## **INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY**

**Name:** Mr Erkan Mentesh

**Date received:** 27 May 2017

---

Based on research not only will there be a lot of pollution released into the air but we cannot control what is being burnt (ie Asbestos, Plastics, chemicals, paints dead animals or people). A facility like this should not be owned privately and run by a single individual and should definitely be at least 100km from away from a populated suburbs.

There will be a reduction in recycled material and state revenue.

There are way to many negatives, Please disallow for the sake of the communities health and wellbeing..
