EMISSION FREE MODES OF PUBLIC TRANSPORT

Name: Ms Daisy Norfolk

Date Received: 1 July 2022

Public transport is a really important part of our society. The government also has an important role in regulating and managing public transport, for the benefit of the public. This includes encouraging sustainability, such as the uptake of emissions-free forms of transport. The emissions from transport can be significant, but this also provides an opportunity for this sector to be part of the transition to a low-emissions future.
