INQUIRY INTO COAL SEAM GAS

Name: Ms Galigali Perkins

Date received: 13/09/2011

I strongly object to the coal seam gas industry because:

- * without pure water nothing can live & this industry will poison our water supply for a very long time

- * we need agricultural land to grow food & this industry will destroy the land

- * we need to harness natural non polluting energy sources if we are to leave anything for future generations

- * there have already been enough instances of people becoming sick who live near these csg sites to immediately call a halt to their operation

- * We need to look after the environment - it is already overburdened & all the innocent creatures that live in it need us to act in a morally responsible way not just turn it all into dollars for some fat cats' profit
