**INQUIRY INTO ELECTRICITY SUPPLY, DEMAND AND
PRICES IN NEW SOUTH WALES**

Name: Mr Patrick Attard

Date received: 16 October 2017

My family has invested in solar PV to support our state and our country in reducing carbon emissions and so meet our Paris agreement obligations. As part of the solar and wind community, we are removing the state's need for building energy generators that rely on polluting and non-renewable fossil fuels.

As such, we expect our state to support our commitment to clean and renewable energy by legislating a fair price for solar pv generation for citizens who have invested in our future and at the same time reduced pollution that causes respiratory health hazards and enabling a profitable and innovative industry to be created through the development, design and installation of solar pv on residential and industrial rooftops.
