection with the Brindabella Mine, and as I was rather doubtful about dates, and so on, and the yields from the clean-ups, I thought I would look the matter up.  
 1093. How did you know that was the kind of evidence Mr. Maitland wanted you to give? I did not know that that was the kind of evidence I would be called upon to give, but it was the only evidence I could give, and if it was not that sort of evidence that was wanted, I could not give any.  
 1094. Having kept the books, do you happen to know what was done with the balance of £7,000 over and above the £5,000 that was spent on the mine? I did not say there was £5,000 spent upon the mine.  
 1095. But you agreed with me when I said there was? I know there was £5,000 spent on the mine, but I thought there was considerably more.  
 1096. Can you tell me what was done with the other £7,000? I cannot; I presume it was spent on the mine, but I do not know.  
 1097. If you kept the books would you not know that not a single half-penny more than £5,000 was spent on the mine? I do not know that even that was spent on it. I do not know anything about the amount that was spent on the mine, but I believe there was considerably more than £5,000 spent there. I am not sure, however, whether it was £5,000 or £500.  
 1098. You do not know what became of the balance? No, I do not.  
 1099. *Mr. Maitland.*] I believe that when I was in the district you saw a good deal of me? Yes.  
 1100. We travelled about a good deal together? Yes.  
 1101. And you were with me when I was amongst the miners? Yes.  
 1102. Do you know, as a matter of fact, that the men were constantly coming to me for advice? I know that they went to you very often.  
 1103. We went to Gundaroo twice, did we not? Yes.  
 1104. You made application for some land at Dairy Creek? Yes.  
 1105. And you also had a lease at Bywong? Yes.  
 1106. *Mr. Close.*] Did you get that land that you applied for? Yes.  
 1107. *Mr. Maitland.*] Of course, you have come to me for advice often enough? Yes.  
 1108. I suppose you sometimes acted upon it and sometimes you did not? Yes; but I think I have almost invariably acted on your advice. I do not recollect any particular case in which I did not.

THURSDAY, 18 OCTOBER, 1900.

Present:—

MR. COOK,

MR. THOMAS.

MR. RICHARDS,

W. A. HOLMAN, Esq., IN THE CHAIR.

Mr. Colonna Close, instructed by Mr. A. C. Roberts, appeared as Counsel for Mr. Reid.  
 Mr. E. L. Maitland appeared in person.

William Reid recalled and further examined:—

- W. Reid. 1109. *Mr. Close.*] Did you take any steps in consequence of the delay of the transfer, or bring any action?  
 Yes.  
 18 Oct., 1900. 1110. What steps were they? I called upon Dulhunty. 1111.

W. Reid.

18 Oct., 1900.

1111. Did you call upon or see anybody else? I called next on Davidson.  
1112. What was your reason for that? To bring an action against the Bank.  
1113. For the delay? Yes.  
1114. After you were in legal possession did you take any steps in consequence of the loss you had sustained after the transfer? I called upon Mr. Davidson again.  
1115. What did Mr. Davidson say to you? He said I had no remedy against the Bank. He said as I had given them a mortgage for the property I would have to be contented.  
1116. Did you ever take any steps after that? Not till 1895, when I saw the Warden.  
1117. How was it you then came to take steps? Because I learnt that Davidson was deceiving me.  
1118. How did you learn that? I saw Mr. O'Brien, and he told me I had a good case for the Warden's Court.  
1119. Was this the first time you understood that? Yes; till I saw Mr. O'Brien I thought I could do nothing.  
1120. *Chairman.*] You thought Mr. Davidson was right in his law? Yes.

1900.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## DEPARTMENT OF MINES AND AGRICULTURE.

(REPORT OF THE STOCK AND BRANDS BRANCH FOR THE YEAR 1899.)

*Printed under No. 4 Report from Printing Committee, 12 July, 1900.*

The Under Secretary for Mines and Agriculture to The Secretary for Mines and Agriculture.

Sir,

I have the honor to submit the report of the Chief Inspector of Stock for the year 1899, which shows a decrease in horses, cattle, and sheep, owing to the continued severe drought.

## Mr. Government Veterinarian Stewart's Report.

This, which contains interesting and useful information, will be found as Appendix C.

## Inspectors' Work.

The inspections made by the staff number 54,009, exclusive of the inspections of Queensland cattle on the Border—rather more than usual—which include horses, cattle, sheep, dogs, pigs, and inspections of pounds, commons, &c., and in this work Inspectors travelled an average of 4,460 miles each. 443 prosecutions took place under the different Acts, and 383 convictions were obtained.

## Horses.

The number of horses in the Colony at 31st December last was 449,467 being a decrease of 522 on the previous year.

Horses have been exceptionally free from disease since the commencement of the present year. There has been an export of horses to South Africa and India of about some 10,000 head. Parasitic blindness was reported from four districts, but yielded to treatment.

## Cattle.

The cattle decreased through the continued drought to the extent of 83,693, and now stand at 1,802,697.

Anthrax has been more prevalent than usual.

Several districts report pleuro-pneumonia. Cases of tuberculosis have been met with in most of the districts, and the cattle were destroyed.

## Tick Plague.

It is very satisfactory to learn that, up to this time, the tick has made no further advance towards our Border than it had at the date of last report, although the country between Brisbane and Bundaberg is becoming more closely infested.

No effort is being spared on our part to prevent the pest from entering this Colony, and with that object in view the most dangerous portion of the Border has been fenced. No stock except horses in actual work, which are smeared, are allowed to cross, and the whole of the Border from Brenda to Tweed Heads

179—A

is

[2710 copies—Approximate Cost of Printing (labour and material), £40s. 13s. 10d.]

is regularly and frequently patrolled. Where, again, cattle and loose horses are admitted, they are closely examined in a crush before being admitted. As, however, there are so many ways in which the ticks may be introduced, ample preparation has been made for inoculation for tick fever, should that disease approach the Border.

### Sheep.

The returns show a shortage of 5,027,490 on the previous year. This is a heavy decrease, but not so great as was feared, and it is, of course, due to the continued drought.

A careful classification made of the different breeds shows the total number of merinos to be 33,283,674, comprising 24,447,264 combing, and 8,836,410 clothing; long-woolled sheep number 1,058,082, and cross-breds 1,871,758, making, together, 2,929,840.

Of all descriptions, the grand total at 31st December last, was 36,213,514.

During the year 129 stud rams and ewes were imported from London, America, and Germany, and passed the prescribed quarantine.

It will be seen that nearly the whole of the sheep are now paddocked, and that their quality is reported as improving in those portions of the Colony where the effect of the drought has not been so severely felt.

### The Lambing.

The actual lambing for the whole Colony was estimated at 49 per cent. The spring lambing gave 70 per cent., and the autumn and winter lambing 43 and 48½ respectively.

### The Clip.

3,269,462 lambs were shorn in the grease, and 142,950 washed; while 29,352,299 sheep were shorn in the grease, and the wool of 1,805,213 was scoured.

The average weights of the clip are estimated as follows:—

							Lambs. lb. oz.	Sheep. lb. oz.
Grease	...	...	...	...	...	...	2 1½	6 0
Scoured	...	...	...	...	...	...	1 0½	2 8¾

The total clip for the Colony is estimated at 187,704,301 lb., being a decrease of 36,264,532 lb. on the year 1898.

