Partially  
Confidential

I am a resident of Minchinbury, my home is approximately 2km from the proposed site for the Incinerator.

I'm concerned of the environmental impact this project will cause to communities who live within close range of the site, there also seems to be no environmental and health audit or safety/risk assessment that will impact local residents? What information is given about the feedstock?

What exactly is the 20% of proposed fuel mix as described as "other"? There is no clear indication and no communication to the residents that will be effected by this project.

The Incinerator will be operating 24/7, burning waste (including the 20% unknown fuel mix) so exhaust fumes will contribute a negative impact on the air quality in Western Sydney.

I strongly oppose this project and it's in the wrong location to begin with as it is too close to nearby communities and residents.
