

INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY

Name: Name suppressed

Date received: 17 May 2017

Partially
Confidential

I totally oppose to the "incinerator" project. I would be against this toxic beast wherever it would be built and definitely against it being so close to home and even closer to our kids schools. We sacrificed a lot and we are still working really hard to own a house in Minchinbury because we wanted a safe and secure environment for our children. Living near "the largest incinerator" means we are loosing everything we worked hard for. Nothing so far guarantees that it will be safe enough to not affect our children's health and future! Our house value will depreciate and we cannot afford that financial loss! We cannot even afford moving away from Western Sydney! And why should we? It is our place, our home, our area and I think we need to decide what to do with our kids future not a greedy millionaire who sees \$ signs only. I am sure that in 2017, we can find hundreds of healthier, smarter ways to create energy while preserving the environment and mostly protecting people's health and lives! Why don't you use those millions of dollars that you want to invest in a project that would benefit all parties and not just a few on the expense of thousands of hard working families.