Of the total mentioned, 150,566,639 lb. are estimated to have been sent to Sydney, 30,534,788 lb. to Melbourne, 6,423,806 lb. to Adelaide, and 179,018 lb. to Brisbane.

The sheep were comparatively free from disease during the year. Outbreaks of anthrax still occur in some districts, but owners are vaccinating with decided success, and the deaths from this deadly disease are decreasing.

It is very satisfactory to report that the sheep in the whole of the Colonies, including Tasmania and New Zealand, are now free from scab.

### Pigs.

The number of pigs in the Colony is 239,973, a number very far short of what there ought to be.

### Dogs.

Fifty-six dogs were quarantined during the year, but of these twenty-one were "ships' dogs," and only remained in quarantine until the vessels to which they belonged left the port, and five "ships' dogs" were destroyed.

### Travelling Stock Reserves.

Owing to the continued drought many of these reserves were quite bare of grass, and as it assumed serious proportions, travelling in many cases became impossible, and the sheep perished on their runs.

The advisability of withdrawing the principal travelling stock reserves from lease, and making proper provision for their protection, is every day more apparent, and is a subject demanding early and serious consideration.

Registration

### Registration of Horse, Cattle, and Sheep Brands and Marks.

About the average number of brands were registered during the year, and the total number of Horse and Cattle Brands registered since the Act came into force in 1866 up to 31st December last, was 81,392, and the number of sheep brands were as follows :—Fire-brands, 5,976; tar-brands, 23,460; and ear-marks, 14,559.

### Public Pounds.

There are 324 pounds open. They are periodically inspected, with the result that there are now very much fewer complaints in regard to the conduct of pounds than formerly.

### Noxious Animals.

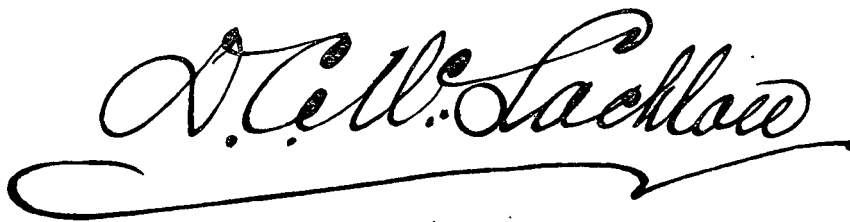

The receipts under the Pastures and Stock Protection Acts during 1899 reached £27,700 10s. 10d., while the amounts expended by the different Boards in the Colony for scalps of animals destroyed, and other expenses, amounted to £33,078 14s. 11d.

In only four districts were the full rates of assessment levied.

The number of the different animals destroyed, and paid for, is shown in Appendix M to this Report.

The Boards are still urging the consolidation of the Pastures and Stock Protection and other Acts.

Among the Appendices, some interesting information is given with regard to Inoculation for Tick Fever, and other subjects of interest to pastoralists.

Under Secretary, Department of Mines and Agriculture.

## The Chief Inspector of Stock to The Under Secretary for Mines and Agriculture.

Department of Mines and Agriculture, Stock and Brands, Sydney, 1 July, 1900.

Sir,

On the 1st February last I submitted a Progress Report for the year ending 31st December, 1899, giving the approximate number of the horses, cattle, and sheep then in the Colony; and I have now the honor to submit for your consideration my complete Report for that year on the working of this Branch, which is, as usual, based very much upon Inspectors' estimates, owners still showing very little inclination to furnish data. It will be seen that there is a very large decrease in the number of all descriptions of stock. This has been caused by the continued drought from which it may be said the whole of the Colony has been suffering. The losses were severest in the Western and Central Land Divisions, but they were heaviest in the Western. In these divisions, again, the loss was heaviest in the northern portion of the Western Division, and in the centre of the Central Division. It was also that portion of the Eastern Division which suffered most.

I have, &c.,

ALEX. BRUCE,

Chief Inspector of Stock.

### ANNUAL REPORT BY J. D. STEWART, M.R.C.V.S., GOVERNMENT VETERINARIAN.

This will be found in Appendix C. At the time when the last annual report was published, Mr. Stewart had made the necessary preparations, so far as the Grafton and Tweed, Lismore, and the eastern portions of the Casino Districts are concerned, for commencing to inoculate the young cattle in the northern portion of the Richmond and Tweed River Districts against tick-fever immediately there was a sufficient growth in the pasture to provide an ample supply of food for the cattle while recovering from the effects of inoculation. But from the information afterwards obtained, while the Tick Commission was sitting, it was seen that inoculation might safely be deferred until ticks were in the neighbourhood.

For this reason, nothing has as yet been done in general inoculation, and Mr. Stewart has, with the assistance of Mr. Veterinary-Surgeon Vyner, of Armidale, been devoting a considerable portion of his time to the establishment of the necessary number of Salting Stations in the Tenterfield and western portion of the Casino Districts, so as to be fully prepared should the Ticks approach the Border, to at once commence inoculation; and with the view to that being properly carried out, two of the applicants for appointment as Inspectors of Stock, Messrs. Ellis and Elliott, who hold the certificate of the Stock Board of Examiners, have received special training by Mr. Stewart, and will, when required, be prepared to inoculate.

Mr. Stewart has also rendered Dr. Tidswell considerable assistance in preparing the cattle taken to Rockhampton for the test of the efficacy of inoculation, as well as during the whole of the time it was being made there, and which Dr. Tidswell has fully acknowledged.

The information with regard to ticks maturing on horses to the extent mentioned in Mr. Stewart's Report is rather disquieting; and the sooner the question whether ticks which have matured on horses can propagate their species, and, if so, whether tick-fever can be conveyed by such ticks is settled the better, for horses from infested country are constantly on the move, and frequently for long distances, into the Buffer area; and if either of these theories should be established the risk of their bringing ticks, if not tick-fever, to our Border would be greatly increased.

When not engaged on Tick work, Mr. Stewart's time has been occupied in visiting the districts in which disease appeared, which the Inspectors for the Districts were unable to diagnose, and to a considerable extent also in answering questions connected with diseases and their treatment asked through the post.

He has also examined numerous morbid specimens, and has offered some practical advice in regard to the manner in which they should be forwarded, to which it is hoped both inspectors and owners will carefully attend.

It will be seen also that Mr. Stewart has in hand or in view very necessary investigations with regard to ailments with which the stock in several parts of the Colony are affected.

As Mr. Stewart examined a large proportion of the horses purchased in Queensland by Major Thompson for the Imperial Government, he was asked to add to his Report a short description of these horses for the information of our horse-breeders, and it is published with the rest of his Report; for although there is, happily, a prospect of a speedy termination to the war in South Africa, good horses will always be in demand for India; and it is hoped, with the reputation the Australian horse has got during the war, that they will be in demand also in the United Kingdom.

INSPECTORS'

INSPECTORS' WORK.

The Colony is now divided into sixty-five Sheep Districts, and there are fifty-two Staff Inspectors employed, who have made the following inspections during the year 1899 :—

Stock, including horses, cattle, and sheep	...	...	...	...	...	...	30,706 inspections.
Reserves	...	...	...	...	...	...	6,606 "
Public Pounds	...	...	...	...	...	...	437 "
Commons	...	...	...	...	...	...	882 "
Dogs	...	...	...	...	...	...	1,140 "
Pigs	...	...	...	...	...	...	3,943 "
Under Pastures and Stock Protection Act	...	...	...	...	...	...	7,022 "
Under Public Watering-places Act	...	...	...	...	...	...	2,174 "
Under Diseased Animals and Meat Act	...	...	...	...	...	...	1,099 "
Total	...	...	...	...	...	...	54,009 "

being an average of 1,038 inspections by each Inspector.

