Subject: Motorcycle safety: problem with non-cancelling indicators

If I may submit this issue of concern:

- motorcycles are fitted with non-cancelling indicators -after a turn ,a rider may ride quite a while not realising the turning lights are still flashing.
- other road users may cut across a motorcyclist having assumed that the bike is still intending to turn.
- may I suggest a method of signalling to the rider that his/her indicators are on.
- in my experience , raising an arm and opening and closing the hand (5 fingers/fist/5fingers) works much of the time.

Thanks.

Carlos Stotz
