INQUIRY INTO COAL SEAM GAS

Name: Mr Paul Aylward

Date received: 19/09/2011

I'm very, very concerned about the danger of the toxic chemicals used in fracking polluting the ground water and the water table. If it happens, how will it be rectified?

It's such a new technique, implemented with such seeming haste, the potential for disaster must be high. Please halt any coal seam gas mining until we are sure it is a safe process.
