With the awareness of the Walk to School Safely Program, the students at Bexley Public School were alarmed at the high flow of traffic on Forest Road.

Trucks, trucks, trucks everywhere!

We the students, must implore the council and Roads Maritime Service to help protect the safety and health of the students at our school.

The Walk to School program will not succeed without the support. So, let's take action NOW!

We MUST stop trucks from coming down Forest Rd! They create a dangerous environment and massive distractions for the students trying to learn at Bexley Public School.

The safety of children and adults is of absolute importance. As the trucks are driving by, the drivers have great difficulty noticing the younger students and adults crossing the road. That's when a possible huge accident could occur. Students feel very unsafe when walking to school because of these trucks that really should be using the M5. Air pollution is also extremely hazardous to children's health who have asthma, and even for those individuals who do not have asthma.

We calculated 55 trucks passed our school in just 10 minutes, that's crazy! As the trucks pass, they cause a lot of traffic, they're very heavy and take longer to slow down and turn. This ultimately creates a dangerous environment not only for the students at Bexley Public School, but also the entire local community.

At Bexley Public School learning is very important, but trucks make too much noise including screeching brakes, loud horns, and their constant beeping. This affects our ability to learn. When the trucks are making these loud noises, it will possibly scare the younger kids as they don't know what's happening.

Overall trucks are disturbing everyone and are a danger to our safety. WE WANT TRUCKS OFF FOREST ROAD!!!

Stage 3 Students at Bexley Public School