The total number of stock inspected was,—105,985 horses, 628,026 cattle, and 19,172,474 sheep. This shows a decrease of 12,037 horses and 304,376 cattle, and a decrease of 2,191,067 sheep inspected during 1899, as compared with the previous year. This is exclusive of the inspections made by the Inspectors stationed along the Queensland Border.

*Flemington Sale-yards.*

As usual, the whole of the stock arriving at these yards were carefully inspected on each sale-day by an Officer of the Board of Health and an Inspector of Stock, and a considerable number were condemned as unfit for human consumption. The numbers of stock submitted to auction were as follows :—

Cattle, 104,681 head.  
 Sheep, 2,163,704 head,—

a weekly average of 2,013 cattle and 41,609 sheep. Compared with 1898, this is an increase of 169 cattle and 10,165 sheep per week. These inspections occasionally lead to the detection of stolen stock, as the Inspector's duty requires him to compare the brands and marks on the stock with those in the permits and travelling-statements accompanying them, which are filed in this office for reference by persons inquiring about stock supposed to have been stolen, and the identification of the owners of animals condemned at the abattoirs. Some of the permits and travelling statements collected by the Inspector at Flemington are still imperfect, especially as regards the brands and marks, and are useless in tracing stock or for production in a court of law. Should this continue the Inspector will be compelled to prosecute for non-compliance with the Act and Regulations.

*Inspectors' Mileage.*

During the past year the staff travelled over a distance of 231,923 miles while on duty, an average of 4,460 each per annum, or an increase of 131 miles.

*Prosecutions and Convictions obtained.*

Under what Act.	No. of Prosecutions.	No. of Convictions.
Diseases in Sheep Acts	74	66
Imported Stock Acts...	4	4
Registration of Brands Acts	14	8
Pastures and Stock Protection Acts	275	242
Public Watering-places Act...	58	50
Impounding Acts	5	4
Diseased Animals and Meat Act	13	9
Total	443	383

Attention is again called to the neglect on the part of the Pastures Boards to compel defaulting owners to destroy the noxious animals on their holdings. If compulsion after caution was brought to bear on defaulters to a moderate extent by the Boards—and moderate compulsion can hurt no one seriously—simultaneous action would be brought about, and something like value for the money now expended would then be obtained, while the pest would, year by year, be reduced.

It is noted that a number of the Pastures and Stock Protection Boards in the south-eastern portion of the Colony are combining for the purpose of fixing uniform rates of bonus to be paid for noxious animals destroyed in their Districts. This no doubt is a step in the right direction, and it is hoped that similar action will be adopted by other Boards where the nature of the country and other circumstances warrant such a course, as it will tend to put a stop to the practice of introducing and passing off for payment scalps in one district which actually belong to another, simply because a higher rate of bonus is paid for them.

HORSES.

HORSES.

The number of horses in the Colony during the thirty-nine years previous to and including 1899 was as follows :—

Year.	No.	Year.	No.	Year.	No.
1861 ... ..	251,497	1874 ... ..	334,462	1887 ... ..	390,609
1862 ... ..	233,220	1875 ... ..	357,697	1888 ... ..	411,368
1863 ... ..	273,389	1876 ... ..	366,703	1889 ... ..	430,777
1864 ... ..	262,554	1877 ... ..	328,150	1890 ... ..	444,163
1865 ... ..	284,567	1878 ... ..	336,468	1891 ... ..	459,755
1866 ... ..	282,587	1879 ... ..	360,038	1892 ... ..	481,416
1867 ... ..	278,437	1880 ... ..	395,984	1893 ... ..	481,399
1868 ... ..	280,201	1881 ... ..	398,577	1894 ... ..	500,068
1869 ... ..	280,818	1882 ... ..	328,026	1895 ... ..	482,459
1870 ... ..	280,304	1883 ... ..	326,964	1896 ... ..	484,028
1871 ... ..	337,597	1884 ... ..	337,172	1897 ... ..	466,813
1872 ... ..	304,100	1885 ... ..	344,697	1898 ... ..	449,989
1873 ... ..	328,408	1886 ... ..	361,663	1899 ... ..	449,467

being a decrease of 522 horses on the number returned for the previous year, which is accounted for by the severe drought which prevailed nearly over the whole Colony, less breeding, consequent on low prices and use of bicycles.

The number of horses as returned in each Sheep District of the Colony will be found in Appendix A, as also the number of cattle, sheep, and pigs.

Breed of Horses.

Under this head the Inspectors' returns give the different breeds of horses as follows :—

	Ordinary.	Thoroughbred.	Total.
Draught ... ..	121,081	17,343	138,424
Light harness ... ..	106,301	12,360	118,661
Saddle ... ..	167,420	24,962	192,382
Grand Total ... ..			449,467

Australian and Foreign Horses Introduced and Imported.

*Australian Horses—From other Australian Colonies.*—By sea: 40 stud horses; ordinary horses, 322. Overland: 28 stud horses, 11 stud mares, and 4,628 ordinary horses; total, 5,029.

*Foreign Horses.*—During the year 23 horses were imported from Great Britain and Ireland and other countries, and were subjected to the prescribed quarantine of fourteen days in Sydney before being allowed to go inland. Particulars as to number and breed of these horses are as follows :—

Name of Importer.	Address.	Where from.	Breed.										
			Thoroughbred.		Draught.		Trotting.		Arab.		Donkey.	Total.

Horses fit for Sale, number Exported, Improvement, &c.

In the several districts of the Colony, Inspectors' reports show that there are 17,571 draught, 18,656 light harness, and 31,802 saddle horses fit for market, while of this number 18,975 are considered suitable for requirements of India and China.

During the year 11,396 horses were exported, principally to India, Victoria, Queensland, New Zealand, Western Australia, and Fiji. Since the 1st January, 1900, over 10,000 horses have been shipped from Sydney and Newcastle to South Africa.

Reports

Reports from thirty-seven districts say that the horses are improving, owing to introduction of improved sires.

In twenty-two districts there is no improvement, while in six districts they are reported as deteriorating.

#### *Tax on Stallions.*

A tax on stallions is still asked for by owners, and, in the interest of horse-breeding generally, is I think highly desirable. Stallions should be registered and certified by a Veterinary Surgeon as sound.

### DISEASES AND AILMENTS OF HORSES.

#### *Blindness in Horses.*

From four districts, principally on the Darling, horses to the number of 142 are reported as having been affected with parasitic blindness; but the ailment has yielded to the treatment prescribed by the Department, which will be found on page 6 of Report for 1898.

#### *Australian String-halt in Horses.*

The horses in three districts are reported as having been affected with this ailment during the year.

The majority of the horses, however, recovered when the spring set in. For treatment of this disease see page 6 of Report for 1898.

#### *Influenza.*

This disease is reported to have affected the horses in one district. For its character, symptoms, and treatment, see page 21 of Report for 1898.

#### *Ophthalmia.*

This disease has been reported from one district as affecting the horses during the year. Its nature, and treatment as recommended by the Department and applicable to all stock will be found on page 22 of Report for 1898.

