## **INQUIRY INTO COAL SEAM GAS**

**Name:** Mr Murdo Cadell

**Date received:** 7/09/2011

---

I here by submit the following: That there be no mining including coal seam gas extraction on agriculturally sensitive areas or anywhere that could affect underground water aquifers at the point of extraction or anywhere downstream. What we need in this country is a minister who is prepared to say no to mining companies if there is any risk of damaging food producing land and water. There is no point making a lot of rules and regulations for mining companies to abide by just so you feel good about yourself when you dont have the guts to say NO.
