## INQUIRY INTO COAL SEAM GAS

**Name:** Professor Saul Mordaunt

**Date received:** 6/09/2011

---

- Water is life. We live on a very dry continent. We must protect our water.
- A full moratorium on all forms of coal seam gas drilling until the environmental, social and health impacts have been rigorously and independently assessed.
- CSG exploration and mining to be made subject to all relevant environmental legislation, including the native vegetation and water management laws.
- The provision of standing to ensure that the community has full legal rights to challenge and enforce environmental laws under which CSG companies are operating.
- The provision of a right in the Petroleum (Onshore) Act to allow landholders to refuse consent for CSG exploration or production on their land.
- A prohibition on CSG exploration and mining in important bushland, valuable farmland, groundwater aquifers, all residential areas including rural residential areas and public lands.
- A requirement that all chemicals used in CSG drilling or fracking must be assessed by the chemical regulator for use for that purpose before being approved.
- We can mine csg safely. Lets independently and scientifically determine how this can be done, and then, and only then, proceed to mine for csg.
