INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY

Name: Name suppressed

Date received: 23 May 2017

Partially
Confidential

I object to the building of the worlds largest energy-from-waste incinerator being built at Eastern Creek.

The area already has a waste disposal facility which makes the area and surrounds stink.

Driving in that area is unpleasant. On a hot day it is unbearable due to the stench which travels for kilometers..

I feel very sorry for the people that live and work in that area as it is truly unpleasant to look at and the smell is overbearing.

The area is second class due to the placement of the current waste disposal facility and another will make it a cesspool.

Please put it in an area that is outside of Sydney and away from houses, offices and parklands. There are plenty of locations outside of Sydney that can facilitate a new incinerator and people will travel to work there.

Thank you for reading this submission.

Please do not make the Western Suburbs any lower than it currently is.
