Subject:

Summary

I believe that the highway upgrade should follow the existing highway corridor and not use any additional land that is not already part of, or adjacent to the existing highway road reserve. This would minimise impact on a community already used to a busy highway along this route.

I realise this is not always possible where it is necessary to remove steep grades or tight corners, but with new technology a straighter route should be able to be achieved.

I do not object to tunnelling to achieve this.