The skin disease (*prurigo*) is reported from two districts; and anthrax from one district.

With the exception of the above ailments the horses throughout the Colony have been exceptionally free from disease during the year.

Owners are cautioned, where their stock are not removed from the paddocks where poisoned pollard is laid for rabbits, that they should see that the pollard pellets are small, as both horses and sheep are liable to pick them up when laid large.

The estimated losses in horses during the year from various causes, principally through drought, amount to 22,737.

### CATTLE.

The returns of cattle in the Colony during the thirty-nine years ending 31st December, 1899, stand as follows:—

Year.	No.	Year.	No.	Year.	No.
1861 ... ..	2,271,923	1874 ... ..	2,856,699	1887 ... ..	1,575,487
1862 ... ..	2,620,383	1875 ... ..	3,134,086	1888 ... ..	1,622,907
1863 ... ..	2,032,522	1876 ... ..	3,131,013	1889 ... ..	1,741,592
1864 ... ..	1,924,119	1877 ... ..	2,746,385	1890 ... ..	1,909,009
1865 ... ..	1,961,905	1878 ... ..	2,771,583	1891 ... ..	2,046,347
1866 ... ..	1,771,809	1879 ... ..	2,914,210	1892 ... ..	2,147,074
1867 ... ..	1,728,427	1880 ... ..	2,580,040	1893 ... ..	2,155,500
1868 ... ..	1,761,411	1881 ... ..	2,597,348	1894 ... ..	2,290,112
1869 ... ..	1,795,904	1882 ... ..	1,859,985	1895 ... ..	2,023,768
1870 ... ..	2,195,096	1883 ... ..	1,640,753	1896 ... ..	2,043,707
1871 ... ..	2,014,888	1884 ... ..	1,425,130	1897 ... ..	1,966,729
1872 ... ..	2,287,660	1885 ... ..	1,317,315	1898 ... ..	1,886,390
1873 ... ..	3,794,327	1886 ... ..	1,367,844	1899 ... ..	1,802,697

From the above it will be seen there was a decrease through the severe drought of 83,693 cattle during the year 1899, but an increase of 61,105, as against the decennial year 1889.

The number of cattle in each of the Sheep Districts of the Colony will be found in Appendix A.

The number of cattle imported from other Colonies during the year was 172,016, and the number exported was 26,771, being an increase in the number imported over that exported of 145,245; of which 165,934 came from Queensland.

#### *Breeds of Cattle.*

	Pure and Stud.	Ordinary.	Total.

Holstein and Shorthorn	...	...	...	...	...	15
Unrecognisable	...	...	...	...	...	314,587
Total	...	...	...	...	...	864,367

*Australian Cattle Introduced and Imported.*

AUSTRALIAN CATTLE.—*Overland*—252 stud bulls, 21 stud cows, 171,501 ordinary cattle; total, 171,774.

*By Sea*—241 stud bulls and cows.

*Foreign Cattle Imported.*

During the year 1 Jersey bull was imported from England by R. L. Tooth, Esq., of Sydney, which underwent the prescribed term (forty days) of quarantine before being removed inland.

*Ports for Shipment.*

In August, 1899, Liverpool was notified as an additional port from which stock from Great Britain and Ireland can be shipped for this Colony, and Messrs. J. and H. Sumner have been appointed Veterinary Surgeons to inspect and grant certificates for all stock being shipped from that port.

*Increase and Decrease of Cattle in the several Districts.*

On reference to the number of cattle returned for each district as given in Appendix A, it will be seen that there is an increase in thirteen districts, which is attributed to the continued extension of the dairying industry, additional settlement, increased breeding, large numbers introduced from Queensland, and more complete returns.

In the remaining thirty-nine districts they have decreased, in some to a very slight extent and others very considerably, through losses by drought, less breeding, sales, and demand for fats.

*The "Cast" of Fat and Store Cattle.*

It is estimated that the "cast" of fat cattle for market during the coming year will be 220,610, and store cattle, 190,417. From seventeen districts the fat cattle are principally sent to Victoria; from three districts they are principally sent to South Australia and Tasmania; and the remaining districts supply the markets of Sydney, Maitland, Mudgee, Bathurst, Orange, Goulburn, Tamworth, Albury, Western Australia, and New Caledonia. The principal markets for store cattle are Muswellbrook, Maitland, Goulburn, and Wagga Wagga.

*How kept.*

The number of cattle kept wholly in paddocks is returned as 1,469,892; on open runs, 211,134; and the balance, 121,671, are depastured both ways.

*Improvement and Deterioration.*

In thirty-nine districts the cattle are said to be improving; in seventeen districts they are stationary; and in nine districts deteriorating. The principal reasons given for the improvement are—introduction of good stud stock; more attention and care in selection and breeding of stock, more particularly those for dairying purposes; also closer culling and keeping in paddocks. The reason given for deterioration is inattention to breeding, some owners breeding from all sorts without respect to breed or quality, and using the same blood for years.

*Their Diseases and Ailments.*

*Pleuro-pneumonia.*—Inspectors' reports show that this disease existed in twenty-four districts and that the cattle on 107 runs were affected; while the other districts are reported to be free from the disease. Inoculation was practised on 112 holdings as a preventive with good results.

*Cumberland Disease.*—From six districts the number of cattle reported to have died from this form of anthrax is 980.

*Symptomatic Anthrax or Blackleg* is reported to have carried off 624 head in five districts.

*Cancer and Actinomycosis.*—1,140 cattle are reported to have died in thirty-six districts from these diseases.

*Tuberculosis.*—Cattle to the number of 4,589, suffering from this disease, are reported from forty districts as having died or were killed and boiled down.

*Redwater.*—Deaths to the number of fifteen are reported from one district.

*Ophthalmia* occasionally assumes an epidemic form, and the number of cattle attacked is in some cases considerable, causing much temporary inconvenience to stock from blindness. Outbreaks have been reported from six districts, and the deaths numbered 374. For treatment, see page 22 of Report for 1898.

*Poisonous Plants.*—From six districts deaths to the number of 742 are reported through eating supposed poisonous plants, but they were, it is believed, due in most cases to hoven, arising from starving cattle gorging themselves with succulent vegetation.

*Tick-fever.*—Statement with reference to the steps taken in this Colony to prevent the introduction of Ticks, and the progress and treatment of the disease in Queensland, as well as the preparation for inoculation against tick-fever, will be found in Appendix B.

*Diseased Animals and Meat Act.*

The number of cattle condemned under this Act is given in Appendix D, kindly furnished by the Board of Health,

SHEEP.

