

Supplementary questions

Water inquiry

1. If water was not a concern could you estimate what your potential economic output would be?

We have approximately 200ha under Centre Pivot Irrigation.

If water was not a concern, the potential economic output would be approximately 6,000 tonnes of Lucerne annually with a value of about \$1.8 million.

With more water available we would develop another 100 ha under pivots which could produce an additional 3,000 tonnes of lucerne annually with a value of about \$900,000.
