INQUIRY INTO COAL SEAM GAS

Name: Mr Jack Claff

Date received: 13/09/2011

People feel frightened, attacked and outraged when they learn how advanced the plans of the CSG industry are. The amount of land they've staked out is truly frightening. The inability for a landowner to say no means their land can be ruined. There is gas coming out of drinking water taps, the residents have become sick and developed cancers. The toxic chemicals destroy drinking water and pollute the land. Does any of this sound environmentally sane? Please stop the rush towards Coal Seam Gas mining. The gas isn't going anywhere very soon.
