FOOD PRODUCTION AND SUPPLY IN NSW

Name: Dr Elizabeth Nelson
Date Received: 28 February 2022

Animal agriculture needs to be phased out, for many reasons including:

-the world is increasingly moving towards plant-based foods. Australia needs to be at the forefront of this development for both food security reasons and economically. In the future the world will depend increasingly on plant foods as they are more efficient to produce in terms of land use, create far less emissions than animal agriculture, and cause less destruction of natural habitat. Of course, a shift away from animal agriculture will also reduce the terrible suffering endured by animals in intensive farming.

Thank you for considering this important issue.
