INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY

Name: Name suppressed

Date received: 27 May 2017

Partially
Confidential

I am strongly against any incinerators being built in this area. I believe such construction should be far away from any population. My concerns are health factors. I have read how plants like these make air pollution. It will affect our health and our children's health. It will pollute Prospect water plant.

I also believe it will drop the value of our properties.

The rubbish tips were built and they said the smell will be under control but it's not. Most of the time we can smell it. Now same with the incinerator

They say it has no health issues. How can it not. All they care is about the money they will make. And if our government allows such thing, we all know they are bought out to. The government should be putting the public's interest and health first.
