

The number of TOIP participants who return to undertake the program for a second or subsequent time is very small. Our records show that around 6 people from 39,000+ enrolments have returned. Please be aware that PCYC cannot provide more accurate data as personally identifiable data has only been held from 2013 to date. Prior to this only non-identifying data was held. Participants may also have attended the program prior to 2013 or may also do the TOIP program with another provider when attending for a second or subsequent time. A participant may also have been expelled by a Provider and enrolled at another location.

Anecdotally it looks like the majority of people who attend TOIP do so only once, giving an indication that the program as delivered since 2013, is effective.
