INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY

Name: Name suppressed

Date received: 28 May 2017

Partially
Confidential

The construction of this incinerator facility in an urban environment that will affect 1000,s of people , including children, is Ludicrous,

The toxic waste that will be generated, is bound to affect the health of locals, thereby ensuring the extra strain on our already overworked and underfunded medical facilities.

If the government is serious about looking after its citizens health and well being, over the almightyDollar, then this proposal, with the help of our government, will not get past its infancy,..

Regards
