## **INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY**

**Name:** Mr Matthew Lamens

**Date received:** 17 May 2017

---

The Next Generation Energy from Waste proposal will return significant environmental and social benefits to the community.

1. Creating jobs
2. Diverting over 1 million tonnes of waste away from landfill
3. Creating enough electricity to power 200,000 homes
4. Eliminating 3 million tonnes of Greenhouse gas emissions per annum
- 5 A renewable energy source adopting World's best practices & best available technology

There is no single magic bullet to tackle the problem of waste. There are a range of processes that work together to provide a viable solution.

Thermal treatment will play an important role in an integrated waste system, contributing to a sustainable future for Australia

This is a unique opportunity for individuals, industry, consultants, councils and organisations generally to submit their views on all aspects of the waste industry whether good or bad.
