SUSTAINABILITY OF ENERGY SUPPLY AND RESOURCES IN NSW

Name: Mr Shane Verran

Date Received: 16 August 2019

Shane Verran [REDACTED]

Dear Committee,

Please accept this submission on the Inquiry into the Sustainability of Energy Supply and Resources in NSW.

We as Australians are missing out on an incredible opportunity by not embracing the production and scientific research into the sustainable energy industry. We have an unprecedented opportunity available to few other countries in the world.

We are beholden to traditional forms of energy but more frightening than this is it appears that we, particularly political parties, are beholden to the producers and owners of these traditional resources. It is undeniable that the use of these resources is destroying the world and it is also undeniable that we have clean alternatives to take their place. This begs the question of why we are using these resources instead of developing industries to take advantage of this revolution. Australia used to be a world leader in so many things and this seems to be a "no brainer" that we should not only take advantage of this but once again lead the world in innovation and clever thinking. Make Australia proud clean and healthy.

I am writing to acknowledge that major energy changes are underway globally, and these are beginning to be felt in Australia as well.

Regional communities are looking for long-term support to pursue emerging economic opportunities, like renewable energy.

I'd like to see detailed regional planning, driven by communities, and strong public investment to seize new opportunities and prepare our economies for the long-term.

I don't want to see NSW open up coal seam gasfields or pursue new coal mines in our best farming country. Mining is polluting our air and draining our water at an alarming rate.

In regional areas we are already dealing with the impacts of climate change in the form of more extreme heatwaves, droughts and bushfires.

NSW needs to choose a new path that is focussed on preparing us for the future and which ensures that regional areas are at the forefront of emerging economic opportunities in renewables, agriculture and manufacturing.

I note that globally many of the customers the NSW supplies coal to are already shifting to renewable energy, and that creates substantial uncertainty for the coal mining industry here. Four power stations here are also scheduled to close down over the two decades.

Regional communities should not be subject to economic shocks and negative impacts from changing markets and a failure by our governments to lead and to plan.

We need to plan now to prepare for these changes, and to ensure that there is support for workers and a strong plan for new industries and new opportunities.

Please back substantial public investment into our regions and community-driven diversification plans, especially in the Hunter Valley, and fast-track plans for renewable energy and storage to prepare us for the long-term.
