INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY

Name: Name suppressed

Date received: 28 May 2017

Partially
Confidential

I would like to offer a submission opposing this development. It seem a crazy idea to allow a new technology which will impact air quality so close to residential areas (including primary schools) & close to the Prospect Reservoir/ Additionally, the two proposed chimneys will be a hazard to helicopters that use the M4 corridor for navigation & to aircraft in the future once Badgerys Creek airport is operational.

There are already reports indicating the air quality will suffer as a consequence, & will then spread far & wide across the Sydney basin. The intended waste is so varied, that almost nothing can be ruled out, & if waste is accepted from unscrupulous contractors, who knows what will end up passing through the process. Without very close scrutiny, & severe punishment & compensation values put in place on the owners & operators, for any breaches, I think this should be thrown out!