## SHEEP.

The number of sheep in the Colony during the thirty-nine years ending 31st December, 1899, stands as follows:—

Year.	No.	Year.	No.	Year.	No.
1861 ... ..	6,119,169	1874 ... ..	22,797,416	1887 ... ..	46,965,152
1862 ... ..	6,558,896	1875 ... ..	25,353,924	1888 ... ..	46,503,469
1863 ... ..	7,169,126	1876 ... ..	25,269,755	1889 ... ..	50,106,768
1864 ... ..	9,082,463	1877 ... ..	21,521,662	1890 ... ..	55,986,431
1865 ... ..	9,650,106	1878 ... ..	25,479,484	1891 ... ..	61,831,416
1866 ... ..	11,644,593	1879 ... ..	30,062,910	1892 ... ..	58,080,114
1867 ... ..	15,066,377	1880 ... ..	35,398,121	1893 ... ..	56,980,688
1868 ... ..	16,000,090	1881 ... ..	36,591,946	1894 ... ..	56,977,270
1869 ... ..	16,848,217	1882 ... ..	36,114,814	1895 ... ..	47,617,687
1870 ... ..	16,218,825	1883 ... ..	37,915,510	1896 ... ..	48,318,790
1871 ... ..	16,766,012	1884 ... ..	31,660,321	1897 ... ..	43,952,897
1872 ... ..	17,873,696	1885 ... ..	37,820,906	1898 ... ..	41,241,004
1873 ... ..	18,990,595	1886 ... ..	39,169,304	1899 ... ..	36,213,514

For number of sheep in the several Sheep Districts, *see* Appendix A.

*Increase and Decrease.*

This shows a decrease for the whole Colony of 5,027,490, occasioned by the prolonged drought. The number of sheep imported during the year was 498,111, and the number exported 1,200,331, being an increase in the exports over the imports of 702,220 sheep.

In Appendix E there is a statement kindly furnished by the Government Statistician, which accounts for this decrease.

Australian and Foreign Sheep Introduced and Imported.

Australian Sheep Overland from other Colonies.—Stud sheep, 18,008; ordinary, 476,203; total, 494,211.

By Sea from other Colonies.—3,771 stud sheep were introduced from the other Australian Colonies by sea; particulars of those sold at the annual stud sales are given in Appendix F.

Foreign

Foreign Sheep Imported.

During the year, 129 stud rams and ewes were imported from London, America, and Germany, and passed through the prescribed quarantine of sixty days in Sydney before being allowed to be removed inland.

Particulars as to number and breed of Foreign Imported Sheep are as follows:—

Name of Importer.	Address.	Imported from—	Merino.				Long-woolled.		Total.

The “Cast” of Fat and Store Sheep.

The annual “cast” of fat sheep for the ensuing season is estimated at 3,833,270, and store sheep, 3,404,590, in all to 7,237,860.

							36,213,514

Quality of the Flocks.

In thirty-six districts an improvement in the sheep is reported, the principal reasons given being more attention to breeding, paddocking, introduction of high-class rams and ewes, and more careful classing and culling.

In twenty districts the sheep are said to be stationary, and in nine districts they are deteriorating from the effect of the drought.

Lambing.

From a return of the autumn, winter, and spring lambings obtained from the Inspector for each Sheep District, the average percentage of lambing for the whole Colony is estimated at 49 per cent, *i.e.*, calculating the number of lambs marked on the number of ewes put to the rams. The spring lambing was the highest, averaging 70 per cent., while the autumn and winter lambings averaged 43 and 48½ per cent. respectively. The estimated number of ewes put to the ram during the year was 11,631,805, and the number of lambs returned as marked during the autumn, winter, and spring lambings was 5,716,706.

The Clip.

Average per Sheep.

*Lambs.*—The number of lambs shorn in the grease was 3,269,462; the number washed, 142,950; total lambs shorn, 3,412,412.

*Sheep.*—The number of sheep shorn in the grease was 29,352,299; and scoured, 1,805,213; total sheep shorn, 31,157,512.

The average weights of the clip are estimated as follows:—

							Lambs.		Sheep.
							lb.	oz.	
Grease	...	...	...	...	...	...	2	1½	6 0
Scoured	...	...	...	...	...	...	1	0½	2 8¾

Total Clip.

Total clip in the Colony for the year 1899, according to the number of sheep, would be:—

29,352,299 sheep shorn in the grease; average clip, 6 lb. 0 oz. per sheep	=	176,113,794 lb.
1,805,213 „ scoured	2 „ 8¾ „	= 4,597,652 „
3,269,462 lambs shorn in the grease	2 „ 1½ „ per lamb	= 6,845,437 „
142,950 „ scoured	1 „ 0½ „	= 147,418 „
		187,704,301 lb.

The estimated total weight of the clip as shown above is below that of the previous year by 36,264,532 lb., owing principally to the large decrease in the number of sheep and lambs shorn. This, again, was occasioned by the exceedingly severe drought which affected the greater portion of the Colony.

Condition

Condition of Clip.

Speaking generally, it may be said that in the Eastern territorial Division of the Colony the clip was well nourished with a fair amount of yolk. In the Central Division of the Colony the clip was unsound, and in many cases full of earthy mixtures, showing the severity of the season.

The same description, unfortunately, applies to the clip in the Western Division.

Exportation of Clip.

The clip grown in the Colony of New South Wales is shipped principally to England, America, France, Germany, and Japan, and considerable portions of it is so from the ports of the three neighbouring Colonies, as well as from Sydney and Newcastle. The portions of our clip thus shipped from the other Colonies is often mistaken as the produce of those Colonies, more particularly for that of Victoria and South Australia.

The following is an estimate by the Inspectors, of the clip sent to Sydney, and also the proportion sent across the Border to Melbourne, Adelaide, and Brisbane for the years 1898 and 1899 :—

Port of Shipment.	1899.			1898.		
	Greasy.	Washed.	Total.	Greasy.	Washed.	Total.
	lb.	lb.	lb.	lb.	lb.	lb.
Sydney .....	147,095,722	3,470,967	150,566,689	177,846,389	5,976,259	183,822,648
Melbourne .....	29,816,279	718,509	30,534,788	32,038,440	817,883	32,856,323
Adelaide .....	5,868,212	555,594	6,423,806	6,562,094	727,768	7,289,862
Brisbane .....	179,018	.. .....	179,018	.....	.....	.....
	182,959,231	4,745,070	187,704,301	216,446,923	7,521,910	223,968,833

This estimate, which it is believed is somewhat less than the actual quantity exported, shows a decrease in the quantity of wool shipped during the year from the ports of Sydney and Newcastle of 33,255,959 lb., as compared with that shipped in 1898.

This decrease is attributable principally to the very heavy losses in sheep sustained by owners, in consequence of the protracted drought from which the Colony has suffered. It will also be noted that a small quantity of the clip went to Brisbane.

Classing of Clip.

In forty-two districts the clip is reported as having been fairly to well classed. In the other districts it is not considered to have been so, and the reasons given were—that owners consider it does not pay, that prices obtained are no better, want of convenience, clips not large enough to warrant expense, and the difficulty of obtaining competent wool-classers.

Wool-presses.

A great number of different kinds of presses are used ; those most in favour are Ferrier's Patent, Langley's, Lough Bros., Ritchie's, Wilding's, and Williams and Robinson's ; rack screw and pinion presses are used. There is still room for improvement in the mode of pressing, especially by the owners of small clips.

Woolpacks.

The woolpacks used are mostly Calcutta and Dundee, of various sizes, from 4 ft. 6 in. x 2 ft. 2 in. to 5 ft. 3 in., and the weight from 10 to 12 lb.

On forty-three holdings the wool is dumped before leaving.

Sheep-brands and Marks.

During the year 1899 the number of Sheep Brands and Ear-marks recorded, transferred, and cancelled were as follows :—

Recorded.		Transferred.		Cancelled.		Total Registered.
Fire Brands	... 255	Fire Brands	... 78	Fire Brands	... 76	5,976
Tar do	... 1,342	Tar do	... 191	Tar do	... 245	23,460
Ear-marks	... 1,136	Ear-marks	... 185	Ear-marks	... 188	14,559
Total	... 2,733	Total	... 454	Total	... 509	Total 43,995

Ear-marking and Tattoo-branding.

