I object to the Energy from Waste Incinerator proposed for Eastern Creek. I believe this is too close to residential land and it is not the best technology for waste disposal. I also don't want my family to be guinea pigs for something Australia has never tried before. If you must try it then do it 100kms from people's homes. The EPA and health authorities oppose it too. Why risk the health of Western Sydney? It is too close to our homes, our schools, our child care centres, our water supply. We don't want it in our backyard. No one deserves it in their backyard. Please listen to us. Look at best practice for waste disposal. This is not the solution. Thanks for listening.
