INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY

Name: Name suppressed

Date received: 26 May 2017

Partially
Confidential

I feel that there is not enough evidence saying that the smoke from the incinerator won't be harmful to the communities surrounding it. It won't be realised how harmful it is until years down the track, but the affect may be irreversible.

Why is it being built next door to Sydney's fastest growing suburb Blacktown? I understand the travel and environmental costs for moving the the rubbish to another location, but with how much space there is on the outskirts of Sydney why can't it be built there where the population is lower or none at all.

It feel that this is a rushed quick fix without the long term affects being considered. Without the consideration for the future of Sydney and it's residence. It is being built for the now but not the future. Just like all the motorways, instead of building motorways that can handle double the population they are built for the current population then as soon as it is complete nothing has changed due to the population growth.

Please reconsider building this incinerator in Eastern Creek and how it will affect the view of Sydney. Especially form the blue mountains the City will not be visible at all.
