## **Petition to Inquiry into Food Production and Supply in NSW**

The below members of the public have signed the following petition. As at the time of submission, there were 436 signatories. Vegan Australia submits this petition in addition to Vegan Australia's own submission.

### **The petition**

The petition wording is as follows.

Dear members of the Committee on Environment and Planning,

Given that animal agriculture contributes to food insecurity, climate change, resource waste and the degradation of land, fresh water and ocean environments, I ask the committee to recommend that the government:

1. acknowledge the many ways that animal agriculture causes damage to the planet and how this impacts food security
2. shift government food purchases to 100% plant-based
3. assist the development of new plant-based industries, particularly value-added export industries
4. support a just transition of the agricultural system away from animal production to other uses of the land
5. encourage a move towards healthy plant-based diets
6. ensure that vested interests do not influence public policy

Thank you for considering this petition.

### **Comments by signatories**

Below is a table of signatories who included comments when signing the petition.
