**Subject:** FW: Supplementary water

John,

and you wanted to know how Supplementary Flow Events work.

1. On most occasions when a Supplementary Event is announced, it is available for both GS Surplus Flows (the old off-allocation) and Supplementary Water Allocation (SWA). On rare occasions, only once I can ever remember, it is restricted to SWA.
2. I determine the type of water you use. Where possible I will first debit your GS Surplus account, then your SWA account, and then your on-allocation account.
3. GS Surplus Water is available when your Effective Available Water (EAW)  $\leq 70\%$ , that is, your GS Allocation plus any carryover  $> 15\%$ . For your SWAA the EAW is  $17\% + 0\%$  (your carryover is  $< 15\%$ ) =  $17\%$ .
4. The limit you can take is  $85\%$  less the EAW. For your SWAA this is  $85 - 17 = 68\%$ .
5. In total you have available –  $17\%$  (on-allocation) +  $68\%$  (GS surplus) +  $10.5\%$  (carryover) =  $95.5\%$ . SWA is in addition to this.
6. As GS increases, the limit in 3 above decreases. Should you exceed the limit at any time during the year because it has decreased, I will first move the excess to any SWA balance and then to on-allocation.
7. SWA can be accessed at any time when there is a Supplementary Event announced by MI. The EAW limit does not apply.

Hope this helps.