In all districts the system of ear-marking sheep is now generally carried out. Tattoo-branding is mostly used by owners of stud-sheep, not as yet to any great extent in the case of ordinary flock sheep, but where tried it has been found to be a good preventive of sheep-stealing.

DISEASES IN SHEEP.

*Scab*.—The flocks in this Colony, as well as those in the Australian Colonies and New Zealand, are now free from scab.

*Anthrax*.—This disease appears to be spreading, and owners are now availing themselves of the facilities offered for vaccinating their sheep, which has been the means of lessening the mortality. A statement (Appendix G) is attached showing the vaccinations made during the year.

*Foot-rot*.

*Foot-rot.*—Five districts report foot-rot among the sheep, but only to a slight extent, the past season not being favourable to its spread. Remedies for foot-rot will be found as Appendix H.

*Fluke.*—Owing to the dry season this disease also has been less prevalent than in previous years. The losses from fluke reported from fourteen districts amount to 8,111. To prevent its spread, owners are urged to free their land from surface water by running plough furrows where practicable and helping them with the spadé. The preventives used by owners were salt, tar, and turps, sulphate of iron and Liverpool salt, and salt and sulphur, besides specifics.

*Parasitic Worms.*—Eleven districts report the sheep as having been infested with worms to the extent of about 11½ per cent.; in five districts the sheep were infested with stomach, lung, and tape worms; one district with stomach and tape worms; in four districts with stomach-worms only, and one district lung-worms only.

The following results have been gathered regarding the efficacy of the various drenches and licks used for sheep for worms:—

#### *Drenches.*

*Arsenic.*—For the stomach and tape worms the arsenic and soda drench is still reported as the most effective, and has been by far the most generally used. Owing to the late dry seasons the sheep on the whole have been free from worms. It has, however, been recommended that potash, as being less severe on the lining of the stomach, should be substituted for soda in its preparation. The arsenic and soda drench is reported by several of the Inspectors as having been also efficacious for lung-worms. No authenticated information has been received of this drench affecting the health of the sheep or injuring the wool.

*Turpentine.*—Turpentine, with various mediums, has been very generally given for stomach, tape, and lung worms, with good results, when repeated.

*Hayward's Specific* is reported as having given satisfactory results where used.

*Weaver's Drench* is reported to have been used in a few districts with fairly satisfactory results.

While it can be said that a decided improvement follows the administration of most of the drenches generally used, it is a fact that even in the case of the most effective the *post-mortem* examinations disclose that generally where the sheep are at all badly infested some worms are still alive; and this again, it is believed, arises from the owners delaying too long in drenching, and allowing the worms to have too great a hold on the sheep before they are drenched. The consequence is that some worms are left, which keep the sheep from thriving, and, with the introduction of fresh eggs from the water and pasture—if the weather is at all favourable for the development of the worms—in the course of a few months the sheep are as bad as they were before they were drenched. To make the cure effective, therefore, sheep which have been badly infested should, on receiving one drench, be kept as near the drenching yards as possible, and receive a second drench in the course of twelve or fourteen days after the first.

But, while licks and drenches should be provided and given at as early a date and as often as required, owners should give their earnest attention to the removal of what may be termed the contributing causes of the pest by avoiding overstocking, attending to the proper nourishment of the lambs and weaners, burning off old pasture, and getting rid by draining off surface and stagnant water, as suggested in Vol. II, Part 2, of the *Agricultural Gazette*.

#### *Licks.*

It is reported that the following licks have been used with good results:—

Salt and sulphur.	Salt, sulphate of iron, and Hayward's Specific.
Salt and sulphate of iron.	Salt, tar, and turpentine.
Salt and turpentine.	Pottie's Preventive Lick.
Salt, sulphate of iron, and turpentine.	Salt and lime.
Salt, sulphur, and sulphate of iron.	Salt, sulphur, and lime.

It is scarcely necessary to point out that a lick, if it is efficacious in warding off an attack of worms, is far preferable to a drench; and as owners in all but the true saltbush country are now aware that it pays them well to give their sheep a liberal supply of salt, it would add very little to the trouble or expense to give once a month with the salt some of the other ingredients here mentioned which they found from experience was to any extent effective in protecting their sheep from the worm-pest.

#### *Sheath Disease in Wethers.*

Full particulars as to the nature of the disease, its treatment, and prevention, as furnished by Mr. Veterinary-Surgeon W. Scott, will be found in my Annual Report for 1895, as Appendix H.

#### PIGS.

On 31st December, 1899, the number of pigs in the Colony stood at 239,973, being a decrease of 7,088 on the returns for the previous year.

One thousand and thirty-nine pigs were introduced by sea and land from the other Australian Colonies and England.

Eight thousand two hundred and thirty-one pigs were exported during the year.

Twenty-seven pigs were killed on board, as the owners would not quarantine them.

There was a decrease in the number of outbreaks of swine fever in Great Britain and Ireland during the year 1899 as compared with previous years. See Appendix N.

The introduction of pigs from New Zealand and Queensland has been prohibited owing to reported outbreaks of swine fever.

#### DOGS.

## DOGS.

Thirty-five dogs which arrived from England and other places outside the Australian Colonies passed through quarantine during the year.

Twenty-one "ships' dogs" were quarantined during the stay of vessels in port, and five "ships' dogs" were destroyed.

All "ships' dogs" and other stock on board foreign vessels for the use of the passengers and crew are now quarantined during the stay of the vessel to which they belong in port, whether in Sydney or at Newcastle.

One hundred and twenty-nine Colonial dogs were introduced at the Port of Sydney from the other Colonies, and 515 dogs were inspected prior to exportation.

*Diseases in Dogs.*

From the statement given as Appendix O hereto, it will be seen that there has been a decrease in rabies during the past year in the United Kingdom.

TRAVELLING STOCK (*Reserves, Roads, Tanks, Wells, &c.*).*Trespass on Reserves.*

In thirty-six districts the travelling stock and camping reserves are reported as having been trespassed upon, generally only to a slight extent, and in twenty-nine districts they are reported as being free from trespass.

From forty-two districts it is reported that 8,450,850 sheep have travelled through during the year in search of grass and water. From nine districts the number of loafing sheep is given at 65,800.

Owing to the continued drought the number of sheep on the road were more than treble that during the previous year, and the reserves, especially where leased, were found quite inadequate for this extra traffic.

The Stock Boards Council of Advice have taken up this matter with a view to the reserves and the stock traffic being placed on a more satisfactory footing, and have, at the request of the Minister, submitted for his consideration the principles on which they consider a measure for dealing with travelling stock reserves and travelling stock should be framed, and submitted a draft Bill which is now before the Parliamentary Draftsman for revision.

*Marking of Travelling Stock and Camping Reserves.*

Fair progress has been made with regard to the marking of travelling stock and camping reserves, there being at present about 1,500 miles surveyed and about 80 miles in course of survey. The routes marked are :—

1. From Boggabilla, *via* Yetman, Warialda, and Cobbadah, to Breeza.
2. From Moree, *via* Millie, Narrabri, Boggabri, Breeza, and the Liverpool Range, to the Bulga Mountains.
3. From Walgett, *via* Coonamble and Mendooran, to Uarbry.
4. From Coolah, *via* Uarbry, to Rylstone.
5. That portion passing through Terry-hie-hie Holding.
6. From Boggabri, *via* Turrabeile or Cox's Creek, to Coolah.
7. Mungundi to Moree.
8. Along the Mara Creek from the Barwon River upwards.
9. Along the Bogan to travelling stock reserve on the Murda Creek.
10. From Breelong to Dubbo.
11. From Jennings to Tamworth.

