Confidential

I strongly oppose the building of the energy-from-waster incinerator at Eastern Creek. The incinerator will produce a massive amount of pollution, as well as increase the number of vehicles on our local roads. Building an incinerator within a few kms of schools and homes will worsen things for our community. Western Sydney residents are not second-class citizens. We are all entitled to breathe clean air. It isn't fair that Eastern Creek will become a dumping ground for NSW's problems. Residents risk developing breathing problems and major lung problems by breathing in polluted air. Please, we do not need bad odours around our homes, in our streets and in our playgrounds where our children and grandchildren play. We are all entitled to enjoy freely our beautiful surrounds without inhaling polluted air. Thank you.
