THE PROMOTION OF FALSE OR MISLEADING HEALTH-RELATED INFORMATION OR PRACTICES

Organisation: Real Health Care Reform Pty Ltd
Name: Mr Ken Hurry
Position: Managing Director
Date Received: 15/01/2014

The Chairman,
Health Care Complaints Commission Enquiry.

“INQUIRY INTO THE PROMOTION OF FALSE OR MISLEADING HEALTH-RELATED INFORMATION OR PRACTICES.”

Dear Sir,

I refer to the Terms of Reference for the above and submit our submission.

Over the last five years, our company has led the largest and most in-depth investigation into the Australian Health Care System that has ever been done, so we speak with experience and knowledge of how the health system actually is, not how it looks. Things are not always as they seem.

In this submission, I intend on addressing the Terms of reference step by step, so it is clear we are engaging the heart of the inquiry's terms.

In the preamble, you mention – *“measures to address the promotion of unscientific health-related information or practices which may be detrimental to individual or public health. The Inquiry will focus on individuals who are not recognised health practitioners, and organisations that are not recognised health service providers.”*

- There are a number of ambiguities and assumptions here. *“not recognised health practitioners”* is a subjective term – recognised by whom? Individuals and organisations that are healing people are recognised health practitioners by the people they are treating, and that is all that is required. We have found that most people go to them because the orthodox medical system has nothing to offer to heal them.

- *“the promotion of unscientific health-related information or practices which may be detrimental to individual or public health”* - We found the orthodox medical system is the most unscientific of all,
 - where (we found) drug companies falsifying reports to the TGA to have drugs passed,
 - nearly all drug companies have lengthy criminal records,
 - doctors fail to disclose the serious side effects of drugs, including the many diseases they cause, (including cancer, strokes, pulmonary thrombosis, depression, suicides, homicides, heart attacks, diabetes, Alzheimer's, etc. etc.)
 - Doctors routinely prescribe drugs that have never been approved for the purpose they are prescribing for, which makes the TGA approval a farce.

Page 1 of 3

- Doctors routinely prescribe multiple drugs (polypharmacy) where the synergistic (mixed) effects of these drugs has never been tested. This is illegal according to the Therapeutic Goods Act.

“(a) The publication and/or dissemination of false or misleading health-related information that may cause general community mistrust of, or anxiety toward, accepted medical practice;”

- This certainly needs to be addressed – Doctors deliberately and continually denigrate cures that have been developed outside their orthodox training that have success rates far exceeding anything the orthodox system can provide, and with no side effects. Doctors do this to protect their own system and to create *community mistrust of, or anxiety toward, accepted medical practice*. I hope you take action to correct this.
 - For example, we found that there is a cure for breast and skin cancer that can be applied at home for about \$10/cure, that kills the cancer in 24 hours, extracts the cancer in 7-10 days and heals up in 30-45 days, with perhaps a small mark. No loss of breast tissue, no operations etc. Yet the orthodox medical system has gone all out to discredit it and create unwarranted mistrust. Why would they do this? – we wondered also, until we followed the money trail.

(b) The publication and/or dissemination of information that encourages individuals or the public to unsafely refuse preventative health measures, medical treatments, or cures;

- I assume you are covertly referring to vaccinations here. People need to be able to examine the proper evidence, rather than choose on the spin of the medical system, then make their own informed choice.
- For example – The polio vaccine. We have uncovered evidence of an interview with Dr. Hilleman who was the developer of Merck's vaccine program, who admitted on video that the polio vaccine contained a live cancer virus. Years later, this has resulted in the explosion of cancer.

See — “60 Lab Studies Now Confirm Cancer Link to a Vaccine You Probably Had as a Child” <http://articles.mercola.com/sites/articles/archive/2011/02/18/leading-vaccine-doctor-states-cancer-linked-to-polio-vaccine.aspx>

“In 2011 there were an extra 47500 new cases of NPAFP [non-polio acute flaccid paralysis]. Clinically indistinguishable from polio paralysis but twice as deadly, the incidence of NPAFP was directly proportional to doses of oral polio received. Through this data was collected within the polio surveillance system, it was not investigated.”

Now 180 million Indian children have now been injected/infected with polio vaccine.

- Is this the “accepted medical practice that you are trying to protect??

“(c) the promotion of health-related activities and/or provision of treatment that departs from accepted medical practice which may be harmful to individual or public health;”

- Our investigations found (Government report) that medical doctors kill 14,000 people per year and seriously harm or injure 340,000 people per year due to preventable medical errors. Doctors cause the admission into hospitals of 90,000 people per year from the toxic effects of prescription drugs.
- Is this the “accepted medical practice that you are trying to protect??

“(d) the adequacy of the powers of the Health Care Complaints Commission to investigate such organisations or individuals;”

- Yes, it would be a step forward to have the powers to investigate these areas I have mentioned above, but at the moment, the HCCC is not yet understanding the harm and deaths caused daily by the medical profession. We can help with that if you desire, as we have investigated over 100 areas of the health system and are utterly dismayed at what we have found. From babies to the aged they are being harmed, and killed by the medical profession, the very people who are supposed to be helping us.

“(e) the capacity, appropriateness, and effectiveness of the Health Care Complaints Commission to take enforcement action against such organisations or individuals; and”

- See the above.

“(f) any other related matter”.

Doctors wrongly state that “there is no cure” for the vast majority of so-called diseases. Yet we found there are cures for everything, and we found the causes of nearly all so-called diseases, so they are relatively easy to prevent in any case. Thousands of people die every year needlessly, mothers, father, children and the aged. The HCCC needs the power to stop any attempt by the medical system to stop cures (we can provide details) where children die just so someone can make more money.

We found that doctors are not even trained to cure, only to continually treat with toxic prescription drugs, where the patients gets worse and worse, never being cured. The medical training is based on pharmaceutical companies prescription dugs for the benefit (and huge profits) of big Pharma, not for the patient’s benefit.

Thank you for the opportunity to provide this submission.

Best regards,
Ken Hurry
Managing Director
