Partially  
Confidential

This incinerator is only required in overseas countries which have minimum land to use for landfill, however this is not the case over here as there is plenty of land around elsewhere that can be used for waste disposal. So to all the MP's , councilors and anyone else involved in this issue , had better think twice about even thinking of going ahead with project as you will pay for it at the election booth . You wouldn't want this this in your own area so why try and put in in ours ? If the project is such a great idea, why are any of the other states of australia , planning to do the same ? Federal government is building an airport at near by badgery's creek , what a pleasant site it will be for foreign tourists to see as they fly into a lovely new airport, but a massive tower spewing toxic pollution into the air and all over neighboring houses and into the lungs of our children and grandchildren ! What a fantastic way to promote your wonderful city to the rest of the world ! You guys really know your stuff ! Keep lining your pockets with dirty corruption money from the big developer's , cause at the end of the day that's what really matters ! Forget about the incinerator making me sick , you guys are already doing a good job of that . you guy's may be good at lying , but the ballot box won't lie at the next election.
