

Goodafternoon

Have just been advised of your survey. Broadband has been installed to a large part of our community, but mobile coverage is very poor. There has been some incremental improvement over a long time but this would not be accepted in any town or city. As Captain of the local RFS brigade I am concerned that our communication regarding phone coverage is still so poor. With regards to broadband I am told that the only provider so far is Telstra, this does not allow for a very competitive market.
