

I think climate change is an extremely important issue in our area because our town is starting to go ahead very well and I would like the place where I grew up to be around for everyone else to see. We just hosted the state river health conference and it raised a lot of concern in our school and community. If we continue to live the way we are we will not be around much longer. If we could get some help from the government i'm sure our community would be more than happy to do something about global warming in our area.
