**INQUIRY INTO ELECTRICITY SUPPLY, DEMAND AND
PRICES IN NEW SOUTH WALES**

Name: Mr Brendan Diacono

Date received: 16 October 2017

On peak demand days energy wholesalers make \$1000s /kWh on provision of power to the grid. Many wholesalers obtain some of that energy from domestic solar installation and pay the standard rate of \$0.128 kWh. A massive rip off to domestic suppliers.

Intervention is required to:

Return a fair price on high demand days to domestic suppliers;

Inject competition between wholesale suppliers for the energy produced by domestic suppliers.

Encourage greater uptake of domestic solar and in doing so, reduce demand on the grid.