With a view of making these surveys of practical benefit to drovers, stockowners, and others, lithographs are being prepared showing sections of the roads in lengths of between 20 and 30 miles.

Lithographs of the roads, Boggabilla to Cobbadah, in six (6) sections; Moree to Cobbadah, *via* Gurley Holding, in one (1) section; Walgett to Uarbry, in five (5) sections; and Liverpool Range to Putty, in five (5) sections, are now on sale at the Head Office, and also at the local Stock Offices, at 1s. per section.

*New Stock Roads required.*

In thirteen districts new roads are required for travelling stock, and to obtain these action has been already taken in six districts.

*New Stock Reserves required.*

In twelve districts new reserves and alterations of existing ones for travelling stock are required. In fifty-three districts there are sufficient reserves; but in a great many cases the reserves are under annual lease, and are kept very bare of feed.

*New Wells, Tanks, or Dams.*

In twenty-six districts the inspectors report that new wells, tanks, or dams should be constructed by the Government at places which they indicate.

## REGISTRATION

## REGISTRATION OF HORSE AND CATTLE BRANDS.

*Brands registered.*

The number of horse and cattle brands registered up to 31st December, 1899, was 81,392. The number of brands registered during the year 1899 was—Horse brands (alone), 163; cattle brands (alone), 473; and horse and cattle brands, 965; making a total of 1,601.

This shows an increase of 14 in the total number of brands registered during the year as compared with 1898. There is a decrease in the number of brands transferred and cancelled.

*Brands transferred.*

The brands registered during the year 1899 as transferred were—Horse brands, 6; cattle brands, 25; horse and cattle brands, 100; total, 131—being a decrease of 16 on previous year.

*Brands cancelled.*

The brands cancelled (horse and cattle) in 1899 were 176.

*Addresses changed.*

The number of addresses of owners changed in 1899 was 70.

*Compliance with the Act.*

In all the districts the provisions relating to registration and the other requirements of the Act are reported as being fairly carried out.

*Benefits of the Act.*

The inspectors, in alluding to the benefits of the Act, report that it prevents duffing, stock-stealing, facilitates identification, assists in recovering lost stock, and otherwise is a great convenience and protection to stockowners.

Another new system of branding has been brought under notice, and is reported on in Appendix I.

## POUNDS.

*Number and Inspection.*

At the end of the year there were 324 pounds in operation in the Colony. The whole of the pounds are inspected periodically by the stock inspectors.

*State of Yards.*

Thirty-six of the pound-yards are reported to be old; some require renewing, being unfit for the safe custody of stock; while others need repairs. The remainder are said to be in a fair and good condition.

*Keeping and Depasturing Pound Stock.*

The provision for the proper sustenance of impounded stock, which has to be made by the poundkeeper at his own expense, according to the reports received, is satisfactory. As a rule, poundkeepers in the country districts have now paddocks for the stock.

*Management of Pounds.*

The poundkeepers are reported to be performing their duties, upon the whole, in a satisfactory manner, the result to a large extent of the appointment of inspectors of stock as inspectors of pounds.

## NOXIOUS ANIMALS.

*The Districts in which the Pastures and Stock Protection Act is in force.*

The Act has been brought into operation in all the districts, and during the year work has been done to the extent shown in Appendices J and K.

*Receipts and Expenditure under the Act.*

The amount of assessment paid by stockowners in 1899 was £27,700 10s. 10d.; and the amount expended £33,078 14s. 11d. Four districts are reported to be in debt to the amount of £321 9s. 4d.

In four districts full rates were levied, in fifty-two districts less than full rates, while in nine districts no rates whatever were levied.

During the year the bonuses paid by the Boards for scalps ranged as follows:—For kangaroos, from 1d. to 6d.; kangaroo rats,  $\frac{1}{2}$ d. to 3d.; wombats, 6d.; wallaby, from  $\frac{1}{2}$ d. to 3d.; paddamelon, from  $\frac{1}{2}$ d. to 3d.; bandicoot, 2d.; hares, from 1d. to 6d.; native dogs, from 5s. to 30s.; pups, 2s. 6d. to 10s.; wild pigs, 3d. to 6d.; eagle-hawks, 4d. to 7s. 6d.; crows, 1d. to 6d.; and foxes, 2s. 6d. and 20s.

*Increase and Decrease.*

Kangaroos are reported to be increasing in three districts, wallabies in nine districts, native dogs in eight districts, hares in nine districts, and wild pigs in four districts. In twenty-nine districts kangaroos are reported to be decreasing, wallabies in twenty districts, native dogs in nineteen districts, hares in nineteen districts, and wild pigs in seven districts.

*Number*

*Number destroyed.*

The number of kangaroos destroyed during the past year was 1,937; of kangaroo rats, 120,918; of wallabies, 935,187; of wombats, 236; of bandicoots, 36; of paddamelons, 28,953; of wild pigs, 17,134; of hares, 486,518; of foxes, 1,527; of native dogs, 12,708; of eagle-hawks, 7,865; of crows, 142,147.

*Steps taken for their destruction.*

In the majority of the districts, hunting with dogs, drives, shooting, trapping, and poison have been adopted with satisfactory results. In forty-seven districts poison has been used, mostly for dogs, with fair to best results, and from eight districts it is reported that the results have not been satisfactory, the dogs being too cunning to take baits.

## LOSSES FROM NATIVE AND TAME DOGS.

The losses through native dogs for the year are estimated at 173,807 sheep, valued at £58,855; and from tame dogs, 75,772 sheep, valued at £29,808; making a total loss of £88,663. A stricter enforcement of the law with respect to stray dogs, and the registration of dogs, is urgently required.

## COMMONS.

There are now 359 commons in the Colony, the average acreage of which is about 4,000 each.

*Number of Commoners, Stock, &c.*

The average number of commoners to each common is estimated at seventy-six, and the average number of stock kept on each common at 100.

Many of the commons are unfenced, consequently are trespassed upon by travelling and other stock.

## FRESH LEGISLATION.

*The various Amendments suggested by the Boards.*

The agitation for the passing of the Consolidated Stock and Pastures Bill still continues, and among other amendments of the law asked for it is suggested that owners of 100 acres should be assessed; amendment of section 13, Pastures Consolidated Act; that the assessment be paid at the time of making the returns; that there should be uniform rates of bonus and assessment in divisions and throughout the Colony; that noxious animals should be destroyed on vacant Crown lands; that the Government should contribute a higher rate of subsidy to the funds of the Boards; that rabbits be declared noxious animals; that the Boards should have the administration of the Rabbit Act; that a measure should be passed dealing with noxious weeds and plants; that owners should be compelled to lay poison for noxious animals; that the election of directors should be triennial; that there should be a compulsory bonus for all noxious animals; and that the fees under the Dog Act should be paid to the Pastures Boards.

