

Additional Information**1. Report submitted by Mr Boyle**

We would like to bring to the attention of the Committee that the Report suggested by Mr Boyle [A systematic review and meta-analysis of the ecological effects of Australian deer](#) should have been declared that it was “exciting new research funded by the Blond Bay Hog Deer Advisory Group, the Australian Deer Association, and the Sporting Shooters Association of Australia (Victoria).”

2. Mr Borsack’s lack of evidence

On Page 42 of the Transcript, Mr Borsack makes a statement that “Conservation hunting on State Forests in NSW has been run since February 2006. There has never been an incident”

I believe this was also stated by SSAA later.

We believe that it is reasonable that evidence be provided to the Committee before this is considered as factual.
