INQUIRY INTO COAL SEAM GAS

Name: Mr Graham Warburton

Date received: 31/08/2011

The most important things to all humans, in fact all living things, is air, water and soil. Growth, profit, electricity and fuel are much lower on our needs scale.

If you are not sure how CSG will affect these most important things then do not allow CSG mining to go ahead any further.

If you are sure of the affect, then you should make your information public that there will be no damage, now and in the future to our water and soil (I am prepared to treat the air pollution from using gas as a separate issue for this enquiry).
