## **INQUIRY INTO COAL SEAM GAS**

**Name:** Ms Elizabeth Thorton

**Date received:** 1/09/2011

---

As we move deeper into the effects of Human Induced Climate Change I am concerned that we are not moving faster into Clean energy solutions. How can putting Australias' water at risk be in any way seen as a solution to the problem? Please divert all efforts away from possible environmental disasters and put the effort into Solar , a commodity which will be available far longer than any Fossil derived fuel

Thank you Liz Thornton
