INQUIRY INTO 'ENERGY FROM WASTE' TECHNOLOGY

Organisation: Glenwood Community Association

Date received: 6 September 2017

Air quality in western Sydney is already poor, this would decrease air quality even further.

We need solar panels and wind farms, not this kind of "Innovation".

Western Sydney is a highly populated area, an incinerator is not a good idea here.

I suspect corruption at various levels of government have allowed this to progress this far. Please show that NSW government votes can't be bought, and shut this idea down.
