SUSTAINABILITY OF ENERGY SUPPLY AND RESOURCES IN NSW

Name: Ivan Heron

Date Received: 28 August 2019

Good afternoon, I am making a submission to this enquiry as coal mining is an important energy source for the Australian community. Whatever happens in NSW has impacts nationally . The IPCC is messaging that soil management and forestry management are important for climate change . The IPCC also references protein from ruminants being important as well. Please could the Parliament of NSW consider those issues in their energy policy objectives of reducing climate change risks. Thanks
Ivan
