

INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY

Name: Name suppressed

Date received: 22 May 2017

Partially
Confidential

I am opposed to the energy to waste recycling facility to be built in Eastern Creek as the incinerator will produce a massive amount of pollution as well as to increase the number of vehicles and trucks on our local roads, transporting waste to and from the facility. The route to Eastern Creek is already blocked by trucks causing myself and others to be late for work. The area is already congested and overpopulated. Please consider a rural area away from civilisation as there is an already high level of a putrid smell that originates from the already established dump site in Eastern Creek.

Why double up with this outrageous plan. Move it far away from our suburbs or it could cause a new hybrid health plague. Cause and effect could create a series of health related lawsuit actions..

Please consider the environment.
