## **INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY**

**Name:** Mr Peter Ferns

**Date received:** 29 May 2017

---

How can we even be thinking about such an idea when all we are doing is polluting the sky. There is already too much pollution in the air in Sydney and overseas these things are being condemned and decommissioned (see files attached).

We need to encourage the use of biodegradable plastics and using paper bags for taking home vegetable in the shopping. Ban plastic bottles. Do not use polystyrene for packaging (tax it out of use). Get schools to recycle chip wrappers and cling film. Try all of this but never burn the waste the evidence is so against this technology. Only those who will profit from it will support it.
