

## DOWNSTREAM GAS SUPPLY AND AVAILABILITY IN NSW

Name: Name suppressed  
Date Received: 11/06/2013

*Partially Confidential*

We are residents of Callala Beach, NSW, and our current gas supply is in the form of 45kg cylinders of LPG, which we use for cooking - stove and barbeque - hot water and heating during the winter months.

Having used reticulated Natural Gas in suburban Sydney for many years, we find LPG to be a less convenient and far more expensive option.

We would therefore welcome a reticulated gas supply to our village, as would the many other residents of both this and nearby adjoining villages.

We are aware that many residents would prefer to utilise gas but are not prepared to undertake the inconvenience plus added expense of a bottled supply.
