INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY

Name: Ms Margaret Flynn

Date received: 22 May 2017

I object to the energy-from-waste incinerator to be built at eastern creek for many reasons, air quality and human health impacts are just a couple of reasons why it should not be built there, also "The proposal to build and operate an incinerator within city limits is not consistent with over 100 years of environmental regulation to improve urban air quality, I would also like to state that "With thousands of trucks delivering over a million tonnes of waste to be burnt each year, there is no certainty about what chemicals and particles will come out of the exhaust stacks – which is why the EPA and NSW Health object to this proposal,

Kind regards,

Margaret Flynn.
