INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY

Name: Mr Robert Fung

Date received: 31 May 2017

We live in Western Sydney for over a decade now, and I used to drive to work via M4 to the City for 7 years passing Easter Creek, having experienced already heavy `dead-rat` smells over the road at times. Certainly we don't want more waste-management facilities as such around our neighbourhood, as it will be impacting on more and more people living in greater Western Sydney these days.

Please ask the politicians to find a comparatively remote area bit far from populated Sydney urban areas to build it. Alternatively our environmental scientists should be able to provide some more viable and cleaner solutions to issues as such for the community and public good that a responsible government has to deliver as first priority.
