**INQUIRY INTO ELECTRICITY SUPPLY, DEMAND AND
PRICES IN NEW SOUTH WALES**

Name: Mr Des Hooler

Date received: 16 October 2017

There would be enough power for everyone if our governments made significant efforts to assist households to install solar and battery systems even with small generators so they could go OFF GRID to allow all the power stations to service businesses . This also would give more time to convert to renewables and forget building coal stations .

We have most of our population around the coast and there are very efficient wave generators already available . Also salt water batteries could be charged by solar and wave generators .

Why are these suggestions so hard to consider ?

Please stop destroying our beautiful country now .

Thank you Des Hooler