*Travelling Stock Bill.*

A comprehensive measure has been framed and is ready for introduction dealing with notification and cancellation of travelling stock and camping reserves, the rights and privileges of travelling stock, travelling charges, the rules under which stock travel, and other subjects relating to travelling stock and camping reserves.

*The Registration of Brands and Stock-stealing Prevention Bill.*

Copies of the draft of this Bill which was prepared in accordance with the resolution of the Intercolonial Stock Conference, held in Melbourne in 1898, for their consideration and report, have been submitted to the Stock Boards and Council of Advice, together with additional provisions dealing with mustering stock, and stock, hide, and skin stealing prevention. The Bill will be ready for introduction when the opportunity occurs this Session of submitting it to Parliament.

*Stock Diseases Prevention Bill.*

This Bill deals with tick and other diseases in stock which the Governor-in-Council may declare to be diseases under the Act when passed, and it is expected to be introduced early in the present Session.

## MISCELLANEOUS.

*Green Crops and Cultivated Grasses.*

In thirty-three districts cultivated grasses have been sown for pasture during the year, the most successful being lucerne, prairie, rye grass, and clover.

*Number and Division of Runs.*

The number of open or unenclosed runs in the Colony is 5,850; the number enclosed is 41,812; the number partially subdivided is 18,122; and the number properly subdivided is 22,045.

*Improvements,*

*Improvements, Fencing, Dams, Tanks, and Wells.*

The number of miles of fencing throughout the Colony is estimated as follows:—751,269 miles without wire netting, at an average cost of (say) £35 13s. 10d. per mile, amounting to £26,815,662, and 50,935 miles with wire netting, average cost at (say) £66 4s. 7d. per mile, amounting to (say) £3,373,446.

The number of dams used for stock purposes is estimated at 53,651, at an average cost of (say) £49 10s.; number of tanks, 58,418, at an average cost of £156 each; and the number of wells and bores used is estimated at 9,524, at an average cost of £99 13s. 9d. each.

Cost of fencing, £30,189,108; cost of dams, £2,657,184; cost of tanks, £9,114,903; cost of wells and bores, £949,417; making a total of £42,910,612, as representing the amount expended by way of improvements, &c.

*Plants and Weeds.*

## Prevalence.

In six districts *trefoil burr* grows to a very large extent; in six districts, to a considerable extent; in twenty-seven districts, to a slight extent; and in twenty-six districts there is none reported.

In thirty-nine districts *variegated thistle* is reported to a slight extent; in two, to a considerable extent; in three, to a very large extent; and twenty-one districts are reported as free from it.

In forty-two districts *black thistle* is reported to a slight extent; in three, to a considerable extent; in three districts, to a very large extent; and seventeen districts are reported to be free from it.

In two districts the land is reported as being infested to a very large extent with *Bathurst burr*; in three districts, to a considerable extent; in forty-two districts, to a slight extent; and in eighteen districts the land is not infested.

In thirty-two districts other noxious weeds grow to a slight extent; in six districts, to a considerable extent; in ten districts, to a very large extent; and in fifteen districts there is none reported.

## Legislation for Noxious Weeds.

Legislation is urgently required for dealing with noxious weeds and plants, more especially the *Bathurst burr*, the prevalence of which is inflicting very serious loss on travelling stock. A Bill has been prepared by the Minister for Lands to deal with the matter.

Steps have in the meantime been taken by this Department to eradicate the *Noogoora burr*, which made its appearance on travelling stock reserves in the vicinity of the McIntyre River, as also in the Casino and Tweed-Lismore districts.

## Cost of clearing Commons, Reserves, &amp;c., of Weeds.

The cost of clearing the commons of noxious weeds throughout the Colony is estimated by inspectors at £26,805; the police paddocks, £873; the travelling stock reserves and droving roads at £150,359; amounting in all to (say) £178,037.

## PREVENTION OF SCAB IN SHEEP ACCOUNT.

A detailed statement of receipts and expenditure by the Department in connection with the above Fund for year 1899 will be found in Appendix L hereto, and will be published annually in the same form.

For statement of the salaries paid to the different inspectors from the above account, see Appendix M. See also Appendix N, which gives salaries of secretaries under Pastures Boards.

## DISEASES IN STOCK IN THE UNITED KINGDOM.

It will be seen by tabulated statement under Appendix O that there was a very considerable decrease during the year in infectious and contagious diseases in Great Britain and Ireland. An outbreak of foot and mouth disease occurred in the counties of Norfolk and Suffolk some two months ago, but it would seem from recent accounts that the disease has been stamped out.

## FROZEN MEAT TRADE.

There is a large falling off in the number of the sheep exported in 1899 compared with 1898, through the severe continued general drought from which the Colony has suffered. The number shipped in 1898 was 1,089,219, as against 752,820 in 1899, thus showing a decrease of 336,399.

There was also a falling off in the quality of the mutton from the same cause, and considerable complaint on account of its condition.

The price in London for good mutton has during the year ranged comparatively high; but owing to the shortness of feed, and consequent high prices in the Colony, the margin has not been sufficient to induce shippers to purchase as largely as they would otherwise have done.

Now that there are regular direct shipments from the colonies to Liverpool and Manchester, there is a good prospect of a large and growing trade in frozen mutton and other Australian produce being established with the Midland and Northern counties of England through these ports, as Liverpool is well supplied with cold storage, and very complete and extensive refrigerating accommodation and storage has recently been erected on the canal, near Manchester, by the Colonial Consignment and Distributing Company, while additional cold storage has also been provided at the Manchester Meat Market.

With a return of favourable seasons, and these and other additional outlets for our frozen mutton, it is believed that our export trade will not only reach its former volume, but will largely exceed it.

## THE STOCK BOARDS COUNCIL OF ADVICE.

The Council had during the year under consideration many very important matters, and, although not much progress has as yet been made in obtaining the amendment of the Acts which they have been urging on the Government, the opinions of the Boards on these questions have been ascertained, and a great deal of valuable materials have been collected which will be turned to account in preparing the measures which are being framed to carry out these amendments, and will be ready to be submitted to Parliament when the opportunity occurs.

As will be gathered from the brief synopsis of the work done by the Council, the Honorable the Minister is freely availing himself of their experience and advice in framing the measures dealing with the Live Stock Industry which he is about to submit to Parliament, and as they speak for the Boards in their respective Divisions, who again represent the stockowners of the Colony, there ought to be little difficulty in getting these measures through the House when an opportunity occurs of introducing them.

1. The strict enforcement of the Dog Act in districts in which sheep are kept.
2. Removal of emus from the list of protected birds in the districts in which they are numerous.
3. Stock bought at Homebush or Maitland and not going into consumption returned to the country at reduced rates.
4. Revision and additions to the Brands Bill for the prevention of stock stealing, including registration of hide and skin dealers.
5. Revision of the Travelling Stock Bill.
6. Correspondence of the Pasture Boards going through the post free.
7. That rabbits be declared noxious animals again, under the Pastures and Stock Protection Act.
8. The purchase of the secret of the preparation of the vaccine of anthrax.
9. Revising the Regulations under the Pastures and Stock Protection Act.
10. Protest against the placing of the Abattoirs under municipal control.
11. Legalising the Council.
12. Asking the passing of an Act dealing with the destruction of noxious weeds.
13. Asking legislation against tick.

APPENDIX A.  
RETURN of Stock in the several Sheep Districts.

Districts.	Year 1898.					Year 1899.
