

INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY

Name: Name suppressed

Date received: 26 May 2017

Partially
Confidential

I have recently received literature from Chris Bowen MP Federal Member for McMahon (he is my federal local member) who has advised that there is a proposal to build the world's largest incinerator in the Eastern Creek area. I wish to lodge my objection to having this facility built in Eastern Creek. This facility will produce massive amounts of pollution and with that comes foul odors. I (and other residents in Erskine Park and St Clair) already have to put up with the nearby waste disposal facility and the almost daily foul odors they cause. On these days I have to remove any washing that I have on the clothes line and keep myself inside with all my windows closed until the odor dispurses. Whilst I have complained to the EPA many times about these odors, nothing has been done and from what I have read recently in a local newspaper, the EPA cannot do anything which seems ridiculous. I strongly suggest that you urge those wishing to build this incinerator somewhere else, preferably somewhere out in the bush and a long way from residential areas.
