**INQUIRY INTO ELECTRICITY SUPPLY, DEMAND AND
PRICES IN NEW SOUTH WALES**

Name: Mr Stephen Ticehurst

Date received: 16 October 2017

Solar power produced on people's roofs should be sold at a fair price. This should be consistent with the price the electricity company then sells it back to us. It should reflect that roof top solar is reducing the need for carbon emitting large power stations and the associated capital costs. It should reflect that it is geographically spread to allow for the grid to utilise different area generated electricity at different times. It should reflect that such electricity can be integrated with state of the art demand management schemes. It should reflect that it helps the government keep its Paris commitments.
