INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY

Name: Mrs Anita Lazaro

Date received: 28 May 2017

I live in St Clair and have a young family. We already live in a day and age where we are exposed to too many pollutants and we are about to have an incinerator added to this. In St Clair alone there is about 6 primary schools and they're going to be exposed to this, aren't we already exposed to enough? We already live near a tip that gives off disgusting odours that can't be contained no matter how much they try. A airport that is going to add more pollution and noise and now a incinerator. It seems that we are considered the dumping ground around here. Please for everyone's health, don't do this
