INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY

Name: Mr Richard Caruana

Date received: 24 May 2017

As a long term resident and citizen I find it difficult to understand that the Government may allow this ENERGY FROM WASTE INCINERATOR to go ahead in a populated area and within a basin that holds emissions from all sources to hover and stay within the lower Penrith and Western suburbs.

My son and many other families are having difficulty with air pollution (Asthmatic) and given the government continually complain about have to fund health issues you are as I see it shooting yourself in the foot, but then I guess that's the narrow mindedness that reside within our government.

Put it in the outback where there is a need for particles to linger and thus possibly bring rain to the area that could help the drought areas and bring employment to those struggling regions which could then also stop people from being on the dole and receiving government benefits.
