I disagree with the incinerator proposed for Eastern Creek. I feel we are confronted with the rotting smell of disposal facilities we are surrounded by and have a very high incidence of asthma and respiratory conditions due to the amount of pollution in the area. The danger to our health that this proposal would create for the many thousands of residents should be considered very seriously. The smell produced from the nearby waste facilities in the area are extremely pungent and the high traffic volume produced from existing industrial sites are already creating enough pollution without adding an even greater danger to people's lives and well being with additional hazards and waste production.
