Inquiry into the transport technology sector

Terms of reference

The Committee will inquire into how local research and development in the transport technology sector can deliver transport service innovations, including:

1. Mobility as a Service (MaaS)

2. real time public transport journey management

3. first and last mile transport services

4. how data might be used to improve access and safety for travellers, including for women, and

5. the ethical considerations and regulations in the development of connected and automated vehicles (CAVs).
